Environment, Power, and Society for the Twenty-First Century - Howard T. Odum
2007-06-08

Howard T. Odum possessed

one of the most innovative minds of the twentieth century. He pioneered the fields of ecological engineering, ecological economics, and environmental accounting, working throughout his life to better understand the interrelationships of energy, environment, and society and their importance to the well-being of humanity and the planet. This volume is a major modernization of Odum's classic work on the significance of power and its role in society, bringing his approach and insight to a whole new generation of students and scholars. For this edition Odum refines his original theories and introduces two new measures: emergy and transformity. These concepts can be used to evaluate and compare systems and their transformation and use of resources by accounting for all the energies and materials that flow in and out and expressing them in equivalent ability to do work. Natural energies such as solar radiation and the cycling of water, carbon, nitrogen, and

oxygen are diagrammed in terms of energy and emergy flow. Through this method Odum reveals the similarities between human economic and social systems and the ecosystems of the natural world. In the process, we discover that our survival and prosperity are regulated as much by the laws of energetics as are systems of the physical and chemical world.

Measuring and Evaluating Sustainability - Sarah E.

Fredericks 2013-08-15

The indexes used by local, national, and international governments to monitor progress toward sustainability do not adequately align with their ethical priorities and have a limited ability to monitor and promote sustainability. This book gives a theoretical and practical demonstration of how ethics and technical considerations can aid the development of sustainability indexes to overcome this division in the literature and aid sustainability initiatives. Measuring and Evaluating Sustainability develops and

illustrates methods of linking technical and normative concerns during the development of sustainability indexes. Specifically, guidelines for index development are combined with a pragmatic theory of ethics that enables ethical collaboration among people of diverse ethical systems. Using the resulting method of index development, the book takes a unique applied turn as it ethically evaluates multiple sustainability indexes developed and used by the European Commission, researchers, and local communities and suggests ways to improve the indexes. The book emphasizes justice as it is the most prevalent ethical principle in the sustainability literature and most neglected in index development. In addition to the ethical principles common to international sustainability initiatives, the book also employs a variety of religious and philosophical traditions to ensure that the ethical evaluations performed in the

text align with the ideals of the communities using the indexes and foster cross-cultural ethical dialogue. This volume is an invaluable resource for students, researchers and professionals working on sustainability indicators and sustainability policy-making as well as interdisciplinary areas including environmental ethics; environmental philosophy; environmental or social justice; ecological economics; businesses sustainability programs; international development and environmental policy-making.

The Selected Works of Arne Naess - Arne Naess

2007-11-17

Arne Naess is considered one of the most important philosophers of the twentieth century. He has been a tremendously prolific author, yet his works as a whole have remained largely unavailable – until now. Springer made available for the first time, a definitive 10-volume collection of Arne Naess’s life’s works: *The Selected Works of Arne Naess*. *The Selected Works of*

Arne Naess (SWAN) presents a major overview of Arne Naess's thinking and provides an extensive collection of this prolific philosopher's principal writings. Some of Naess's most important publications have never before been available in English. Many others are out of print. Often, his papers were published in obscure and inaccessible journals. And because Naess has been so prolific, many of his most important papers still remain unpublished. The publication of SWAN makes Naess's work more fully accessible to scholars, students, and critics alike.

The Deep Ecology

Movement - Alan Drengson
1995-02-02

Deep ecology, a term coined by noted Norwegian philosopher Arne Naess, is a worldwide grassroots environmental movement that seeks to redress the shallow and piecemeal approach of technology-based ecology. Its followers share a profound respect for the earth's interrelated natural systems

and a sense of urgency about the need to make profound cultural and social changes in order to respond and sustain the long-term health of the planet. This comprehensive introduction to the Deep Ecology movement brings together Naess' groundbreaking work with essays by environmental thinkers and activists responding to and expanding on its philosophical and practical aspects. Contributors include George Sessions, Gary Snyder, Alan Drengson, Dll Devall, Freya Matthews, Warwick Fox, David Rothenberg, Michael E. Zimmerman, Patsy Hallen, Dolores LaChapelle, Pat Fleming, Joanna Macy, John Rodman, and Andrew McLaughlin. The Authors offer diverse viewpoints- from ecofeminist, scientific, and purely philosophical approaches to Christian, Buddhist, and Gandhian-based principles. Their essays show how social, technological, psychological, philosophical, and institutional issues are all fundamentally related to our

attitudes and values toward the natural world.

Ecology of Wisdom - Arne Naess 2010-05-21

The Ecology of Wisdom is a definitive collection of essays by Norwegian philosopher Arne Naess, a founder of the Deep Ecology movement and one of the leading thinkers of modern environmentalism.

Drengson and Devall provide a comprehensive and accessible portrait of Naess's philosophy and activism, and showcase his enthusiasm, wit, and spiritual fascination with nature.

"My Name is Chellis & I'm in Recovery from Western Civilization" - Chellis

Glendinning 2007

When it came out in 1994, "My Name is Chellis and I'm in Recovery from Western Civilization" quickly became a classic of the ecopsychology movement. By documenting the entanglement of the ecological crisis with modern addictions, the book gives an unusual glimpse into matters of culture, history, politics, and personal consciousness.

Ecology Without Nature -

Timothy Morton 2009-09-15

In *Ecology without Nature*, Timothy Morton argues that the chief stumbling block to environmental thinking is the image of nature itself.

Ecological writers propose a new worldview, but their very zeal to preserve the natural world leads them away from the "nature" they revere. The problem is a symptom of the ecological catastrophe in which we are living. Morton sets out a seeming paradox: to have a properly ecological view, we must relinquish the idea of nature once and for all.

Ecology without Nature investigates our ecological assumptions in a way that is provocative and deeply engaging. Ranging widely in eighteenth-century through contemporary philosophy, culture, and history, he explores the value of art in imagining environmental projects for the future. Morton develops a fresh vocabulary for reading "environmentality" in artistic form as well as content, and traces the contexts of ecological constructs through

the history of capitalism. From John Clare to John Cage, from Kierkegaard to Kristeva, from The Lord of the Rings to electronic life forms, Ecology without Nature widens our view of ecological criticism, and deepens our understanding of ecology itself. Instead of trying to use an idea of nature to heal what society has damaged, Morton sets out a radical new form of ecological criticism: "dark ecology."

Environmental Ethics - David R. Keller 2010-03-15

Through a series of multidisciplinary readings, Environmental Ethics: The Big Questions contextualizes environmental ethics within the history of Western intellectual tradition and traces the development of theory since the 1970s. Includes an extended introduction that provides an historical and thematic introduction to the field of environmental ethics Features a selection of brief original essays on why to study environmental ethics by leaders in the field Contextualizes environmental

ethics within the history of the Western intellectual tradition by exploring anthropocentric (human-centered) and nonanthropocentric precedents Offers an interdisciplinary approach to the field by featuring seminal work from eminent philosophers, biologists, ecologists, historians, economists, sociologists, anthropologists, nature writers, business writers, and others Designed to be used with a web-site which contains a continuously updated archive of case studies:

The Philosophical Roots of the Ecological Crisis - Joshtrom

Isaac Kureethadam 2018-06-11

The Philosophical Roots of the Ecological Crisis: Descartes and the Modern Worldview traces the conceptual sources of the present environmental degradation within the worldview of Modernity, and particularly within the thought of René Descartes, universally acclaimed as the father of modern philosophy. The book demonstrates how the triple

foundations of the Modern worldview - in terms of an exaggerated anthropocentrism, a mechanistic conception of the natural world, and the metaphysical dualism between humanity and the rest of the physical world - can all be largely traced back to Cartesian thought, with direct ecological consequences.

Environmental Problem-Solving A Video-Enhanced Self-Instructional e-Book from MIT -

Lawrence Susskind 2017-12-04

The 'Environmental Problem-Solving - A Video-Enhanced Self-Instructional e-Book from MIT' e-book presents short-excerpts from carefully selected readings, expert commentaries on those readings, interactive assignments, short videos of the best MIT student responses to the assignments, exam questions with excellent student responses and additional video excerpts of MIT faculty discussing the four main elements of the curriculum: models of environmental policy-making; competing theories of

environmental ethics; tools for environmental assessment and environmental decision-making; and techniques for public engagement and group decision-making. The e-book covers the material presented in the semester-long course required of all students enrolled in MIT's Environmental Policy and Planning Specialization. It includes the actual assignments the MIT students are expected to complete each week as well as videos of the real-time oral presentations they are required to make to visiting practitioners. The final exam is accompanied by the best student answers.

Understanding Human Ecology - Geetha Devi T. V.
2019-01-28

This book examines the domain of human agency-environment interaction from a multidimensional point of view. It explores the human-environment interface by analysing its ethical, political and epistemic aspects - the value aspects that humans attribute to their

environment, the relations of power in which the actions and their consequences are implicated and the meaning of human actions in relation to the environment. The volume delineates the character of this domain and works out a theoretical framework for the field of human ecology. This book will be a must-read for students, scholars and researchers of environmental studies, human ecology, development studies, environmental history, literature, politics and sociology. It will also be useful to practitioners, government bodies, environmentalists, policy makers and NGOs.

Environmental Education in the 21st Century - Joy Palmer
2002-09-11

Environmental education is a field characterised by a paradox. Few would doubt the urgency and importance of learning to live in sustainable ways, but environmental education holds nowhere near the priority position in formal schooling around the world that this would suggest. This

text sets out to find out why this is so. It is divided into six parts: Part 1 is a concise history of the development of environmental education from an international perspective; Part 2 is an overview of the 'global agenda', or subject knowledge of environmental education; Part 3 introduces perspectives on theory and research in environmental education; Part 4 moves on to practice, and presents an integrated model for planning environmental education programmes; Part 5 brings together invited contributors who talk about environmental education in their own countries - from 15 countries including China, South Africa, Sri Lanka and the USA; Part 6 returns to the core questions of how progress can be made, and how we can maximise the potential of environmental education for the twenty first century.

Agency, Health And Social Survival - Caroline New
2015-01-28

This text addresses the interface of sociology and

psychology which, it argues, is the key to political change. Offering a comparison of a range of psychotherapeutic theories of human nature, including those of Freud and Anna Freud, Klein and Kleinians and Lacan, humanistic psychology, and feminist, trans-cultural and other radical psychotherapies, the book focuses on each theory's psychological concept of health and its political implications.

Gaia, Psyche and Deep Ecology - Andrew Fellows
2019-03-04

Winner of the Scientific & Medical Network Book Prize 2019! In *Gaia, Psyche and Deep Ecology: Navigating Climate Change in the Anthropocene*, Andrew Fellows uniquely connects Earth systems, Jungian and philosophical approaches to the existential threats that we face today. He elucidates the psychological basis of our dysfunctional relationship with nature, thereby offering a coherent framework for transforming this in our

personal and professional lives. Demonstrating the imperative for new ideas that transcend the status quo, Fellows tackles unprecedented 21st century challenges such as climate change through his interdisciplinary approach. Fellows proposes a worldview, informed by depth psychology, which radically contradicts the prevailing shibboleths of unlimited economic growth, dominion over outer nature and negation of our inner nature. To accommodate a broad readership, he first introduces the Anthropocene and sufficient basics of systems dynamics, Gaia theory and analytical psychology before exploring the mind-matter conundrum. He then correlates the structure, dynamics, contents and pathology of Gaia and of psyche, critiques the Western Zeitgeist as midlife crisis and establishes parallels between deep ecology and psychological individuation. This ground-breaking synthesis of Gaia theory, analytical psychology and deep ecology reveals synergies which show

how we can, and why we must, relinquish anthropocentrism in order to survive sustainably as equals in and with the natural world. Combining Jungian theory with other cutting-edge disciplines to inform, inspire and heal, this book is essential reading not only for Jungian analysts, students and scholars, but for all—including professionals in Earth systems science, environmental philosophy and ecopsychology—who realise that 'business as usual' is no longer an option.

The Second Media Age - Mark Poster 2018-03-08

This book examines the implications of new communication technologies in the light of the most recent work in social and cultural theory and argues that new developments in electronic media, such as the Internet and Virtual Reality, justify the designation of a "second media age".

Environmentalism - David Peterson Del Mar 2014-05-22
Environmental movements have produced some

impressive results, including cleaner air and the preservation of selected species and places. But movements that challenged western prosperity and comfort seldom made much progress, and many radical environmentalists have been unabashed utopianists. In this short guide, Peterson del Mar untangles this paradox by showing how prosperity is essential to environmentalism. Industrialisation made conservation sensible, but also drove people to look for meaning in nature even as they consumed its products more relentlessly. Hence England led the way in both manufacturing and preserving its countryside, and the United States created a matchless set of national parks as it became the world's pre-eminent economic and military power. Environmentalism considers both the conservation and preservation movements and less organized forms of nature loving (from seaside vacations to ecotourism) to argue that these activities have commonly

distracted us from the hard work of creating a sustainable and sensible relationship with the environment.

Culture, Creativity and Environment - Fiona Becket
2007-01

Culture, Creativity and Environment: New Environmentalist Criticism is a collection of new work which examines the intersection between philosophy, literature, visual art, film and the environment at a time of environmental crisis. This book is unusual in the way in which the 'imaginative', 'creative', element is privileged, notwithstanding the creativity of rigorous cultural criticism. Genuinely interdisciplinary, this book aims to be inclusive in its discussions of diverse cultural media (different literary genres, art forms and film for instance), which offer thoughtful and thought-provoking critiques of our relationships with the environment. Our ability to transcend the ethical and aesthetic categories and discourses that have

contributed to our alienation from our environment is dependant upon an enlargement of our imaginative capacities. In a modest way this book might contribute to what Ted Hughes, speaking of the imagination of each new child, described as "nature's chance to correct culture's error".

Practical Spirituality and Human Development -

Ananta Kumar Giri 2019-05-15

This book explores varieties of spiritual movements and alternative experiments for the generation of beauty, dignity and dialogue in a world where the rise of the religious in politics and the public sphere is often accompanied by violence. It examines how spirituality can contribute to human development, social transformations and planetary realizations, urging us to treat each other, and our planet, with evolutionary care and respect. Trans-disciplinary and trans-paradigmatic to its very core, this text opens new pathways of practical spirituality and humanistic

action for both scholarship and discourse and offers an invaluable companion for scholars across religious studies, cultural studies and development studies.

Connection to Nature, Deep Ecology, and Conservation Social Science - Christian Diehm 2020-12-15

In *Connection to Nature, Deep Ecology, and Conservation Social Science: Human-Nature Bonding and Protecting the Natural World*, Christian Diehm analyzes the relevance of the philosophy of deep ecology to contemporary discussions of human-nature connectedness. Focusing on deep ecologists' notion of "identification" with nature, Diehm argues that deep ecological theory is less conceptually problematic than is sometimes thought, and offers valuable insights into what a sense of connection to nature entails, what its attitudinal and behavioral effects might be, and how it might be nurtured and developed. This book is closely informed by, and engages at

length with, conservation social science, which Diehm draws on to assess the claims of deep ecology theorists, resolve long-standing problems associated with their work, investigate the impacts of time outdoors on human-nature bonding, and critically review the biophilia hypothesis. Emphasizing the foundational role of ecologically-inclusive identities in pro-environmental attitudes and behaviors, Diehm demonstrates that having a sense of connection to nature is more important than many environmental advocates have realized, and that deep ecology has much to add to the increasingly pressing conversations about it.

Earth's Insights - J. Baird Callicott 1997-12-29

"A lucid, original, and useful work by a fine scholar already well known in the emerging field of environmental philosophy."—David Abram, University of Kansas

Conservation Is Our Government Now - Paige West 2006-05-10

A significant contribution to

political ecology, *Conservation Is Our Government Now* is an ethnographic examination of the history and social effects of conservation and development efforts in Papua New Guinea. Drawing on extensive fieldwork conducted over a period of seven years, Paige West focuses on the Crater Mountain Wildlife Management Area, the site of a biodiversity conservation project implemented between 1994 and 1999. She describes the interactions between those who ran the program—mostly ngo workers—and the Gimi people who live in the forests surrounding Crater Mountain. West shows that throughout the project there was a profound disconnect between the goals of the two groups. The ngo workers thought that they would encourage conservation and cultivate development by teaching Gimi to value biodiversity as an economic resource. The villagers expected that in exchange for the land, labor, food, and friendship they offered the conservation

workers, they would receive benefits, such as medicine and technology. In the end, the divergent nature of each group's expectations led to disappointment for both. West reveals how every aspect of the Crater Mountain Wildlife Management Area—including ideas of space, place, environment, and society—was socially produced, created by changing configurations of ideas, actions, and material relations not only in Papua New Guinea but also in other locations around the world. Complicating many of the assumptions about nature, culture, and development underlying contemporary conservation efforts, *Conservation Is Our Government Now* demonstrates the unique capacity of ethnography to illuminate the relationship between the global and the local, between transnational processes and individual lives.

Limits - Giorgos Kallis

2019-08-06

Western culture is infatuated with the dream of going

beyond, even as it is increasingly haunted by the specter of apocalypse: drought, famine, nuclear winter. How did we come to think of the planet and its limits as we do? This book reclaims, redefines, and makes an impassioned plea for limits—a notion central to environmentalism—clearing them from their association with Malthusianism and the ideology and politics that go along with it. Giorgos Kallis rereads reverend-economist Thomas Robert Malthus and his legacy, separating limits and scarcity, two notions that have long been conflated in both environmental and economic thought. Limits are not something out there, a property of nature to be deciphered by scientists, but a choice that confronts us, one that, paradoxically, is part and parcel of the pursuit of freedom. Taking us from ancient Greece to Malthus, from hunter-gatherers to the Romantics, from anarchist feminists to 1970s radical environmentalists, *Limits* shows us how an

institutionalized culture of sharing can make possible the collective self-limitation we so urgently need.

Deep Ecology and World Religions - David Landis

Barnhill 2010-03-29

Parallels and contrasts values from world religions and those proposed by the environmental perspective of deep ecology.

The Evolution of Natural Resources Law and Policy -

Lawrence J. MacDonnell 2010

Natural resources law is a dynamic field of practice, with a rich history that reaches back several centuries. The authors look at current challenges and offer ideas about the future while demonstrating that the federal government's role continues to be a complex one as markets and private actors become more visible participants in the current policy arena. Part I provides foundational analyses of the law, while the second part reviews thematic issues in the area.

Spinoza and Deep Ecology -

Eccy de Jonge 2017-03-02

Spinoza and Deep Ecology

explores the philosophical, psychological and political assumptions that underpin a concern for nature, offering specific suggestions how the domination of humans and nature may be overcome. It is primarily intended as an introduction to the philosophy of ecology, known as deep ecology, and to the way Spinoza's philosophy has been put to this aim. Only a self-realisation, along the lines of Spinoza's philosophy, can afford a philosophy of care which is inclusive of humans and the non-human world, which recognises the need for civil laws and democratic politics for human flourishing. In stark contrast to texts written by or on behalf of deep ecologists, Spinoza and Deep Ecology is not afraid of criticising existing versions of deep ecology which fail to accept that human concerns are integral to environmental issues.

The Future of Ecocriticism - Serpil Oppermann 2011-05-25
As we enter the second decade of the twenty-first century,

environmental concerns dominate the media headlines, from rampant poverty in the developing world to nuclear accidents in industrialized nations. How did human civilization arrive at its current predicaments, and what can we do to temper our habits of mind and mitigate society's environmentally (and socially) destructive behaviors? The field of ecocriticism (also sometimes called "environmental criticism") attempts to grapple with such issues. A branch of literary and cultural studies that essentially began in North America in the 1970s, ecocriticism is currently one of the most quickly developing areas of environmental research and teaching. *The Future of Ecocriticism: New Horizons* brings together thirty-two of the latest articles in the field, including work by some of the leading scholars from around the world. Although ecocriticism has been particularly active in North America, Western Europe, and East Asia, important studies of

traditional environmental thought, environmental communication strategies, and environmental aesthetics have begun to emerge in every region of this world. This new book, co-edited by three prominent Turkish scholars and a leading American ecocritic, offers a special cluster of Turkish ecocriticism, with a focus on environmental stories and ideas in this culture that bridges Europe and Asia. Another unique feature of *The Future of Ecocriticism: New Horizons* is the concluding dialogue among the four editors about the current state of the field.

Brill's Companion to Anarchism and Philosophy -

Nathan J. Jun 2017-09-25
Brill's Companion to Anarchism and Philosophy offers a broad thematic overview of the relationship between anarchism and philosophy.

Tensional Landscapes - Gary Backhaus 2003

The contributors to this volume address global, regional, and local landscapes, cosmopolitan and indigenous cultures, and

human and more-than-human ecology as they work to reveal place-specific tensional dynamics. This unusual book, which covers a wide-ranging array of topics, coheres into a work that will be a valuable reference for scholars of geography and the philosophy of place.

Environmental Problem-Solving: Balancing Science and Politics Using Consensus Building Tools - Lawrence Susskind 2020-10-31

'Environmental Problem-Solving' presents short excerpts from carefully selected readings, expert commentaries on those readings, assignments, and the best MIT student responses to the assignments and exam questions with excellent student response. The book presents four main models of environmental policy-making: competing theories of environmental ethics; tools for environmental assessment and environmental decision-making; and techniques for public engagement and group decision-making. The book

covers the material presented in the semester-long course required of all students enrolled in MIT's Environmental Policy and Planning Specialization. Deep Ecology - George Sessions 2001-01-19 Deep Ecology explores the philosophical, psychological, and sociological roots of today's environmental movement, examines the human-centered assumptions behind most approaches to nature, explores the possibilities of an expanded human consciousness, and offers specific direct action suggestions for individuals to practice. Widely read in its first printing, Deep Ecology has established itself as one of the most significant books on environmental thought to appear in this decade. "Deep Ecology is subversive, but it's the kind of subversion we can use." --San Francisco Chronicle "This book is an attempt at codifying a scattered body of ecological insight into a philosophy that places human beings on an absolutely equal

footing with all other creatures on the planet." --Stephanie Mills, Whole Earth Review "Difficult and (to some) unfamiliar insights on nature and human beings presented with simplicity and clarity, Deep Ecology rattles a cage full of occidental presumptions and yet it all seems almost like common sense." --Gary Snyder **Cosmology and Creation** - Paul T. Brockelman 1999 In this fascinating look at the spiritual side of modern cosmology, the author of "The Greening of Faith: God, the Environment, and the Good Life" seeks to bridge the gap between the scientific and the spiritual, offering a vision of a "wider order of being". Environmental Ethics - Joseph R. Des Jardins 2012-01-13 ENVIRONMENTAL ETHICS, FIFTH EDITION offers brief yet wide-ranging introduction to issues of environmental ethics and major schools of thought in the field. A discussion of basic concepts in ethical theory in Part I is followed by an application of these thoughts across a variety of major

environmental problems (such as pollution, population, animals) in Part II. Part III introduces students to the major theories of environmental ethics in particular (including biocentrism, ecofeminism, and the land ethic). The final chapter offers a pragmatic approach to reconciling philosophical perspectives as a means to making progress in solving environmental problems. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Ecology, Community and

Lifestyle - Arne Naess

1990-10-26

The basic thesis of the work is that environmental problems are only to be solved by people - people who will be required to make value judgements in conflicts that go beyond narrowly conceived human concerns. Thus people require not only an ethical system, but a way of conceiving the world and themselves such that the intrinsic value of life and

nature is obvious, a system based on 'deep ecological principles'. The book encourages readers to identify their own series of such parameters - their own ecosophies. Ecology, Community and Lifestyle will appeal to philosophers, specialists working on environmental issues, and the more general reader who is interested in learning some of the foundational ideas of the rapidly expanding field of environmental philosophy.

Haunted Spaces in Twenty-First Century British Nature

Writing - Anneke Lubkowitz

2020-06-08

This study investigates the figure of haunting in the New Nature Writing. It begins with a historical survey of nature writing and traces how it came to represent an ideal of 'natural' space as empty of human history and social conflict. Building on a theoretical framework which combines insights from ecocriticism and spatial theory, the author explores the spatial dimensions of haunting and

'hauntology' and shows how 21st-century writers draw on a Gothic repertoire of seemingly supernatural occurrences and spectral imagery to portray 'natural' space as disturbed, uncanny and socially contested. Iain Sinclair and Robert Macfarlane are revealed to apply psychogeography's interest in 'hidden histories' and haunted places to spaces associated with 'wilderness' and 'the countryside'. Kathleen Jamie's allusions to the Gothic are put in relation to her feminist re-writing of 'the outdoors', and John Burnside's use of haunting is shown to dismantle fictions of 'the far north'. This book provides not only a discussion of a wide range of factual and fictional narratives of the present but also an analysis of the intertextual dialogue with the Romantic tradition which enfolds in these texts.

[Deep Ecology for the Twenty-First Century](#) - George

Sessions 1995-01-24

Discusses the fundamental relationship between human

beings and nature, and suggests an ethical and philosophical foundation for environmental protection in the next hundred years

Art, Theory and Practice in the Anthropocene - Julie

Reiss 2019-03-31

Art, Theory and Practice in the Anthropocene contributes to the growing literature on artistic responses to global climate change and its consequences. Designed to include multiple perspectives, it contains essays by thirteen art historians, art critics, curators, artists and educators, and offers different frameworks for talking about visual representation and the current environmental crisis. The anthology models a range of methodological approaches drawn from different disciplines, and contributes to an understanding of how artists and those writing about art construct narratives around the environment. The book is illustrated with examples of art by nearly thirty different contemporary artists.

A Companion to Environmental

Philosophy - Dale Jamieson
2008-04-15

A Companion to Environmental Philosophy is a pioneering work in the burgeoning field of environmental philosophy. This ground-breaking volume contains thirty-six original articles exemplifying the rich diversity of scholarship in this field. Contains thirty-six original articles, written by international scholars. Traces the roots of environmental philosophy through the exploration of cultural traditions from around the world. Brings environmental philosophy into conversation with other fields and disciplines such as literature, economics, ecology, and law. Discusses environmental problems that stimulate current debates.

Milton and Ecology - Ken Hiltner 2003-11-20

In *Milton and Ecology*, Ken Hiltner engages with literary, theoretical, and historic approaches to explore the ideological underpinnings of our current environmental crisis. Focusing on Milton's

rejection of dualistic theology, metaphysical philosophy, and early-modern subjectivism, Hiltner argues that Milton anticipates certain essential modern ecological arguments. Even more remarkable is that Milton was able to integrate these arguments with biblical sources so seamlessly that his interpretative 'Green' reading of scripture has for over three centuries been entirely plausible. This study considers how Milton, from the earliest edition of the Poems, not only sought to tell the story of how through humanity's folly Paradise on earth was lost, but also sought to tell how it might be regained. This intriguing study will be of interest to eco-critics and Milton specialists alike.

Main Currents in Western Environmental Thought - P. R. Hay 2002

Topics covered include the roots of environmental philosophy; the development of ecophilosophy, deep ecology, and ecofeminism; how religion relates to environmental values; environmentalists'

writings on science and epistemology; animal liberation; the role of place; the economic dimensions of environmental thought; environmental writing in various political traditions; and

"green" writers' critiques of political movements. The work draws from the disciplines of philosophy, political science, psychology, sociology, and cultural studies.
