Curricular Program Implementation in the Context of Randomized Field Trials - Gloria Isabel Miller 2011

Abstract curricular program implementation in the context of randomized field trials Gloria Isabel Miller This study examined three cases of commercially available curricular program implementations to determine if a unified approach to measuring the level of implementation was possible (proof of concept). Further, the study investigated whether the level of curriculum and implementation plan specificity made a difference to the strength of implementation achieved in classrooms; and described the implementation

evolution in different contexts. The study sample consists of a total of 163 teachers in eight school districts across the United States. In each case teachers were randomly assigned to using the curricular innovation or their currently used materials and processes. The three cases, HS-Math, NewScience, and MathIntervention, were purposely chosen to represent three different points of curricular and implementation specificity and two different subject areas, math and science. Each case features a commercially available program that also had opportunities for teachers to use "electronic" technology to enhance their learning or to engage their students. The cases represent differing student grade levels. The cases are different enough to provide a range that exercises the measurement techniques introduced in this study so results can begin to generalize across curricular programs and grades. However, the cases are similar enough in research design, instrumentation, and data collection methods to make them comparable. A key contribution of this investigation is the creation of a framework to measure the level of implementation (the extent to which the teacher and students display the actions, behaviors, and interactions expected by using the innovation). The unified conceptual framework arrived at by using an Activity Theory perspective together with the analytical methods employed provide a way to view the rich complex interaction of implementation as a system with the larger system of the school organization. Data from the analysis revealed that variations in the level of implementation were no different regardless of the level of specificity. A strong finding of this work is that implementation evolves slowly even when the curricular program is scripted and coaching support is provided to teachers. The paper concludes with implications for policy and future research.

Trigonometry - Ted Sundstrom 2017-12-08

This college level trigonometry text may be different than most other trigonometry textbooks. In this book, the reader is expected to do more than read the book but is expected to study the material in the book by working out examples rather than just reading about them. So the book is not just about mathematical content (although it does contain important topics in trigonometry needed for further study in mathematics), but it is also about the process of learning and doing mathematics and is designed not to be just casually read but rather to be engaged. Recognizing that actively studying a mathematics book is often not easy, several features of the textbook have been designed to help students become more engaged as they study the material. Some of the features are: Beginning activities in each section that engage students with the material to be introduced, focus questions that help students stay focused on what is important in the section, progress checks that are short exercises or activities that replace the standard examples in most textbooks, a section summary, and appendices with answers for the progress checks and selected exercises.

The Interruption of Everything - Terry McMillan 2007-05-01

From #1 New York Times bestselling author Terry McMillan comes a "frank, no-holds-barred, humorous look at African-American midlife" (The Seattle Times). "Being a lifetime wife and mother has afforded me the luxury of having multiple and even simultaneous careers: I've been a chauffeur. A chef. An interior decorator. A landscape architect, as well as a gardener. I've been a painter. A furniture restorer. A personal shopper. A veterinarian's assistant and sometimes the veterinarian. I've been an accountant, a banker, and on occasion, a broker. I've been a beautician. A map. A psychic. Santa Claus. The Tooth Fairy. The T.V. Guide. A movie reviewer. An angel. God. A nurse and a nursemaid. A psychiatrist and psychologist. Evangelist. For a long time I have felt like I inadvertently got my master's in How to Take Care of Everybody Except Yourself and then a PhD in How to Pretend Like You Don't Mind. But I do mind." Today forty-four year old Marilyn Grimes has decided to be something other than a wife, a mother, a sister, or a daughter: herself. But first, she has to figure out exactly who that is....
