Maritime Women: Global Leadership - Momoko Kitada 2015-02-05

This exciting new WMU book series' volume features the first attempt to include detailed experiences of women in the maritime sector at a global level. It highlights the achievement of women in the maritime sector, in particular, women's leadership and service to the sustainable development of the maritime industry. The volume contains contemporary studies on maritime women and follows an interdisciplinary approach. It offers an overview of women's integration into the maritime sector since the late 1980s as well as benchmarking its impact on various levels, such as policy, employment, education, leadership and sustainability. Even 20 years after the Beijing Declaration, gender-related challenges at work still remain in the maritime sector, for example, lack of gender policy, difficulty in work-life balance, access to education, and leadership opportunities. The book addresses a series of recommendations that may further help the integration of women into the maritime sector.

Varieties of Alternative Economic Systems - Richard Westra 2017-07-14

In this age of overlapping and mutually reinforcing deep global crises (financial convulsions, global warming, mass migrations, militarism,

inequality, selfish nation-states, etc.), there needs to be more realistic dialogue about radical alternatives to the status quo. Most literature produced heretofore has focused on the surface causes of these crises without much attention given to the sorts of major societal changes needed in order to deal with the crises we face. This book moves the debate beyond the critiques and the false or not fully realised alternatives, to focus on what can be termed "practical utopias". The contributors to this book outline a range of practical proposals for constructing pathways out of the global economic, ecological and social crisis. Varieties of Alternative Economic Systems eschews a single blueprint but insists on dealing directly with the deep structural problems and contradictions of contemporary global capitalism. It provides a diverse array of complementary proposals and perspectives that can inform both theoretical thinking and practical action. This volume will be of interest to academics and students who study political science, ecological economics, international politics and socialism.

Love Letters of Great Men - Ursula Doyle 2008-11-25

Remember the wonderfully romantic book of love letters that Carrie reads aloud to Big in the recent blockbuster film, Sex and the City? Fans raced to buy copies of their own, only to find out that the beautiful book didn't actually exist. However, since all of the letters referenced in the film did exist, we decided to publish this gorgeous keepsake ourselves. Love Letters of Great Men follows hot on the heels of the film and collects together some of history's most romantic letters from the private papers of Beethoven, Mark Twain, Mozart, and Lord Byron. For some of these great men, love is "a delicious poison" (William Congreve); for others, "a nice soft wife on a sofa with good fire, & books & music" (Charles Darwin). Love can scorch like the heat of the sun (Henry VIII), or penetrate the depths of one's heart like a cooling rain (Flaubert). Every shade of love is here, from the exquisite eloquence of Oscar Wilde and the simple devotion of Robert Browning, to the wonderfully modern misery of the Roman Pliny the Younger, losing himself in work to forget how much he misses his beloved wife, Calpurnia. Taken together, these letters show that perhaps men haven't changed all that much over the last 2,000 years--passion, jealousy, hope and longing still rule their hearts and minds. In an age of e-mail and texted "i luv u"s, this timeless and unique collection reminds us that nothing can compare to the simple joy of sitting down to read a letter from the one you love.

A Student's Guide to Geophysical Equations - William Lowrie 2011-05-26

The advent of accessible student computing packages has meant that geophysics students can now easily manipulate datasets and gain first-

hand modeling experience - essential in developing an intuitive understanding of the physics of the Earth. Yet to gain a more in-depth understanding of physical theory, and to develop new models and solutions, it is necessary to be able to derive the relevant equations from first principles. This compact, handy book fills a gap left by most modern geophysics textbooks, which generally do not have space to derive all of the important formulae, showing the intermediate steps. This guide presents full derivations for the classical equations of gravitation, gravity, tides, earth rotation, heat, geomagnetism and foundational seismology, illustrated with simple schematic diagrams. It supports students through the successive steps and explains the logical sequence of a derivation - facilitating self-study and helping students to tackle homework exercises and prepare for exams.

Exchange Rate Misalignment in Developing Countries - Sebastian Edwards 1988

This article analyzes the theory of equilibrium real exchange rates and defines misalignment as a deviation of the real exchange rate (RER) from its equilibrium level. The role of macroeconomic policies is then analyzed under three alternative nominal exchange rate regimes: predetermined nominal exchange rates; floating nominal rates; and dual or black market nominal exchange rates. This discussion points out how inconsistent macroeconomic policies often lead to real exchange rate misalignment. Corrective measures, including nominal devaluation and several alternative approaches, are then evaluated.

Principles of Electric Circuits - Thomas L. Floyd 1993

This book provides an exceptionally clear introduction to DC/AC circuits supported by superior exercises, examples, and illustrations--and an emphasis on troubleshooting and applications. It features an exciting full color format which uses color to enhance the instructional value of photographs, illustrations, tables, charts, and graphs. Throughout the book's coverage, the use of mathematics is limited to only those concepts that are needed for understanding. Floyd's acclaimed troubleshooting emphasis, as always, provides learners with the problem solving experience they need for a successful career in electronics. Chapter

topics cover components, quantities and units; voltage, current, and resistance; Ohm's Law; energy and power; series circuits; parallel circuits; series-parallel circuits; circuit theorems and conversions; branch, mesh, and node analysis; magnetism and electromagnetism; an introduction to alternating current and voltage; phasors and complex numbers; capacitors; inductors; transformers; RC circuits; RL circuits; RLC circuits and resonance; basic filters; circuit theorems in AC analysis; pulse response of reactive circuits; and polyphase systems in power applications. For electronics technicians, electronics teachers, and electronics hobbyists.

Environmental Transport Processes - Bruce E. Logan 2012-03-20

A unique approach to the challenges of complex environmental systems Environmental Transport Processes, Second Edition provides much-needed guidance on mass transfer principles in environmental engineering. It focuses on working with uncontrolled conditions involving biological and physical systems, offering examples from diverse fields, including mass transport, kinetics, wastewater treatment, and unit processes. This new edition is fully revised and updated, incorporating modern approaches and practice problems at the end of chapters, making the Second Edition more concise, accessible, and easy to use. The book discusses the fundamentals of transport processes occurring in natural environments, with special emphasis on working at the biological-physical interface. It considers transport and kinetics in terms of systems that involve microorganisms, along with in-depth coverage of particles, size spectra, and calculations for particles that can be considered either spheres or fractals. The book's treatment of particles as fractals is especially unique and the Second Edition includes a new section on exoelectrogenic biofilms. It also addresses dispersion in natural and engineered systems unlike any other book on the subject. Readers will learn to tackle with confidence complex environmental systems and make transport calculations in heterogeneous environments with mixtures of chemicals.

Principles of Biomedical Instrumentation and Measurement - Richard Aston 1990

A contemporary new text for preparing students to work with the complex patient-care equipment found in today's modern hospitals and clinics. It begins by presenting fundamental prerequisite concepts of electronic circuit theory, medical equipment history and physiological transducers, as well as a systematic approach to troubleshooting. The text then goes on to offer individual chapters on common and speciality medical equipment, both diagnostic and therapeutic. Self-contained, these chapters can be used in any order, to fit the instructor's class goals and syllabus.

Blueprint 3 - David Pearce 2017-02-02

Blueprint 3 is the direct sequel to the ground-breaking Blueprint for a Green Economy. Taking the argument much further, David Pearce and his colleagues show how progress towards sustainability in the UK can be measured. They set out the conditions for sustainable development and the measures of economic progress these imply, before looking in detail at all the main areas of economic activity to which the measures are applicable. The result is a wide-ranging and cogent critique of

existing policies which also offers new options - options which will require far-reaching reform of this country's existing political and institutional structure. Blueprint 3 will be a touchstone for future discussions of all the major policy areas.

Getting Down to Earth - International Society for Ecological Economics 1996

Achieving global sustainability will require the development and integration of three elements: a shared vision of what a sustainable society is; new methods of analysis and modelling to understand and describe that vision; and new institutions and instruments that can make the vision a reality. *Getting Down to Earth* examines these three elements and the importance of their integration for the creation of a sustainable world. Drawing on materials from a workshop following the third international conference of the International Society for Ecological Economics, *Getting Down to Earth* brings together scientists, managers, and national and international policymakers to identify practical strategies for implementing sustainability based on ecological economic principles. The book: reexamines the status quo from biophysical as well as social perspectives considers the collaborative process of developing a shared vision of a sustainable and desirable society addresses the need for models that incorporate precepts of ecological economics suggests institutional changes necessary for implementing the ecological economics vision of sustainability illustrates the importance of social, economic, cultural, and ecological factors in achieving sustainability using case studies from Latin America

Joining a shared vision of a sustainable and desirable world with adequate analysis and innovative implementation promises to be the "full package" necessary to achieve sustainability. Ecological economics, a transdisciplinary approach that focuses directly on the problems facing humanity and the life-supporting ecosystems on which we depend, is helping to foster the dialogue necessary to pull the package together and move toward newly articulated goals. *Getting Down to Earth* presents an important overview of the practical applications of ecological economics for students, researchers, faculty, and anyone interested in the development of a

sustainable society.

Snake Robots - Pål Liljebäck 2012-06-13

Snake Robots is a novel treatment of theoretical and practical topics related to snake robots: robotic mechanisms designed to move like biological snakes and able to operate in challenging environments in which human presence is either undesirable or impossible. Future applications of such robots include search and rescue, inspection and maintenance, and subsea operations. Locomotion in unstructured environments is a focus for this book. The text targets the disparate muddle of approaches to modelling, development and control of snake robots in current literature, giving a unified presentation of recent research results on snake robot locomotion to increase the reader's basic understanding of these mechanisms and their motion dynamics and clarify the state of the art in the field. The book is a complete treatment of snake robotics, with topics ranging from mathematical modelling techniques, through mechatronic design and implementation, to control design strategies. The development of two snake robots is described and both are used to provide experimental validation of many of the theoretical results. Snake Robots is written in a clear and easily understandable manner which makes the material accessible by specialists in the field and non-experts alike. Numerous illustrative

figures and images help readers to visualize the material. The book is particularly useful to new researchers taking on a topic related to snake robots because it provides an extensive overview of the snake robot literature and also represents a suitable starting point for research in this area.

Soil and Sediment Remediation - Piet Lens 2005-09-30

Soil and Sediment Remediation discusses in detail a whole set of remediative technologies currently available to minimise their impact. Technologies for the treatment of soils and sediments in-situ (landfarming, bioscreens, bioventing, nutrient injection, phytoremediation) and ex-situ (landfarming, bio-heap treatment, soil suspension reactor) will be discussed. The microbiological, process technological and socio-economical aspects of these technologies will be addressed. Special attention will be given to novel biotechnological processes that utilise sulfur cycle conversions, e.g. sulfur and heavy metal removal from soils. Also the potential of phytoremediation will be highlighted. In addition, treatment schemes for the clean-up of polluted megasites, e.g. harbours and Manufactured Gaswork Plants (MGP), will be elaborated. The aim of Soil and Sediment Remediation is to introduce the reader in: the biogeochemical characteristics of soil and sediments- new techniques to study soil/sediment processes (molecular probes, microelectrodes, NMR) clean up technologies for soils polluted with organic (PAH, NAPL, solvents) or inorganic (heavy metals) pollutants- preventative and remediative strategies and technologies available in environmental engineering novel process applications and bioreactor designs for bioremediation the impact of soil pollution on society and its economic importance.

The Science and Engineering of Materials - Donald R. Askeland 2013-11-11

The Science and Engineering of Materials, Third Edition, continues the general theme of the earlier editions in providing an understanding of the relationship between structure, processing, and properties of materials. This text is intended for use by students of engineering rather than materials, at first degree level who have completed prerequisites in chemistry, physics, and mathematics. The author assumes these students will have had little or no exposure to engineering sciences such as statics, dynamics, and mechanics. The material presented here admittedly cannot and should not be covered in a one-semester course. By selecting the appropriate topics, however, the instructor can

emphasise metals, provide a general overview of materials, concentrate on mechanical behaviour, or focus on physical properties. Additionally, the text provides the student with a useful reference for accompanying courses in manufacturing, design, or materials selection. In an introductory, survey text such as this, complex and comprehensive design problems cannot be realistically introduced because materials design and selection rely on many factors that come later in the student's curriculum. To introduce the student to elements of design, however, more than 100 examples dealing with materials selection and design considerations are included in this edition.

El Instituto Interamericano de Cooperación Para la Agricultura (iica) -

The Globalization of Poverty and the New World Order - Michel Chossudovsky 2003

In this new and expanded edition of Chossudovsky's international best-seller, the author outlines the contours of a New World Order which feeds on human poverty and the destruction of the environment, generates social apartheid, encourages racism and ethnic strife and undermines the rights of women. The result as his detailed examples from all parts of the world show so convincingly, is a globalisation of poverty. This book is a skilful combination of lucid explanation and cogently argued critique of the fundamental directions in which our world is moving financially and economically. In this new enlarged edition -- which includes ten new chapters and a new introduction -- the author reviews the causes and consequences of famine in Sub-Saharan Africa, the dramatic meltdown of financial markets, the demise of State social programs and the devastation resulting from corporate downsizing and trade liberalisation. The book has been published in 11 languages. Over 100,000 copies sold world-wide.

Strengthening Value Chains as an Industrial Policy Instrument - United Nations. Economic Commission for Latin America and the Caribbean 2014

This publication presents the recent experience of the Economic Commission for Latin America and the Caribbean (ECLAC) in respect of industrial policy design and technical assistance for the Governments of two Central American countries: El Salvador and Guatemala. It adopts a value chain approach to identify in detail the restrictions facing these chains, both as a whole and at each of their links. Strategies aimed at strengthening value chains are participatory (public-private) and act as a driver of structural change by boosting productivity and value added, especially among small producers.
