Delivering Successful PMOs

- Peter Taylor 2016-03-09

Delivering Successful PMOs is intended to be the companion book to Leading Successful PMOs (Peter Taylor) which was a guide to all project based organisations providing a common language to describe the variety of possible PMOs, explaining how to do the right things, in the right way, in the right order, with the right team, and identifying what made a good PMO leader.

Delivering Successful PMOs takes this to the next level and provides a clear framework to conceive, design, build, prove and embody an enterprise PMO inside an organisation, dealing with the strategic intentions, the politics, the people and the projects. The book draws on the rare experience that Ray Mead, through his organisation p3m global(www.p3m.global) had in building an enterprise PMO for a major organisation (based in the Middle East) from the ground up - a 'greenfield' enterprise PMO. Through this process he and his team have

developed an invaluable methodology that is shared through this book alongside a real case study - this is not theory, this is not 'perfect' world modelling, this is proven through practice and live application. Peter and Ray extend the guidelines from the first book and weave them in to the process of delivering a PMO that works for an organisation and delivers success - measured by improved project health, greater returns on investment, a better project management community, closer connection to business strategy and a more mature project organisation.

However, when abstract concepts are introduced, students often hit a wall. Instructors seem to agree that certain concepts (such as linear independence, spanning, subspace, vector space, and linear transformations) are not easily understood and require time to assimilate. These concepts are fundamental to the study of linear algebra, so students' understanding of

them is vital to mastering the subject. This text makes these concepts more accessible by introducing them early in a familiar, concrete "Rn" setting, developing them gradually, and returning to them throughout the text so that when they are discussed in the abstract, students are readily able to understand.
