Equity in Discourse for  
Mathematics Education - Beth  
Herbel-Eisenmann 2011-12-09  
This book explores the

connection between the ways people speak in mathematics classrooms and their opportunities to learn mathematics. The words spoken, heard, written and read in mathematics classrooms shape students' sense of what mathematics is and of what people can do with mathematics. The authors employ multiple perspectives to consider the means for transformative action with respect to increasing opportunities for traditionally marginalized students to form mathematical identities that resonate with their cultural, social, linguistic, and political beings.

*Mathematical Problem Solving*

- Peter Liljedahl 2019-02-12  
This book contributes to the field of mathematical problem solving by exploring current themes, trends and research perspectives. It does so by

addressing five broad and related dimensions: problem solving heuristics, problem solving and technology, inquiry and problem posing in mathematics education, assessment of and through problem solving, and the problem solving environment. Mathematical problem solving has long been recognized as an important aspect of mathematics, teaching mathematics, and learning mathematics. It has influenced mathematics curricula around the world, with calls for the teaching of problem solving as well as the teaching of mathematics through problem solving. And as such, it has been of interest to mathematics education researchers for as long as the field has existed. Research in this area has generally aimed at understanding and relating the processes involved in solving problems to students' development of mathematical knowledge and problem solving skills. The accumulated knowledge and field developments have included

conceptual frameworks for characterizing learners' success in problem solving activities, cognitive, metacognitive, social and affective analysis, curriculum proposals, and ways to promote problem solving approaches.

Innovative Strategies for Accelerated Human Resources Development in South Asia - Asian Development Bank 2017-12-01

Assessment of student learning outcomes (ASLO) is one of the key activities in teaching and learning. It serves as the source of information in determining the quality of education at the classroom and national levels. Results from any assessment have an influence on decision making, on policy development related to improving individual student achievement, and to ensure the equity and quality of an education system. ASLO provides teachers and school heads with information for making decisions regarding a students' progress. The information allows teachers and school heads to understand

a students' performance better. This report reviews ASLO in three South Asian countries--- Bangladesh, Nepal, and Sri Lanka---with a focus on public examinations, national assessment, school-based assessment, and classroom assessment practiced in these countries.

Marking Matric - Vijay Reddy 2006

The past ten years in South Africa has seen many changes in education - the creation of a single department of education; common examinations for all learners in public schools in the country, a new outcomes based education curriculum which was introduced to learners in the general education and training phase since 1998 and will be introduced to the further education and training phase from 2006. To evaluate the success of these changes South African researchers still use

the indicator of student achievement. The matriculation examination is the visible, high profile and public performance indicator. Every year parents, learners, teachers, researchers, government officials, policymakers, and the general public get involved in the debate around the matric examination with the most frequently asked questions being - Did the pass rate go up? Are standards dropping? Are the results real or have they been manipulated? How is our education system doing? Are we meeting the development goals? What should the matriculation examination of the future look like? participants from government (national and provincial),

*Governing by Numbers -*

Stephen J. Ball 2018-10-11  
Social science researchers have become increasingly attentive to the role of numbers in contemporary life. Issues around big data, national test results, and output and performance statistics are now routinely reported and debated in the media. Numbers are a powerful resource for governments as a means to manage and 'improve' their populations, and we are increasingly represented, organized and driven by an economy of numbers, which inserts itself into more and more aspects of our lives. This book critically addresses some of the ways in which numbers are deployed in educational governance and practice, and some of the consequences of this deployment for what it means to be educated, to teach, and to learn. Recognising that numbers do not simply represent, but that they change things and have real effects, allows us to move beyond a system where difficult and important issues about what we want from

education and from teachers are side-stepped in the push to 'improve our numbers'. This collection offers a set of starting points from which we might speak back to numbers, drawing on research to explore how numbers change the way we think about ourselves and what we do. This book was originally published as a special issue of the Journal of Education Policy.

**Reviews of National Policies for Education Reviews of National Policies for Education: Kyrgyz Republic 2010** - Organisation for Economic Co-operation and Development 2010-12-21  
The Programme for International Student Assessment (PISA) is a highly influential instrument for monitoring the quality of education systems and provides a strong evidence base for informed policy making and education

research. PISA also has a proven potential to trigger reforms and stimulate stakeholder involvement in the process. Notwithstanding the importance of its ranking, the full strength of PISA unfolds when data it delivers is utilised in the national policy domain. Linking PISA outcomes and policy choices, and monitoring the impact on education quality is thereby a demanding task, which requires sound analytical capacity, and also knowledge of the strengths and weaknesses of the respective education system. The OECD Directorate for Education addresses the demand of non-member economies for policy support in understanding and analysing PISA data in the broader context of education system management and policy formulation. The present report was prepared to help the authorities of the Kyrgyz Republic better understand the reasons for the dramatically low performance of Kyrgyz students in the 2006 PISA survey, despite significant resources and efforts invested

in education by schools, parents and government. The report reveals that a number of policy areas are in need of urgent attention and recommends ways to close the currently existing gap between aspirations and education reform achievement.

**Caught in the Act** - Cyril Julie  
2019-12-11

The research reported in Caught in the Act draws together the insights gained from a continuous professional development initiative for high school mathematics teachers, teaching in low socio-economic status and socially challenged environments in South Africa.

The chapters show the possibilities for enhancing achievement in school mathematics if a strength-based approach is adopted to develop teaching with teachers and when their concerns are taken seriously. The book demonstrates that the ecological relevance - fitness for the context in which teachers are teaching - of the "goods" developed and distributed by initiatives should be a major consideration to offer hope for sustainable implementation to improve school mathematics education. The book is of interest to mathematics teachers, school leaders, mathematics curriculum advisors, policy makers and researchers. *Some Developments in Research in Science and Mathematics in Sub-Saharan Africa* - Lorna Holtman 2008 Much attention in late-developing countries is given to providing access to studies which allow school leavers to enter science and technology-related careers. This book reviews research related to the

crucial dimension of epistemological access to the disciplines of import, which students need as much as institutional access in order to improve their chances of success. A significant feature of this collection's research studies is that their empirical bases are highly localised, covering areas such as research methods, access, curriculum, instruction and assessment, and the relevance of science and mathematics education in Zimbabwe, Uganda, Swaziland, South Africa, Namibia, Malawi, Ghana and Lesotho. It is the outcome of a doctoral research capacity-development project, the Graduate Studies in Science, Mathematics and Technology Education (GRASSMATE).

The achievement of Japanese

high school students gained world prominence largely as a result of their performance in the International Mathematics Studies conducted by the International Association for the Evaluation of Educational Achievement in the 1960s and 1980s. These textbooks (Mathematical World volumes 8 to 11) are intended to give U. S. educators and researchers a first-hand look at the content of mathematics instruction in Japan. The textbook, Japanese Grade 10 covers material that is compulsory. This course, which is completed by over 97% of all Japanese students, is taught four hours per week and comprises algebra (including quadratic functions, equations, and inequalities), trigonometric functions, and coordinate geometry. Japanese Grade 11 is intended for the easier of the electives offered in that grade and is taken by about 40% of the students. It covers probability and statistics, vectors, exponential, logarithmic, and trigonometric functions, and an introduction to differentiation and

integration. The other 60% of students in grade 11 concurrently take two more extensive courses using the texts Japanese Grade 11 Algebra and Geometry and Japanese Grade 11 Basic Analysis. The first consists of fuller treatments of plane and solid coordinate geometry, vectors, and matrices. The second includes a more thorough treatment of trigonometry and a more extensive introduction to differential and integral calculus.
