The Economics of American Universities -

Stephen A. Hoenack 1990-01-01

This book discusses the adjustment of universities to the changing financial environment. Its authors analyze the relationship between higher education inputs and outputs, assess the available information about the determinants of university costs, survey the influence of market conditions and pricing strategies on students' demands for attendance at institutions of higher education, summarize research on the objectives for

institutions of higher education held by different participants and funders, analyze how universities determine their priorities and relative funding for different activities and disciplines, and explore the economics of universities' research functions. In addition, the book addresses three questions regarding the external fiscal environment facing American universities. What are the recent and emerging changes in the key economic variables affecting these institutions? What mechanisms have universities used in the past to cope with tighter financial constraints? What are the implications for university research activities as these institutions adjust to their fiscal constraints?

Whalen 1991

This book is refreshing in many ways. . . . it calls attention to a most important and timely topic . . . in a conversational and witty manner . . . Considering the subject, this is a most pleasant read. --Journal of Higher Education Notoriously unbusinesslike in their budgeting and management techniques, colleges and universities need a rational tool for sound fiscal management. This book, based on Indiana University's shift to responsibility center budgeting in 1987, treats both the conceptual and the philosophical bases for the system together with ground-level experience. The bottom line: a decentralized, incentive-based approach to budgeting empowers deans and other center managers to accomplish their missions in a more efficient manner.

Research on Investment Scale and Allocation Structure of Chinese Higher Education Finance -

Yongmei Hu 2021-12-31

Based on a systematic literature review, the book aims to forecast the investment scale of Chinese higher education and the allocation structure of different types of higher education institutions in the next decade. The authors first introduce the complex setting of Chinese higher education finance, including the background and theoretical foundation, as well as an in-depth literature review. Via international comparative data, they explore the adequacy and equity of the financial resources. By applying quantitative methods, such as panel data analysis and time series analysis, they forecast the public investment scale in higher education and the allocation structure and proportion among different types of higher education institutions. In addition, the book investigates the standards of teaching funding and teacher research funding, which are considered the main funding resources of Chinese universities and individual teachers. As China has become the world's

largest country of higher education, "how to provide adequate and equal funds to meet the increasing demand" is of great interest to scholars and policymakers both from China and abroad. The book will also appeal to postgraduate students who would like to know the overall status of Chinese higher education finance.

Learning From Media 2nd Ed. - Richard E. Clark
2012-06-01

Richard Clark's observation that "...media are

mere vehicles that deliver instruction but do not influence student achievement any more than the truck that delivers our groceries causes changes in our nutrition” is as misunderstood today as it was when first published in the Review of Educational Research in 1983. The convincing if little read scientific evidence presented by Clark has divided the field and caused considerable concern, especially among the providers of newer media for learning. A collection of writings about the “media effects debate,” as it has come to be called, was published in 2001. Edited by Clark, Learning From Media was the first volume in the series “Perspectives in Instructional Technology and Distance Education.” The series editors are convinced that the writings of Clark and those who take issue with his position are of critical importance to the field of instructional technology, Thus, a revised, second edition of Learning From Media is now being offered. The debate about the impact of media on learning

remains a fundamental issue as new mediated approaches to teaching and learning are developed, and Clark’s work should be at the center of the discussion. The critical articles on both sides of this debate are contained in Learning From Media, 2nd Edition.

Cutting Costs and Generating Revenues in Education - Tim L. Adsit 2011

At no time in the history of public education has there been such a dramatic discrepancy between accelerated standards and expectations and

adequate funding for our schools. Much has been written about how to achieve new expectations in the realm of student achievement. Much has also been written about the need for accountability and the restructuring of how education dollars are spent. Unfortunately, most of the input regarding the need for 'belt-tightening' is unaccompanied by any tangible solutions or suggestions and results only in hollow rhetoric or convenient political sound bytes. Tim Adsit and George Murdock's journey into meaningful avenues for cost-savings in public education is clearly an exception. In this book, readers will find many practical ideas for saving money, which can be readily implemented.

The Cost-Effectiveness of 22 Approaches for Raising Student Achievement - Stuart S. Yeh
2011-03-01

As a consequence of the federal "No Child Left Behind" (NCLB) law, there is tremendous pressure on school principals, teachers, school superintendents, district staff, state departments of education and governors to maximize the increase in student achievement that is obtained with every dollar of expenditure. Currently, teachers are forced to rely on extremely inefficient approaches that take enormous amounts of time, both during the school day and throughout the K-12 learning years. This is experienced in terms of the reduced time that is available to teach subjects other than math and reading, as schools resort to double periods of math, double periods of reading, and enormous amounts of remedial instruction that directly reduce the time available for other subjects including science, art, and music. In contrast,

this book suggests that student achievement may be increased in a way that is not only cost-effective in dollar terms, but efficient in the sense that it does not rely on unusual investments in the time required to obtain results. The book draws upon a wealth of cost-effectiveness data to dispel common notions about "what works" in addressing the achievement gap: increased expenditure per pupil, charter schools, voucher programs, increased educational accountability, class size reduction, comprehensive school reform, increased teacher salaries, more selective teacher recruitment, the use of "value-added" methods to measure and reward teacher performance, the use of National Board teacher certification to identify high-performing teachers, and a host of other approaches. Cost Accounting - V. Rajasekaran 2010-09
The book sets a new standard for cost accounting textbooks. It aims at equipping students with a solid grounding in the concepts

of cost accounting. With rich pedagogy and an easy-to-understand approach, it meets the specific requirements of the undergraduate students of different Indian universities. This book can also be useful for the students of CA, CS, MBA and ICWA level of Indian universities.

As the centre of world economic development has shifted towards Asia over the last two decades, many Asian countries have witnessed rapid growth in economic and business

operations. In light of these recent changes, accounting has played a significant role in assisting economic transition and advancement in Asian countries. However, although the general trend over recent decades towards convergence in financial reporting standards and practices has dramatically improved the comparability of accounting information, considerable variances remain in practices between countries. This Handbook therefore provides an up-to-date review of contemporary accountancy across Asia, illustrating how standards have been reshaped to accommodate the needs of economic and social trends. As well as providing an overview of standards in the larger Asian economies of China, India and Japan, contributions to the Handbook also include studies of countries such as Sri Lanka, Nepal, Cambodia and Mongolia. In particular, this Handbook analyses: financial accounting and reporting management accounting auditing and accounting professionalization

Communication in Accounting Education -

Richard M.S. Wilson 2016-04-14

Accounting, often described as "the language of business", requires a diverse set of written, listening and oral communication skills if those who practise it are to be effective. Given the pace of change relating to, for example, the evolution of international accounting standards and the demands for greater transparency, accountants must be clear, responsive, and audience-focussed communicators. Employers of accountants consistently comment on the need

for their new graduate recruits and trainees to have strong written, oral, and interpersonal communication skills. In this light accounting educators face the challenge of designing and delivering programmes that reflect professional expectations on the part of employers and clients, and educating students on how to make informed communication choices in order to achieve desired results and to build good working relationships. The chapters in this book deal with such topics as accounting students' perceptions of oral communication skills; competence-based writing skills; and the development of listening skills. This book was originally published as Accounting Education: an international journal.
