Using accessible language to describe concepts and methods, and with a wealth of new in-text worked examples to challenge students' understanding, this textbook

provides an essential guide to the key techniques used in current bioscience research.  
**Clinical Chemistry** - Lawrence A. Kaplan 2003  
The fourth edition contains revised material, including new material on the CD-ROM, such as the urinalysis chapter. New material is included on point-of-care testing, HIPPA, recent concepts of LIS technology, bone disease and women's health, recent NCEP guidelines for cholesterol screening, fetal lung maturity testing, and screening for gestational diabetes. Two new sections have been added on bioterrorism and the human genome project and genetic-based disease. Most of the contributors are affiliated with US hospitals; some are in Canada and Germany. **Practical Clinical Biochemistry** - Ranjna Chawla 2014-04-30

Fully revised, new edition presenting latest developments in medical biochemistry. Includes many new chapters and case reports. Previous edition published in 2006.

**Textbook of Blood Banking and Transfusion Medicine** - Sally V. Rudmann 2005-02-18  
This comprehensive book on transfusion practices and immunohematology offers concise, thorough guidelines on the best ways to screen donors, store blood components, ensure safety, anticipate the potentially adverse affects of blood transfusion, and more. It begins with the basics of genetics and immunology, and then progresses to the technical aspects of blood banking and transfusion. Chapters are divided into sections on: Basic Science Review; Blood Group Serology; Donation, Preparation, and Storage; Pretransfusion Testing; Transfusion Therapy; Clinical Considerations; and Safety, Quality Assurance, and Data Management. Developed specifically for medical technologists, blood bank specialists, and residents, the new edition conforms to the most current standards of the American Association of Blood Banks (AABB). Expert Opinion essays, written by well-known, frequently published experts, discuss interesting topics of research or new advances in the field. Important terms are defined in the margins of the pages on which they appear, enabling readers to easily check the meaning of an unfamiliar term where it appears in context. Margin notes highlight important concepts and

points, remind readers of previously discussed topics, offer an alternative perspective, or refer readers to other sources for further information. Material conforms to the most recent AABB standards for the most accurate, up-to-date information on immunohematology. Advanced concepts, beyond what is required for entry-level practice, are set apart from the rest of the text so readers can easily differentiate between basic and advanced information. A new chapter on Hematopoietic Stem Cells and Cellular Therapy (chapter 19) provides cutting-edge coverage of cellular therapy and its relevance to blood-banking. New content has been added on molecular genetics, component therapy, and International Society of Blood Transfusion (ISBT) nomenclature, as well as the latest information on HIV, hepatitis, quality assurance, and information systems. Coverage of new technologies, such as nucleic acid technology and gel technology, keeps readers current with advances in the field.
