Irresistible - Adam Alter

2018-03-06

“Irresistible is a fascinating and much needed exploration of one of the most troubling phenomena of modern times.”
—Malcolm Gladwell, author of New York Times bestsellers *David and Goliath* and *Outliers*
“One of the most mesmerizing and important books I’ve read in quite some time. Alter brilliantly illuminates the new obsessions that are controlling our lives and offers the tools we need to rescue our businesses, our families, and our sanity.” —Adam Grant, New York Times bestselling author of *Originals* and *Give and Take*
Welcome to the age of behavioral addiction—an age in which half of the American population is addicted to at least one behavior. We obsess over our emails, Instagram likes, and Facebook feeds; we binge on TV episodes and YouTube videos; we work longer hours each year; and we spend an average of three hours each day using our smartphones. Half of us would rather suffer a broken bone

than a broken phone, and Millennial kids spend so much time in front of screens that they struggle to interact with real, live humans. In this revolutionary book, Adam Alter, a professor of psychology and marketing at NYU, tracks the rise of behavioral addiction, and explains why so many of today's products are irresistible. Though these miraculous products melt the miles that separate people across the globe, their extraordinary and sometimes damaging magnetism is no accident. The companies that design these products tweak them over time until they become almost impossible to resist. By reverse engineering behavioral addiction, Alter explains how we can harness addictive products for the good—to improve how we communicate with each other, spend and save our money, and set boundaries between work and play—and how we can mitigate their most damaging effects on our well-being, and the health and happiness of our children. Adam Alter's previous

book, *Drunk Tank Pink: And Other Unexpected Forces that Shape How We Think, Feel, and Behave* is available in paperback from Penguin.

The Elements of Power -

David S. Abraham 2015-10-28

Our future hinges on a set of elements that few of us have even heard of. In this surprising and revealing book, David S. Abraham unveils what rare metals are and why our electronic gadgets, the most powerful armies, and indeed the fate of our planet depend on them. These metals have become the building blocks of modern society; their properties are now essential for nearly all our electronic, military, and "green" technologies. But their growing use is not without environmental, economic, and geopolitical consequences. Abraham traces these elements' hidden paths from mines to our living rooms, from the remote hills of China to the frozen Gulf of Finland, providing vivid accounts of those who produce, trade, and rely on rare metals. He argues

that these materials are increasingly playing a significant role in global affairs, conferring strength to countries and companies that can ensure sustainable supplies. Just as oil, iron, and bronze revolutionized previous eras, so too will these metals. The challenges this book reveals, and the plans it proposes, make it essential reading for our rare metal age.

On the Run - Catherine Doucette 2020-04-25

On the Run is a collection of personal essays that portray the life of Catherine Doucette, a backcountry skier, horseback rider, and mountaineer--roles that have resulted in adventures where she is often the only woman in a group of men. Starting from a young age, Doucette found herself pushing through the wilderness with her brothers, friends, and partners. Through hours spent outside, she gained the skill and judgement to tackle progressively bigger objectives

and turned into an accomplished outdoorswoman. This collection touches on her native state of New Hampshire but simultaneously focuses on the lure of big mountains in the West. For over a decade, she chased winter around the world to ski but always with an eye to living a more settled life, to putting her heart on the line if someone would just ask her to. Like other women who choose or yearn to be in the wilderness, she wrestles with reconciling her outdoor ambitions with society's expectations. On the Run will resonate with anyone who has searched to define home and belonging. It will appeal especially to women. Readers called by the West, by mountains, or by movement will feel at home in these pages. On the Run celebrates the comfort, challenge, and community found in the expanses of the wilderness while confronting the limitations and sacrifices of a transient, outdoor lifestyle.

Seattle Justice - Christopher T. Bayley 2015-10-20

This is the story of one of the youngest county prosecutors in the country whose mission was to finally end the system of vice and corruption that had infiltrated Seattle's police department, municipal departments, and even the mayor's office. In the late 1960s, Christopher T. Bayley was a young lawyer with a fire in his belly to break the back of Seattle's police payoff system, which was built on licensing of acknowledged illegal activity known as the "tolerance policy." Against the odds, he became the youngest prosecutor in King County (which includes Seattle). Six months into his first term, he

indicted a number of prominent city and police officials. Bayley shows how vice and payoffs became rules of the game in Seattle, and what it took to finally clean up the city.

Engendering China -

Christina K. Gilmartin

1994-04-08

This first significant collection of essays on women in China in more than two decades captures a pivotal moment in a cross-cultural—and interdisciplinary—dialogue. For the first time, the voices of China-based scholars are heard alongside scholars positioned in the United States. The distinguished contributors to this volume are of different generations, hold citizenship in different countries, and were trained in different disciplines, but all embrace the shared project of mapping gender in China and making power-laden relationships visible. The essays take up gender issues from a variety of disciplinary perspectives. Chapters focus on learned women in the

eighteenth century, the changing status of contemporary village women, sexuality and reproduction, prostitution, women's consciousness, women's writing, the gendering of work, and images of women in contemporary Chinese fiction. Some of the liveliest disagreements over the usefulness of western feminist theory and scholarship on China take place between Chinese working in China and Chinese in temporary or longtime diaspora.

Engendering China will appeal to a broad academic spectrum, including scholars of Asian studies, critical theory, feminist studies, cultural studies, and policy studies.

Measurement Approaches

for Mobile Healthcare - Gita

Khalili Moghaddam 2018-09-22

This book reviews existing sensor technologies that are now being coupled with computational intelligence for the remote monitoring of physical activity and ex vivo biosignatures. In today's

frenetic world, consumers are becoming ever more demanding: they want to control every aspect of their lives and look for options specifically tailored to their individual needs. In many cases, suppliers are catering to these new demands; as a result, clothing, food, social media, fitness and banking services are all being democratised to the individual. Healthcare provision has finally caught up to this trend and is currently being rebooted to offer personalised solutions, while simultaneously creating a more effective, scalable and cost-effective system for all. The desire for personalisation, home monitoring and treatment, and provision of care in remote locations or in emerging and impoverished nations that lack a fixed infrastructure, is leading to the realisation that mobile technology might be the best candidate for achieving these goals. A combination of several technological, healthcare and financial factors are driving this trend to create a new

healthcare model that stresses preventative 'health-care' rather than 'sick-care', and a shift from volume to value. Mobile healthcare (mhealth), which could also be termed the "internet of people", refers to the integration of sensors and smartphones to gather and interpret clinical data from patients in real-time. Most importantly, with an ageing population suffering multiple morbidities, mhealth could provide healthcare solutions to enhance chronically ill patients' quality of life.
