Building Safer Healthcare Systems - Peter Spurgeon 2019-08-21

This book offers a new, practical approach to healthcare reform. Departing from the priorities applied in traditional approaches, it instead assesses - both theoretically and practically - the successful lessons learned in other safety-critical industries, and applies them to healthcare settings. The authors focus on the importance of human factors and performance measures to establish proactive, systematic methods for healthcare system design. This approach helps to identify potential hazards before accidents occur, enhancing patient safety. In addition, the book details the new approach on the basis of real-world applications in the NHS and insights from NHS staff. Case studies and results are presented, demonstrating the significant improvements that can be achieved in risk reduction and safety culture. Lastly, the book outlines what steps healthcare organisations need to take in order to

successfully adopt this new approach. The approach and experiential learning is brought together through the development of a new holistic patient safety education syllabus.

Human Error in Aviation - R.Key Dismukes
2017-07-05

Most aviation accidents are attributed to human error, pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective: The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

Preventing Fatal Incidents in School and Youth Group Camps and Excursions - Andrew Brookes
2018-05-07

This book approaches the prevention of fatal incidents in outdoor education and related fields through detailed study of past tragedies. Although safety in many fields is built on accumulated lessons from past incidents, tragedies on school or youth group camps and excursions are so infrequent and so widely scattered that knowledge from previous incidents can elude those who would benefit. Nevertheless, the emergence of unlearned lessons from the past weighs heavily when those affected by a tragedy judge whether an incident should have been prevented. This book provides a foundation for a detailed and comprehensive understanding of fatality prevention in outdoor education, and in youth camps and excursions. It compiles, examines, and analyses information on

fatal incidents that have occurred over many decades, involving many kinds of groups and endeavours, from around the globe. No previous work has attempted this task.

Disaster Operations and Decision Making -

Roger C. Huder 2013-01-22

The only book to combine emergency management principles with proven military concepts. Good disaster plans do not guarantee a good response. Any disaster plan rarely survives

the first rain bands of a hurricane or the first tremors of an earthquake. While developing plans is essential, there must be systems in place to adapt these plans to the ever-changing operational environment of a disaster. Currently there is no set of standard disaster response principles to guide a community. The National Incident Management System (NIMS) and the Incident Command System (ICS) provide the framework to implement operational decisions, but they were never designed as operational concepts. The military has developed just such concepts and many of them can be adapted for civilian use. Disaster Operations and Decision Making adapts those military concepts and combines them with disaster lessons learned to create a new operational paradigm.

Emphasizing team building, Emergency Operations Center operational systems, and situational awareness, the book details easily adopted methods. All of these methods are designed to be incorporated into the NIMS and

ICS framework to enhance a community's response to any type of disaster. Disaster Operations and Decision Making is an essential resource for emergency managers, fire chiefs, law enforcement officers, homeland security professionals, public health officials, and anyone else involved or interested in crisis management.

Ethics and Business - Paul C. Godfrey

2022-01-06

Ethics & Business: An Integrated Approach for Business and Personal Success gives students the practical knowledge and skills to identify ethical dilemmas, understand ethical behavior in themselves and others, and advocate for ethical

behavior within their organization. The course focuses on three ethical questions: the individual, the organization, and the societal perspective. These questions and views explore different areas of business ethics, such as the use and abuse of power, challenges to honesty and integrity, and participation in ethical interventions such as reporting, repair, forgiveness, and reconciliation. Most business ethics courses are based on a single point of view. Depending on the viewpoint, this might be based on philosophical theory, organizational behavior, or a legal and regulatory compliance approach. As an author team, we combine and integrate these points of view into a unified whole by incorporating unique content, original videos, and adaptable case studies to assist students in making ethical decisions in their professional and personal lives.

Keeping Patients Safe - Institute of Medicine
2004-03-27

Building on the revolutionary Institute of Medicine reports *To Err is Human* and *Crossing the Quality Chasm*, *Keeping Patients Safe* lays out guidelines for improving patient safety by changing nurses' working conditions and demands. Licensed nurses and unlicensed nursing assistants are critical participants in our national effort to protect patients from health

care errors. The nature of the activities nurses typically perform " monitoring patients, educating home caretakers, performing treatments, and rescuing patients who are in crisis " provides an indispensable resource in detecting and remedying error-producing defects in the U.S. health care system. During the past two decades, substantial changes have been made in the organization and delivery of health care " and consequently in the job description and work environment of nurses. As patients are increasingly cared for as outpatients, nurses in hospitals and nursing homes deal with greater severity of illness. Problems in management practices, employee deployment, work and workspace design, and the basic safety culture of health care organizations place patients at further risk. This newest edition in the groundbreaking Institute of Medicine *Quality Chasm* series discusses the key aspects of the work environment for nurses and reviews the potential improvements in

working conditions that are likely to have an impact on patient safety.

Making a Real Killing - Len Ackland 2002

p>Just as huge nuclear explosions result from small spheres of plutonium, the story of the Rocky Flats nuclear weapons plant near Denver, Colorado is much larger than itself. It is about the Church family, who came West seeking gold in 1861, stayed to raise cattle, watched the federal government take a large piece of its land for the weapons plant in 1951--and now is busily developing real estate in the booming suburbs next to the contaminated plant site. It is about the government and private corporations that produced the deadliest devices in history for thirty-seven years, concealed problems behind the wall of national security secrecy, and came close to a Chernobyl-scale disaster during a 1969 fire. It is about plant managers who cut corners to maintain weapons production, workers who saw themselves as loyal Cold War soldiers, and citizen activists who challenged the

plant's very existence. And it is about a community that profited from thousands of jobs and contracts but now faces long-term environmental and health risks. *Making a Real Killing* examines the way Americans participated in building a nuclear weapons arsenal capable of destroying the human species. To read it is to learn some sobering lessons, including the fact that the democratic process lagged decades behind technological developments. As Americans reckon with the legacy of the Cold War, *Making a Real Killing* deserves a place at the center of our attention. Len Ackland's integrity and hard work remind us how crucial energetic journalism is for a successful democracy.--Patricia Nelson Limerick
[Textbook of Patient Safety and Clinical Risk Management](#) - Liam Donaldson 2020-12-14
Implementing safety practices in healthcare saves lives and improves the quality of care: it is therefore vital to apply good clinical practices, such as the WHO surgical checklist, to adopt the

most appropriate measures for the prevention of assistance-related risks, and to identify the potential ones using tools such as reporting & learning systems. The culture of safety in the care environment and of human factors influencing it should be developed from the beginning of medical studies and in the first years of professional practice, in order to have the maximum impact on clinicians' and nurses' behavior. Medical errors tend to vary with the level of proficiency and experience, and this must be taken into account in adverse events prevention. Human factors assume a decisive importance in resilient organizations, and an understanding of risk control and containment is fundamental for all medical and surgical specialties. This open access book offers recommendations and examples of how to improve patient safety by changing practices, introducing organizational and technological innovations, and creating effective, patient-centered, timely, efficient, and equitable care

systems, in order to spread the quality and patient safety culture among the new generation of healthcare professionals, and is intended for residents and young professionals in different clinical specialties.

Crisis Negotiations - Michael J. McMains
2020-07-16

Crisis Negotiations: Managing Critical Incidents and Hostage Situations in Law Enforcement and Corrections, the sixth edition, is an invaluable resource for mitigating, managing, or responding to high risk negotiation incidents. This revision includes the current research on negotiating high-risk incidents in the classroom and the field. It includes an applied analysis of the value of psychopathology to high-risk perpetrators. It refines the "empirical eclecticism" introduced in the fourth edition to provide a conceptual basis for crisis negotiations. The authors include summary bullet points at the end of each chapter for easy reference when negotiators are in the field and a

review of the literature since the last edition appeared. Their discussion of the strategic planning process involved in high-risk negotiation incidents focuses clearly on the critical questions negotiators need to ask themselves about any high-risk incident and provides a practical approach to the psychology of individuals that engage in high-risk incidents. Known as "the bible" to experienced professionals in the field, this sixth edition of Crisis Negotiations is vital for practitioners as well as for criminology, criminal justice or psychology courses in crisis management, applied psychology, and special operations in law enforcement and corrections. Instructors will find it well supported by ancillary materials including discussion questions, slide presentations, and a test bank, as well as case studies and self-assessment quizzes for students, making it easy to develop a first-time course or to integrate it into an existing course.

Stress, Trauma, and Decision-Making for Social Workers - Cheryl Regehr 2018-10-30

Social workers regularly make high-risk, high-impact decisions: determining that a child has been abused; that an individual may take their own life; or that someone with a history of violence poses harm to another. In the course of this work, social workers are exposed to acute and prolonged workplace trauma and stress that may result in posttraumatic stress, compassion fatigue, and burnout. These effects not only impact practitioners, but also the decisions that social workers make and ultimately the quality of the services that they provide. In this book, Cheryl Regehr explores the intersection between workplace stress, trauma exposure, and professional decision-making in social workers. She weaves together practice experience, research on the impact of stress and trauma on performance and decision-making in other high-risk professions including paramedics and police officers, and the empirical study of competence

and decision-making in social work practice. Covering a wide range of research and theory, she surveys practical approaches to reducing stress and trauma exposure, mitigating their effects in social work practice, and improving decision-making. This book is critical reading for all social workers who engage in high-stakes decision-making, from those newly embarking on a career to expert practitioners.

Making Capitalism Safe - Donald Wayne Rogers 2009

Workplaces in the United States are safer today than they were a hundred and twenty years ago. In this book, Donald W. Rogers attributes this improvement partly to the development in the Progressive Era of surprisingly strong state-level work safety and health regulatory agencies, a patchwork of commissions and labor departments that advanced safety law from common-law negligence to the modern system of administrative regulation. Rogers examines the

Wisconsin Industrial Commission and compares it to arrangements in Ohio, California, New York, Illinois, and Alabama. Connecting this history to the creation of the Occupational Safety and Health Administration in 1970, *Making Capitalism Safe* will revise historical understandings of state regulation, compensation insurance, and labor law politics-- issues that remain pressing in our time.
