Screening for Depression in Clinical Practice - Alex J. Mitchell, MRC Psych 2009-12-02

Mood disorders are a global health issue. National guidance for their detection and management have been published in the US and in Europe. Against the backdrop of this problem, the editors of this volume have designed a book with a dynamic two-fold purpose: to provide an evidence-based overview of screening methods for mood disorders, and to synthesize the evidence into a practical guide for clinicians in a variety of settings--from cardiologists and oncologists, to primary care physicians and neurologists, among others. The volume considers all important aspects of depression screening, from the overview of specific scales, to considerations of technological approaches to screening, and to the examination of screening with neurological disorders, prenatal care, cardiovascular conditions, and diabetes and cancer care, among others. This book is sure to capture the attention of any clinician with a stake in depression screening.

Natural Labor and Birth: An Evidence-Based Guide to the Natural Birth Plan - Michelle Aristizabal 2018-09-14

The first evidence-based book covering natural childbirth practices written by an obstetrician Natural birth plans have emerged as a battle cry of resistance among women who are dissatisfied with today's medically-aggressive model of maternity care and high cesarean section rates. However, natural birth does not need to be a source of controversy or conflict between women and their nurses and doctors. Natural Labor and Birth: An Evidenced-Based Guide to the Natural Birth Plan seeks to broaden the medical community's understanding of the motivations and needs of naturally laboring mothers, while also exploring why natural birth is often so difficult to achieve within our current system and what can be done to change that. It is a complete resource on the topic of natural childbirth, teaching healthcare providers and other birth workers the skills necessary to assist a woman through an unmedicated birth and reviewing the compilation of medical evidence in support of those methods. It demonstrates how natural birth can exist within the framework of traditional antepartum care and hospital deliveries, and offers alternative solutions to common challenges that often disrupt the physiologic birth process. Natural Labor and Birth: An Evidenced-Based Guide to the Natural Birth Plan is also an unbiased resource for pregnant women seeking a more thorough and scientific understanding of unmedicated birth. This guide will help women and their partners make their own birth plans from a truly informed place. It will help women understand the barriers they may face when seeking a natural birth and give them the ability to better communicate their needs and preferences.

By creating room for natural birth within our maternity system, this book will help readers build a community of care where all women feel respected, acknowledged, and empowered during their birth experience.

Algorithms for Obstetrics and Gynaecology - Sambit Mukhopadhyay 2014

Algorithms in Obstetrics and Gynaecology presents the core knowledge needed to tackle all situations in obstetrics and gynaecology, in a structured fashion. All algorithms are designed to support rapid decision making in the most clinically relevant situations to minimise the risks of a poor outcome. A range of clinical problems are covered from common non-life-threatening emergencies such as hyperemesis in pregnancy, to life-threatening acute events such as ectopic pregnancy, acute fetal distress or maternal collapse. Each topic is presented as either an algorithm, a care pathway, or table of key information and has been carefully structured to ensure a logical progression of thought to aid anticipation, early diagnosis and prompt and appropriate management. Accompanying key learning points highlight the essential information from the topic. Based on current national guidelines and clinical evidence, the algorithms and care pathways can be used as a reliable and practical resource for day to day practice in obstetrics and gynaecology.
