Poison, Medicine, and Disease in Late Medieval and Early Modern Europe - Frederick W Gibbs 2018-07-20
This book presents a uniquely broad and pioneering history of premodern toxicology by exploring how late medieval and early modern (c. 1200-1600) physicians discussed the relationship between poison, medicine, and disease. Drawing from a wide range of medical and natural philosophical texts—with an emphasis on treatises that focused on poison, pharmacotherapeutics, plague, and the nature of disease—this study brings to light premodern physicians' debates about the potential existence, nature, and properties of a category of substance theoretically harmful to the human body in even the smallest amount. Focusing on the category of poison (venenum) rather than on specific drugs reframes and remixes the standard histories of toxicology, pharmacology, and etiology, as well as shows how these aspects of medicine (although not yet

formalized as independent disciplines) interacted with and shaped one another. Physicians argued, for instance, about what properties might distinguish poison from other substances, how poison injured the human body, the nature of poisonous bodies, and the role of poison in spreading, and to some extent defining, disease. The way physicians debated these questions shows that poison was far from an obvious and uncontested category of substance, and their effort to understand it sheds new light on the relationship between natural philosophy and medicine in the late medieval and early modern periods.

Milk-quality Improvement Program for 4-H Clubs - C. J. Babcock 1932

The milk-quality improvement program outlined in this publication is designed to acquaint members of 4-H dairy clubs and other junior clubs with the importance of quality in milk, both from the economic standpoint of the producer and from the health standpoint of the consumer, and to teach these young people the essentials in the production of high-quality milk.

Botanical Exploration Southern Africa - Mary Gunn 1981-06-01

This text gives biographical accounts of the leading plant collectors and their activities in Southern Africa from the days of the East India Company until modern times.

Fowler's Zoo and Wild Animal Medicine Current Therapy, Volume 10 - E-Book - Eric R. Miller 2022-07-08

Fowler's Current Therapy format ensures that each volume in the series covers all-new topics with timely information on current topics of interest in the field. Focused coverage offers just the right amount of depth — often fewer than 10 pages in a chapter — which makes the material easier to access and easier to understand. General taxon-based format covers all terrestrial vertebrate taxa plus selected topics on aquatic and invertebrate taxa. Updated information from the Zoological Information Management System (ZIMS) includes records from their growing database for 2.3 million animals (374,000 living) and 23,000 taxa, which can serve as a basis for new research. Expert, global contributors include authors from the U.S. and 25 other countries, each representing trends in their part of the world, and each focusing on the latest research and clinical management of captive and free-ranging wild animals.

CRC World Dictionary of Medicinal and Poisonous Plants - Umberto Quattrocchi 2016-04-19

"Following on the successes of two previous dictionary projects, the CRC World Dictionary of Plant Names and the CRC World Dictionary of the Grasses, Umberto Quattrocchi has undertaken this dictionary of economically important plants.... He has done for these plants what was so admirably done in his other works—brought the vast and scattered literature on plant names, and in this case, too, their uses, into coherent order so that the inquisitive scholar can get a foothold." —From the Foreword, Donald H. Pfister, Harvard University and Harvard University Herbaria, Cambridge, Massachusetts
The CRC World Dictionary of Medicinal and Poisonous Plants: Common Names, Scientific Names, Eponyms, Synonyms, and Etymology provides the starting point for better access to data on plants used around the world in medicine, food, and cultural practices. The material found in the five volumes has been painstakingly gathered from papers of general interest, reports and records, taxonomic revisions, field studies, herbaria

and herbarium collections, notes, monographs, pamphlets, botanical literature, and literature tout court. It includes sources available at various natural history libraries, floras and standard flora works, local floras and local histories, nomenclatural histories, and the International Code of Botanical Nomenclature. Much more than a dictionary, the book provides the names of thousands of genera and species of economically important plants, concise summaries of plant properties, and appropriate observations about medicinal uses. Drawing from a tremendous range of primary and secondary sources, it is an indispensable time-saving guide for all those involved with botany, herbal medicine, pharmacognosy, toxicology, medicinal and natural product chemistry, and agriculture.

Guam National Seashore, Proposed Master Plan - 1967

Gardeners' Chronicle - 1857

Pristina Medicamenta - Jerry Stannard 1999

Jerry Stannard assembled a legendary collection of materials on the history of botany from Homer to Linnaeus, and his mastery of the field was acknowledged as incomparable. However, his work was sadly cut short by his death, and so did not result in the ultimate synthesis he envisioned; the present volume, and its companion, *Herbs and Herbalism in the Middle Ages and the Renaissance*, bring together his important output in articles and studies. In this selection of papers on pharmacy and medical botany, from the classical period to 1500, Stannard combined philological expertise with the scientific perspective of modern

pharmacology to measure the descriptive accuracy and therapeutic efficacy of *Materia Medica* from Hippocrates to the Renaissance. His sources included not only the obvious technical treatises but also works of literature and the traditions of folklore especially in Italy. Three studies of the scholastic botany of Albertus Magnus form the centerpiece of the collection, and the detailed indexes cover both common and scientific names of plants.

A Selected Guide to the Literature of the Flowering Plants of Mexico - Ida Kaplan Langman 2018-01-09

This bibliography is a guide to the literature on Mexican flowering plants, beginning with the days of the discovery and conquest of Mexico by the Spaniards in the early sixteenth century.

Geographical Guide to the Floras of the World: Africa, Australia, North America, South America and Islands of the Atlantic, Pacific, and Indian Oceans - Sidney Fay Blake 1942

Boys' Life - 1978-04

Boys' Life is the official youth magazine for the Boy Scouts of America. Published since 1911, it contains a proven mix of news, nature, sports, history, fiction, science, comics, and Scouting.

New Scientist - 1984-09-20

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

Geographical Guide to Floras of the World - Sidney Fay Blake 1942

Adirondack Upland Flora - Michael Kudish 1992

Experiment Station Record - United States. Office of Experiment Stations 1903

Handbook of Clinical Toxicology of Animal Venoms and Poisons - Julian White 2017-11-22

The Handbook of Clinical Toxicology of Animal Venoms is the first concise, one-volume book devoted to this important subject. The editors are internationally recognized authorities in the biology and clinical aspects of venomous and poisonous animals, and the chapter authors are world leaders in their respective fields of toxicology. All aspects of the topic are covered including information on the biology and taxonomy of poisonous animals, their venom or poison, diagnosis, and general treatment principles and specific treatment. The most up-to-date list of available antivenoms is provided. Coverage of venomous and poisonous animals is comprehensive, with thorough discussions on shellfish poisoning, ciguatera, fugu, coelenterates, stingrays, venous fish, blue-ringed octopus, sea-snakes, scorpions, spiders, insects, and gila lizards. Individual chapters focus on snakes and snakebite in Europe, Africa, Asia, Australia, North America, Central America, and South America. Nearly all clinical chapters have been written by clinicians with extensive experience treating the particular type of animal envenoming or poisoning under consideration. No other book brings together such a wealth of information in this field, and no other book provides it in a format useful to clinicians charged with the responsibility of treating envenomed or poisoned patients. The Handbook of Clinical Toxicology of Animal Venoms is an essential addition to all medical libraries, emergency departments, toxicology departments, poison information centers, and invaluable to all professionals working in these fields.
