The Enchantment of Western Herbal Medicine - Guy Waddell 2020-01-30

Through interviews with British herbalists, the importance of hidden experiences of meetings with plants is explored alongside how such 'enchantment' has influenced the narrative of their lives. Some herbalists have

visible entryways into studying, such as personal experience of taking herbal medicine, a search for a new career or a love of nature. Other entryways are more hidden, with many noting 'crossings' and 'callings' with plants at a young age. This sensual ability of herbs raises questions about the agency of living plants and of herbal medicines, and about how the relationship between herbalists and plants may be reconceived. Meetings with plants and herbal medicines allow herbalists to draw easily from a diverse range of influences that others may see as incommensurable."This fascinating, original and challenging book convincingly explores modern-day herbalists understanding of their place in the complementary health world, against the backdrop of encroaching professionalisation, legitimacy and scientism. In his case study interviews with herbalists, Guy Waddell draws our attention to the enchanting power of plants and their agentic qualities. In his quest for greater understanding of their sensual power, the author rejects the conventional modernity/rationalisation thesis, seen both in the sensual- affective energy that herbalists draw upon and in the ontological implications of human/nonhuman crossings. This book is an excellent contribution to our understanding of Western herbal medicine and contemporary thought." - Dr Stuart McClean, PhD. Associate Professor in Public Health (Health and Wellbeing), University of the West of England" In the field of herbal medicine, few seem to know their history and the lessons it teaches us. In The Enchantment of Western Herbal Medicine, Dr Guy Waddell not only provides the reader with a detailed history of the trials and triumphs of British Phytotherapy, but also travels into uncharted territory looking at how herbalists come to find their passion for plants and the use of them to help heal others. This is a new area of research and exploring the entryways to practice through interviews and clinician narratives is both a fascinating undertaking and a unique way of understanding our own motivations and experiences as herbalists." - David Winston, RH(AHG), DSc (hc), author of Adaptogens; Herbs for Strength, Stamina and Stress Relief"Both compelling and challenging, Guy Waddell's unique book is filled with the voices of herbalists and makes essential reading for anyone on their own journey into herbalism or those interested in human- plant relationships. Here is a much-needed roadmap for all who are exploring the diverse choices between ancient and modern, science and tradition, evidence and intuition, and human and nonhuman agency. My congratulations to the author for so brilliantly signposting the fundamental unity that resides at the heart of herbal practice." - Phil Deakin. President of the National Institute of Medical Herbalists

Some Drugs and Herbal Medicines - International Agency for Research on Cancer 2016-07-18

This volume of the "IARC Monographs" provides an assessment of the carcinogenicity of 14 drugs and herbal products. The IARC Monographs Working Group relied mainly on epidemiological studies to evaluate the carcinogenic hazard to humans exposed to the drugs digoxin (widely prescribed for the treatment of chronic heart failure), pioglitazone (used for the treatment of type 2 diabetes mellitus), and hydrochlorothiazide (used to treat hypertension). Other agents evaluated included the drugs primidone, sulfasalazine, pentosan polysulfate sodium, and triamterene, and five herbal products (or their components): Aloe vera whole leaf extract, goldenseal root powder, Ginkgo biloba leaf extract, kava extract, and pulegone. In view of the limited agent-specific information available from epidemiological studies, assessments of these agents relied mainly on carcinogenicity bioassays to reach conclusions as to the carcinogenic hazard to exposed humans.

The Handbook of Alternative and Complementary Medicine - Stephen Fulder 1996

The Handbook examines the developing social position of alternative medicine, including legal, political, scientific, educational, and demographic aspects, and considers why people choose complementary therapies, how many do so, and what happens during and after their treatment. For each therapy, there is a concise review of the theoretical, practical, and research aspects, written in collaboration with a leading practitioner, and providing an authoritative introduction to the field. The book also includes an invaluable resource guide, covering all the significant colleges, professional bodies, and societies in this area of medicine, and detailing over 250 organizations, as well as an extensive glossary and bibliography. This third edition has been extensively rewritten, expanded, and updated, and reflects the dramatic increase in complementary medicine over the past few years - in the UK alone there are more alternative practitioners than general practitioners now. It charts the growing level of interest among medical professionals and the general public; the coverage of research has been extended; new sections have been added dealing with the UK National Health Service and education. The Handbook is an invaluable reference source for all medical practitioners, including nurses, researchers, and administrators, as well as members of the general public who want to make an informed choice about complementary medicine.
