American Military Training Aircraft - E.R. Johnson 2015-02-18

The U.S. did not become the world's foremost military air power by accident. The learning curve--World War I, World War II, the Korean

War, the Vietnam War, the Gulf War, and more recently the war on terror--has been steep. While climbing this curve, the U.S. has not only produced superior military aircraft in greater numbers than its foes, but has--in due course--out-trained them, too. This book provides a comprehensive historical survey of U.S. military training aircraft, including technical specifications, drawings and photographs of each type of fixed and rotary-wing design used over a 98-year period to accomplish the first step of the learning process: the training of pilots and aircrews.

Texas Warbird Survivors 2003 - Harold A. Skaarup 2002-12-16

Many examples of aircraft that saw service in the various armed forces of the United States are currently being restored to flying status or preserved in museums in the state of Texas. Some of them have significant war records, and a few are currently standing as gate guardians outside their former airbases. These Warbirds are a permanent part of our modern history, and they deserve to be remarked upon and remembered. This handbook provides a simple checklist of where the surviving military aircraft in Texas are located now, along with a few photographs and a brief history of their service in the US military. This book should spark your interest in some of the military aviation history that can be found in this warm and friendly state on Americas Gulf Coast. Texas Warbird Survivors is specifically intended to provide a

where are they guide for residents and visitors to Texas who are interested in its rich resources of historical military aircraft. Contact numbers are provided for the museums, should you be interested in learning more about each aircraft. Perhaps you will then choose to visit these museums in order to appreciate the rich resources of aviation heritage preserved on your behalf.

Japan's Economic Planning and Mobilization in Wartime, 1930s-1940s - Yoshiro Miwa 2015-01-22

"Although most economists maintain a mistrust of a government's goals when it intervenes in an economy, many continue to trust its actual ability. They retain, in other words, a faith in state competence. For this faith, they adduce no evidence. Sharing little skepticism about the government's ability, they continue to expect the best of governmental intervention. To study government competence in World War II Japan offers an intriguing laboratory. In this book, Yoshiro Miwa shows that the Japanese government did not conduct requisite planning for the war by any means. It made its choices on an ad hoc basis and the war itself quickly became a dead end. That the government planned for the war incompetently casts doubts on the accounts of Japanese government leadership more generally"--
