**Individual Differences** - College, University of London 2014-06-03

A title in the modular "Principles of Psychology" series, designed for A-level and other introductory courses. While normal individuals obviously differ from each other in various ways, psychologists have emphasized differences in intelligence and personality. This emphasis is reflected in the book, and various different views are discussed at length.; Abnormality has always been a source of fascination, although it has been difficult to form a good understanding of why and how abnormality develops.

Psychologists have also grappled with other complex issues, such as how to classify abnormal individuals and what forms of treatment will prove beneficial. In spite of complexities, much progress has been made.

*What the Face Reveals* - Paul Ekman 2005-04-14  
While we have known for centuries that facial

expressions can reveal what people are thinking and feeling, it is only recently that the face has been studied scientifically for what it can tell us about internal states, social behavior, and psychopathology. Today's widely available, sophisticated measuring systems have allowed us to conduct a wealth of new research on facial behavior that has contributed enormously to our understanding of the relationship between facial expression and human psychology. The chapters in this volume present the state-of-the-art in this research. They address key topics and questions, such as the dynamic and morphological differences between voluntary and involuntary expressions, the relationship between what people show on their faces and what they say they feel, whether it is possible to use facial behavior to draw distinctions among psychiatric populations, and how far research on automating facial measurement has progressed. The book also includes follow-up commentary on all of the original research presented and a concluding integration and critique of all the contributions made by Paul Ekman. As an essential reference for all those working in the area of facial analysis and expression, this volume will be indispensable for a wide range of professionals and students in the fields of psychology, psychiatry, and behavioral medicine.

*Personality and Individual Differences* - Michael Eysenck 2012-02-09

This book presents an introduction to the study of personality and individual differences, but it is not a textbook in the usual sense. As we shall point out in some detail later, typically textbooks on personality and individual differences either deal with statistical and psychometric problems, methodology, and the technical issues of measurement, or else they present the different theories of personality associated with various authors such as Maslow, Cattell, Freud, Jung, Murray, Rogers, Rotter, or to whomever the various eponymous chapters may be dedicated. The theories are presented, together with a brief mention of some empirical studies, but the student is not enlightened as to the weight to be given to the supporting evidence, nor is any comparison attempted between the different theories, formulating judgments regarding completeness, criteria adopted, or validity in terms of experimental proof. It is small wonder that philosophers of science have concluded that the social sciences, unlike the "hard" sciences, suffer from the lack of a paradigm (Kuhn, 1970); this defect is more noticeable, perhaps, in the study of personality and individual differences than in any other part of psychology (except perhaps in clinical and abnormal psychology, where an equal lack of consensus rules).

### **The Reinforcement Sensitivity Theory of Personality** - Philip J. Corr 2008-04-10

One of the major neuropsychological models of personality, developed by world-renowned psychologist Professor Jeffrey Gray, is based upon individual differences in reactions to punishing and rewarding stimuli. This biological theory of personality - now widely known as 'Reinforcement Sensitivity Theory' (RST) - has had a major influence on motivation, emotion and psychopathology research. In 2000, RST was substantially revised by Jeffrey Gray, together with Neil McNaughton, and this revised theory proposed three principal motivation/emotion systems: the 'Fight-Flight-Freeze System' (FFFS), the 'Behavioural Approach System' (BAS) and the 'Behavioural Inhibition System' (BIS). This is the first book to summarise the Reinforcement Sensitivity Theory of personality and bring together leading researchers in the field. It summarizes all of the pre-2000 RST research findings, explains and elaborates the implications of the 2000 theory for personality psychology and lays out the future research agenda for RST.

**Chess and Individual Differences** - Angel Blanch 2020-12-17

Research from the neurosciences and behavioural sciences highlights the importance of individual differences in explaining human behaviour. Individual differences in core psychological constructs, such as intelligence or personality, account for meaningful variations in a vast range of responses and behaviours. Aspects of chess have been increasingly used in the past to evaluate a myriad of psychological theories, and several of these studies consider individual differences to be key constructs in their respective fields. This book summarizes the research surrounding the psychology of chess from an individual-differences perspective. The findings accumulated from nearly forty years' worth of research about chess and individual differences are brought together to show what is known - and still unknown - about the

psychology of chess, with an emphasis on how people differ from one another.

Psychological Aspects of Geographical Moves - Miranda van Tilburg 2007-04

Mobility of mankind has increased enormously in the past few decades. People leave their homes and native countries for business and study, for vacation or to flee from unsafe conditions like wars and natural disasters. In all cases the sojourner faces a dual challenge of breaking with the familiar home environment and adjusting to new surroundings. This book deals with the psychological and health consequences of leaving the familiar home and the process of creating a new one. The focus is mainly on acculturation stress and homesickness, which both are relevant to those who travel.

Acculturation refers to the process and outcome of a person's encounter with, and adaptation to, a culturally new and different environment.

Homesickness is defined as a depression-like reaction to leaving one's home. The contributions in this book present empirical data as well as theoretical and conceptual discussions. Causes, consequences, moderating variables, and theoretical explanations are discussed. Both short-term (e.g., vacations) and long-term (e.g. immigration) separations from home receive attention. By combining these different but related topics, this book provides a valuable overview for researchers, teachers, students and professionals working with people who present with problems related to migration or traveling.

**Individual Differences and Personality** - Michael C. Ashton 2013-03-21

How do we come to be who we are? Why do we differ in our personalities? How do these differences matter in life? Individual Differences and Personality aims to describe how and why personality varies among people. Unlike books that focus on individual theorists, this book focuses on current research and theory on the nature of personality and related individual differences. The book begins by discussing how personality is measured, the concept of a personality trait, and the basic dimensions of personality. This leads to a discussion of the origins of personality, with descriptions of its

developmental course, its biological causes, its genetic and environmental influences, and its evolutionary function. The concept of a personality disorder is then described, followed by a discussion of the influence of personality on life outcomes in relationships, work, and health. Finally, the book examines the important differences between individuals in the realms of mental abilities, of beliefs and attitudes, and of behavior. Presents a scientific approach to personality and related individual differences, as well as theory and research on the fundamental questions about human psychological variation. New edition presents findings from dozens of new research studies of the past six years. Includes new chapter on vocational interests and a revised chapter on personality disorders reflecting DSM-5 formulation. Contains streamlined descriptions of measurement concepts and heritability research. Includes various boxes containing interesting asides that help to maintain the student's attention.

**Explorations in Temperament** - Jan Strelau  
2013-11-11

The growing interest in research on temperament during the last decade has been recorded by several authors (e. g. , R. Plomin; J. E. Bates) from such sources of information as the Social Sciences Citation Index or Psychological Abstracts. The editors' inquiry shows that the number of cases in which the term temperament was used in the title of a paper or in the paper's abstract published in Psychological Abstracts reveals an essential increase in research on temperament. During the years 1975 to 1979, the term temperament was used in the title and/or summary of 173 abstracts (i. e. , 34. 6 publications per year); during the next five years (1980-1984), it was used in 367 abstracts (73. 4 publications per year), whereas in the last five years (1985 to 1989), the term has appeared in 463 abstracts, that is, in 92. 6 publications per

year. Even if the review of temperament literature is restricted to those abstracts, it can easily be concluded that temperament is used in different contexts and with different meanings, hardly allowing any comparisons or general statements. One of the consequences of this state of affairs is that our knowledge on temperament does not cumulate despite the increasing research activity in this field. This situation in temperament research motivated the editors to organize a one week workshop on The Diagnosis of Temperament (Bielefeld, Federal Republic of Germany, September 1987).

**Processes in Individual Differences** - Colin Cooper 1997

One of the most fascinating topics in psychology is how and why people come to develop different personalities and abilities: the psychology of individual differences. Unlike many books on the structure and measurement of individual differences, this collection seeks to shed light on underlying processes. Containing contributions from international experts in their fields, Processes in Individual Differences reviews and explores what is known about the social, biological, genetic and cognitive processes, and argues that each has a role to play in the development of intelligence, personality and mood.

First published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

*Handbook of Individual Differences in Cognition* - Aleksandra Gruszka 2010-06-16

As cognitive models of behavior continue to evolve, the mechanics of cognitive exceptionality, with its range of individual variations in abilities and performance, remains a challenge to psychology. Reaching beyond the standard view of exceptional cognition equating superior intelligence, the *Handbook of Individual Differences in Cognition* examines the latest findings from psychobiology, cognitive psychology, and neuroscience, for a comprehensive state-of-the-art volume. Breaking down cognition in terms of attentional mechanisms, working memory, and higher-order processing, contributors discuss general models of cognition and personality. Chapter authors build on this foundation as they revisit current theory in such areas as processing effort and general arousal and examine emerging methods in individual differences research, including new data on the role of brain plasticity in cognitive function. The possibility of a unified theory of individual differences in cognitive ability and the extent to which these variables may account for real-world competencies are emphasized, and commentary chapters offer suggestions for further research priorities. Coverage highlights include: The relationship between cognition and temperamental traits. The development of autobiographical memory. Anxiety and attentional control. The neurophysiology of gender differences in cognitive ability. Intelligence and cognitive control. Individual differences in dual task coordination. The effects of subclinical depression on attention, memory, and reasoning. Mood as a shaper of information. Researchers, clinicians, and graduate students in psychology and cognitive sciences, including clinical psychology and neuropsychology, personality and social psychology, neuroscience, and education, will find the *Handbook of Individual Differences in Cognition* an expert guide to the field as it currently stands and to its agenda for the future.
