Elementary Science Methods: A

Constructivist Approach - David Jerner Martin
2012-12-20

The text that pioneered a constructivist approach to elementary science teaching is based on two fundamental and complementary ideas: that it's more important for children to learn how to do science than to learn about science, and that elementary science teachers needing to know a great deal of science, but rather should be co-inquirers with their students. ELEMENTARY SCIENCE METHODS: A CONSTRUCTIVIST APPROACH, Sixth Edition, features a wealth of exercises, including open-ended inquiry activities that help teacher candidates construct their own conceptualizations about science content and teaching methods. More than 170 process-oriented, open-ended activities, organized by grade level, can be used to encourage children to develop and perform their own investigations. All activities and much of the text content are clearly linked to National Science Education Standards (NSES) for content, professional development, assessment, and teaching. Also included are suggestions for appropriate children's literature to encourage interdisciplinary learning. The book's website, Education CourseMate, provides valuable tools and resources such as additional activities and video clips that students can use both in their college course and later in elementary science classrooms. The Lawful and the Prohibited in Islam -

Yusuf al-Qaradawi 2013-10-11

Since its first publication in 1960, this famous work by Yusuf al-Qaradawi has enjoyed a huge readership in the Muslim world, and has been translated into many languages. It answers questions which may face the Muslims today, and refutes the ambiguities and lies about Islam. Curriculum Development and Design -

Murray Print 2020-08-07

This book has been written to provide a current, practical, Australian-based approach to designing and developing curriculum. The

demands of schools and educational systems today are such that teachers with practical curriculum skills are highly valued and this book provides a vital source for teachers who wish to build their skills in the field of curriculum design and development. The book addresses the needs of curriculum developers by examining the nature of the curriculum process and how it can be applied in schools. A particular strength is the way in which the chapters are structured around a model of curriculum development. As the model unfolds the reader is familiarised with the various elements of curriculum including situational analysis, intent, content, learning activities and evaluation. Teachers will appreciate the value of understanding these elements and in so doing will acquire valuable skills of curriculum design and development. A feature of this book is that it addresses the issues of curriculum implementation and curriculum change. To devise a curriculum document in these times is tough enough. Those who wish to see their curricula succeed must be involved with implementing that curriculum and the curriculum change that results. This important new book is particularly appropriate to classroom teachers, system developers and student teachers studying curriculum.

Excellent 11 - Ron Clark 2004-08-01

When *The Essential 55* was published, Ron Clark became a tireless promoter, traveling the country to speak to large groups of teachers and fans. And when his Oprah appearance shot the book onto the New York Times bestseller list, he kept the heat on. We can expect the same tenacious commitment to promoting his follow-up book, *The Excellent 11*. *The Excellent 11* contains eleven sections, with each one focusing on a theme directly related to teaching and raising children. Ron Clark draws from his own experience to give advice, telling personal stories that demonstrate the significance of each theme within the learning environment--an environment that extends beyond the classroom and into the larger world. Using themes ranging from Adventure, Ingenuity, and Humor to Dedication, Creativity, and Love, Clark provides a road map for both parents and teachers who want to enrich their children's learning experiences.

Curriculum - Colin J. Marsh 2007

This compact, scholarly book treats creating a curriculum as an ongoing process, the product of which is a composite of what is intended (planned curriculum), what actually happens (enacted curriculum), and how what happens influences those involved (experienced curriculum). It proposes that desirable educational experiences arise when the interaction of these three curricula is flexible and evolving; and, therefore, the authors never advance specific, "best" practices or "most correct" answers to fundamental curriculum questions. Rather, through a finely honed discussion of essential theoretical and practical alternatives, they invite readers to develop their own points of view. Major discussions of postmodernism, autobiographical techniques, gender, and race. The book also includes coverage of recent actions by state governing agencies and boards of education and aligning curriculum with state standards. For professionals in the field of teaching.

Intelligence Reframed - Howard E. Gardner
2000-09-18

Harvard psychologist Howard Gardner has been acclaimed as the most influential educational theorist since John Dewey. His ideas about intelligence and creativity - explicated in such bestselling books as *Frames of Mind* and *Multiple Intelligences* (over 200,000 copies in print combined) - have revolutionized our thinking. In his groundbreaking 1983 book *Frames of Mind*, Howard Gardner first introduced the theory of multiple intelligences, which posits that intelligence is more than a single property of the human mind. That theory has become widely accepted as one of the seminal ideas of the twentieth century and continues to attract attention all over the world. Now in *Intelligence Reframed*, Gardner provides a much-needed report on the theory, its evolution and revisions. He offers practical guidance on the educational uses of the theory and responds to the critiques leveled against him. He also introduces two new intelligences (existential intelligence and naturalist intelligence) and argues that the concept of intelligence should be broadened, but not so

absurdly that it includes every human virtue and value. Ultimately, argues Gardner, possessing a basic set of seven or eight intelligences is not only a unique trademark of the human species, but also perhaps even a working definition of the species. Gardner also offers provocative ideas about creativity, leadership, and moral excellence, and speculates about the relationship between multiple intelligences and the world of work in the future.
