A Look at Zambia's Road Financing Strategies: The Impact of Incongruent Policies and Budgets
- Yohane Tembo 2015-01-01

There are various reasons why the road asset in Zambia has been deteriorating over the past five decades since independence. Much effort to restore the road asset to its original value and keep it maintained in a good and safe condition

was initiated in mid 1990s with the launch of the Road Sector Investment Plan - Phase I, which was immediately followed by the launch of a Phase II to run from 2003 to 2013. It is my appreciation that many diagnostic studies into road financing strategies which could have led to inefficient road asset management in Zambia have been undertaken, and various solutions tendered. The author takes cognizance that resource mobilization for road construction and maintenance, and subsequent allocation to respective road programs can often be problematic for an emerging country like Zambia. It has the potential to lead to inefficiencies in road asset management as has evidently been demonstrated in the declining road asset value over time. The political, as well as the economic, landscape plays a vital role in resource mobilization and allocation strategies as much as the institutional and the legal framework do. The failure to clear the backlog of maintenance which normally results, largely,

from deferment of scheduled maintenance due to insufficient annual budgetary allocation to the road sector maintenance programs has led to the significant deterioration in road network condition. Exorbitant road construction costs have posed additional challenges to the fiscus, thereby constraining both the quantity and quality of road infrastructure that could be constructed and maintained at any given time. Recent policy drives have been categorical in their preference of new road construction aimed at linking Zambia, over road maintenance, which plays a pivotal role in road asset management. This creates a perception that policy pronouncements are at variance to policy documents which promote sustainable economic development through efficient road investments and could be seen as being paradoxical in that the actual financing strategies are skewed towards road construction, a recipe of comfort for the next election challenge due to increased visibility on the ground, rather than to

maintenance, as an astute and effective way of managing the road asset. The difficulty of establishing congruence between government pronouncements and actual road business strategies in the implementing agencies has, over the [...]

Hypercrime - Michael McGuire 2007-12-06

Hypercrime develops a new theoretical approach toward current reformulations in criminal behaviours, in particular the phenomenon of

cybercrime. Emphasizing a spatialized conception of deviance, one that clarifies the continuities between crime in the traditional, physical context and developing spaces of interaction such as a 'cyberspace', this book analyzes criminal behaviours in terms of the destructions, degradations or incursions to a hierarchy of regions that define our social world. Each chapter outlines violations to the boundaries of each of these spaces - from those defined by our bodies or our property, to the more subtle borders of the local and global spaces we inhabit. By treating cybercrime as but one instance of various possible criminal virtualities, the book develops a general theoretical framework, as equally applicable to the, as yet unrealized, technologies of criminal behaviour of the next century, as it is to those which relate to contemporary computer networks. Cybercrime is thereby conceptualized as one of a variety of geometries of harm, merely the latest of many that have extended

opportunities for illicit gain in the physical world. Hypercrime offers a radical critique of the narrow conceptions of cybercrime offered by current justice systems and challenges the governing presumptions about the nature of the threat posed by it. Runner-up for the British Society of Criminology Book Prize (2008).

Total Quality Management in Education - Marmar Mukhopadhyay 2020-07-01

This is a complete revised edition of a popular text on Total Quality Management (TQM). First published in 2001, the book has been translated into many languages and highly praised by readers globally. In spite of the difficulties in defining and capturing 'quality' in a framework, the author admirably succeeds in helping readers to understand the role of TQM in improving the quality of education. The book combines extensive literature review with the author's own experience as an institution builder and his experiments on quality management to develop a practical guide for quality

improvement for institutional leaders. The book introduces Shewhart, Lewin, Deming, Juran, Crosby, Ishikawa, Taguchi and a number of other quality gurus to the readers. It proposes a new set of TQM principles that a good leader

should apply. Enriched with several examples from the field situation and local metaphors, Total Quality Management in Education is an easy read and a must-have practical guide to quality management.
