First Overland - Tim Slessor 2016-03-07

Why Not? After all, no-one had ever done it before. It would be one of the longest of all overland journeys - half way round the world, from the English Channel to Singapore. They knew that several expeditions had already tried it. Some had got as far as the deserts of Persia; a few had even reached the plains of India. But no one had managed to go on from there: over the jungle clad mountains of Assam and across northern Burma to Thailand and Malaya. Over the last 3,000 miles it seemed there were 'just too many rivers and too few roads'. But no-one really knew ... In fact, their problems began much earlier than that. As mere undergraduates, they had no money, no cars, nothing. But with a cool audacity, which was to become characteristic, they set to work - wheedling and cajoling. First, they coaxed the BBC to come up with some film for a possible TV series. They then gently persuaded the manufacturers to lend them two factory-fresh Land Rovers. A publisher was even sweet-talked into giving them an advance on a book. By the time they were ready to go, their sponsors (more than 80 of them) ranged from whiskey distillers to the makers of collapsible buckets. In late 1955, they set off. Seven months and 12,000 miles later, two very weary Land Rovers, escorted by police outriders, rolled into Singapore - to flash bulbs and champagne. Now, fifty years on, their book, 'First Overland', is republished - with a foreword by Sir David Attenborough. After all, it was he who gave them that film.

Support to High Intensity Operations - Great Britain. National Audit Office 2009

The provision of support for troops in Iraq and Afghanistan is made more difficult because they operate in remote locations and harsh conditions. Despite the challenging operational environments, the Ministry of Defence (MOD) has successfully delivered around 300,000 personnel and 90,000 tonnes of freight to Iraq and Afghanistan over the last two years. However, it has not consistently met its targets for delivering supplies in a timely fashion. The MOD is taking measures to improve the effectiveness of its supply chain; and the amount of time a unit waits for items to be delivered has reduced by half in Afghanistan and a third in Iraq. £4.2 billion has been approved to upgrade or buy new equipment to meet urgent requirements in the two theatres. The NAO found that the availability of this equipment has generally met or exceeded targets, though there have been spares shortages with some fleets particularly when the vehicle is used for a different purpose than intended. The availability and serviceability of helicopters has exceeded MOD targets, although prioritisation of spare parts for operations has led to reduced availability in the UK. There are also shortages of equipment for Service personnel in the UK to train with, prior to deployment overseas. Accommodation, medical and welfare services to Service personnel on operations are generally satisfactory although provision at the smaller patrol bases is more basic. The helicopter borne Medical Emergency Response Teams provide quick, life-saving medical support to casualties and evacuate them speedily to hospital.

Since 1989, the Discovery has gone through several iterations, but its essential qualities have remained unchanged. [They Found Our Engineer](#) - Michael Bishop 2011

The British Land Rover 4x4 has grown from 1948 to become one of the world's leading automotive brands. Exactly how it all came together back in the late 1940's and early 50's has been the topic of interest and debate for many years. This was until two Australian enthusiasts, Michael Bishop and Alex Massey quite literally stumbled across senior member of the original Land Rover development team, Arthur Goddard living in Brisbane, Australia in 2009. The discovery led to many of the myths and tales surrounding the early vehicles to be heard as it happened from Arthur's point of view. Then to a trip by Arthur to visit his old work place in Solihull and to the vehicle that he helped bring to life back in 1948. The book contains both a technical and human side to this incredible story as well as a great reunion between Arthur and his old colleague Spen King who went onto design the Range Rover in the 1960's. This is truly a unique story from the time of post War World two Britain to modern day Australia and how the iconic 4x4 grew up so quickly in the 1950's to become the world leader that it is today.

Jue 477 - Martin Port 2020-09

Revealed to the world in 1948, the Land-Rover not only revived the Rover Company's fortunes in an austerity-riddled post-war period, but galvanized its future, thanks to the model's almost immediate success. With the manufacture of an initial 48 'pre-production' examples coming to a close, the first official production models were assembled - starting with chassis 860001. As original factory records prove, this pivotal vehicle was destined for His Royal Highness King George VI, but the decision was made to postpone the presentation and instead, 'number one' was retained by the factory until 1950, when it was registered JUE 477 before leaving Rover Company ownership. After decades left out in the cold and exposed to the elements, 860001 had certainly seen better days, but thanks to the determination of Sir Jim Ratcliffe, founder and Chairman of INEOS, the future of JUE 477 was secured in 2017. Over the next two years, a dedicated team of experts, led by chief restorer, Julian Shoolheifer set about restoring the vehicle while retaining as much of its original DNA as was physically, and safely, possible and making sure that this remarkable vehicle's history and past life was still worn with pride.
