**Tc 7-100.2 Opposing Force Tactics** - Headquarters Department of the Army 2017-09-09  
This training circular (TC) is one of a series that describes an opposing force (OPFOR) for training U.S. Army commanders, staffs, and units. See the References section for a list of other TCs in this series. (Other publications in the former Field Manual [FM] 7-100 series will be converted to TCs as well.) Together, these TCs outline an OPFOR than can cover the entire spectrum of military and paramilitary capabilities against which the Army must train to ensure success in any future conflict. Applications for this series of TCs include field training, training simulations, and classroom instruction throughout the Army. All Army training venues should use an OPFOR based on these TCs, except when mission rehearsal or contingency training requires maximum fidelity to a specific country-based threat or enemy. Even in the latter case, trainers should use appropriate parts of the OPFOR TCs to fill information gaps in a manner consistent with what they do know about a specific threat or enemy.

**Surgery During Natural Disasters, Combat, Terrorist Attacks, and Crisis Situations** - COL Robert B. Lim 2015-12-11

The lessons from this book help surgeons prepare for emergency events that require disaster preparedness usually handled by the United States military, including chemical attacks and massive casualty events. Written by experts in the field perspectives that come from various combat zones and disaster sites, this book highlights the pitfalls to avoid, the organization that is essential for success, and the tips to help perform surgery in the most austere conditions . The book will address situations where surgeons may have to operate on wanted criminals, operate wearing chemical protective equipment, operate in a collapsed building, or even remove an unexploded device. The book includes cases from the battlefield that are designed to guide surgeons facing these scenarios in the civilian world. There are also chapters detailing the lessons learned from the Boston Marathon Bombing, airline disasters, and the Oklahoma City bombing. Unlike any other current text, Surgery During Natural Disasters, Combat, Terrorist Attacks, and Crisis Situations is an excellent resource for all surgeons who might be faced with these events.

*Weapon Systems Handbook* - 2020-05-03

July 2019 Printed in BLACK AND WHITE The Army's Weapon Systems Handbook was updated in July 2019, but is still titled "Weapon Systems Handbook 2018." We are printing this in black and white to keep the price low. It presents many of the acquisition programs currently fielded or in development. The U.S. Army Acquisition Corps, with its 36,000 professionals, bears a unique responsibility for the oversight and systems management of the Army's acquisition lifecycle. With responsibility for hundreds of acquisition programs, civilian and military professionals collectively oversee research, development and acquisition activities totaling more than \$20 billion in Fiscal Year 2016 alone. Why buy a book you can download for free? We print this so you don't have to. We at 4th Watch Publishing are former government employees, so we know how government employees actually use the standards. When a new standard is released, somebody has to

print it, punch holes and put it in a 3-ring binder. While this is not a big deal for a 5 or 10-page document, many DoD documents are over 400 pages and printing a large document is a time- consuming effort. So, a person that's paid \$25 an hour is spending hours simply printing out the tools needed to do the job. That's time that could be better spent doing mission. We publish these documents so you can focus on what you are there for. It's much more cost-effective to just order the latest version from Amazon.com. From the New York Times bestselling authors of In the Company of Heroes comes a thrilling account of military aviation for history buffs and "for those who love vivid tales of battlefield heroics" (Publishers Weekly). In the world of covert warfare, Special Operations pilots are notoriously close-lipped about what they do. They don't talk about their missions to anyone outside their small community. But now, Michael J. Durant and Steven Hartov shed fascinating light on the mysterious elite commandos known as SOAR (Special Operations Aviation Regiment) and take readers into a shadowy world of combat they have only imagined.

**Battleworn** - Chantelle Taylor 2016-10-26

Gritty, harrowing and full of courage, a testimony to the men and woman from the council estates of Britain who lived and died in the longest campaign the British Army has fought in decades a must read for any politician. AR retired Warrant Officer 1st Class 22 SAS Chantelle Taylor joined the British Army in 1998 as a combat medical technician. Ten years later she made history, becoming the first female soldier to kill a Taliban fighter in close-quarter combat while on patrol in Helmand Province, Afghanistan. In Battleworn, she tells the story of B Company, a beleaguered group of individuals who fought relentlessly to hold Nad-e Ali, a dusty, sweltering hellhole surrounded by the Taliban. A routine patrol into an area saturated with enemy fighters escalates into a seven-week siege. Facing the possibility of death daily, Taylor writes of gun battles and perilous patrols, culminating in the extraction of more than sixty-six casualties with four killed in action. A powerful story written with a humility that captures the sometimes impalpable humour of soldiers at war, Battleworn provides a testament to combat medics all over the world. It highlights the crucial role that they play in today's 360-degree battlefield.

[Survive--The Economic Collapse](#) - Piero San Giorgio 2021-12-03

"A valuable cram course in how to survive the rest of your life." - James Howard Kunstler. Author of *The Long Emergency*, *Too Much Magic*, *The Geography of Nowhere*, and *The World Made By Hand* For billions of people, the ongoing economic crisis has marked the end of the world as we know it. The "American Dream" (and ones like it) of a guaranteed job, a home, and a pension, has given way to the nightmare of unemployment, unpayable debt, depression, and uncertainty. In *Survive The Economic Collapse*, Piero San Giorgio looks behind the headlines and sound bites and demonstrates that today's economic crisis is no temporary "downturn," nor is it simply the result of bad policies. The crisis is the beginning of the end of a global paradigm when expectations of endless economic growth and progress crash up against the reality of scarcity and limited resources. The implications of the collapse cannot be ignored: a steep decline in living standards due to the evaporation of easy credit; a new political landscape that might inspire nationalism, geopolitical reshuffling, and wars over resources; and, potentially, a reduction in global population. No mere doom-sayer, San Giorgio explains not just how to understand the crisis but overcome it to foster a resilient community, stay healthy, and become self-sufficient and productive in the "interesting times" that lie ahead. Packed with tactical information and resources, *Survive* is nothing less than a field manual for the apocalypse. This edition has been thoroughly reedited and includes an extensive postscript detailing global developments in the past decade.

[Ranger Medic Handbook](#) - U S Department of Defense 2017-05-17

Historically in warfare, the majority of all combat deaths have occurred prior to a casualty ever receiving advanced trauma management. The execution of the Ranger mission profile in the Global War on Terrorism and our legacy tasks undoubtedly will increase the number of lethal wounds. Ranger leaders can significantly reduce the number of Rangers who die of wounds sustained in combat by simply targeting optimal medical capability in close proximity to the point of wounding. Directing casualty response management and evacuation is a Ranger leader task; ensuring technical medical competence is a Ranger Medic task. A solid foundation has been built for Ranger leaders and medics to be successful in managing casualties in a combat environment. The true success of the Ranger Medical Team will be defined by its ability to complete the mission and greatly reduce preventable combat death. Rangers value honor and reputation more than their lives, and as such will attempt to lay down their own lives in defense of their comrades. The Ranger Medic will do no less.

[Phtls: Prehospital Trauma Life Support, Military Edition](#) - Naemt 2019-07-29

PHTLS: Prehospital Trauma Life Support, Military Edition consists of the PHTLS core content and features thirteen chapters written by military prehospital trauma care experts for practitioners in the military environment. PHTLS: Prehospital Trauma Life Support, Military Edition is created in partnership between the National Association of Emergency Medical Technicians (NAEMT) and the Committee on Tactical Combat Casualty Care (C-TCCC). Since 1996, TCCC has improved the care rendered in combat prehospital environments. TCCC is the battlefield prehospital component of the Joint Trauma System, an organization within the United States Department of Defense that projects combat trauma care out to the point of injury and continues that care seamlessly while bringing the casualty home for recuperation and rehabilitation. TCCC guidelines are continuously revised and updated by C-TCCC, an all-volunteer group of military medicine and trauma care specialists. The membership of C-TCCC includes combat medics, corpsmen, and pararescuemen as well as physicians and physician assistants.

**Tactical Combat Casualty Care Handbook** - United States Army 2017-05-17

Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility. Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this area and, at the onset of hostilities, most combat medics, corpsmen, and pararescue personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC

was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities

This book details the current state-of-the-art in scientific, biomedical, and technical information concerning the effects of military lasers on the human body. An important purpose of this book is to identify current knowledge gaps in the various areas of this interdisciplinary field, and to offer specific recommendations for laser safety research and development into the future"--
