Designing Cost Management Systems to Support Business Decision-Making - Pieter Buys
2021-07-19

This book illustrates the importance effective cost management systems in providing a supportive environment in which reliable and relevant management information can be generated. Such a cost management system is only attainable if the importance of key business, operational and stakeholder requirements are recognised within the organisational context. In illustrating this importance, this book provides several case studies as examples thereof. The

first two case studies focus on the engineering sector and illustrates the development of a cost management system in a water recycling context; and the design of a budgetary system in a mining engineering context. The remaining case studies focus on the services sector, including cost management systems for a digital technology services provider and a medical insurance services provider; an alternative activity-based costing approach for a public sector services provider; and finally a re-designed value stream for an automotive services provider. Academic researchers and industry managers in the fields of management accounting and financial management, as well as engineering and operations management, will find value in the experiences described herein.

Hence the book provides accounting students and researchers a solid grounding in a broad range of highly relevant non-technical accounting themes, looking at the bigger environment in which future accountants will be operating, involving considerations of strategic corporate governance issues and highlighting competences beyond the standard technical accounting skill sets.

The Impact of Local Government Modernisation Policies on Local Budgeting-CIMA Research Report - W. B. Seal 2008-07-18

This CIMA research report focuses on post-1997 policy innovations for the public sector and their

impact on traditional budgeting practices. In light of recent failures to reform local budgeting post 1997, it seeks to distinguish between original intentions of reform and their consequences offering alternatives to local government modernisation, appropriate changes in strategic partnerships, and new organisational structures. The key question for the report is the extent to which it is possible or useful to reform traditional practices, paying particular emphasis to the nature of modernisation in the governmental post 1997 period. The report includes an in-depth investigation into two case authorities in the UK. The analysis will include findings from sources beyond the finance divisions of these authorities. The study is comprehensive, insightful and practical focussed. The authors concentrate their investigation on a longitudinal field study of budgetary practice in two large and contrasting English local and produce a detailed comparison of the two cases. The report

concludes with recommendations to users of local government budgeting. The final chapter discusses the comparison of the two cases. It provides us with a number of concluding observations: e.g.* There is a need for more participation in budgeting and especially a more credible system for schools to get involved in the budget setting process and if the school's budgeting system is to remain centralise dor become even more centralised then policy makers need to have a better knowledge of educational cost drivers * A pioneering study evaluating individual service areas as opposed to ranking of overall corporate performance and offering a pragmatic solution to local government modernisation * The first comprehensive investigation of two vastly different geographical locations of UK * Aids understanding by analysing and producing a detailed comparison of two local authorities Financial Reporting, 4th Edition - Janice Loftus 2022-09-16

Management and Cost Accounting - Andreas Taschner 2020-09-01

Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss

concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting, The book is much more

specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.

not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for management accounting and control. Management Accounting is becoming more and more international. ?Management Accounting and Control? is a new textbook in English covering concepts and instruments of management accounting at an introductory level (primarily at the Bachelor level, but also suited for general management and MBA courses due to a strong focus on practical relevance). This textbook covers all topics that are relevant in management accounting in business organizations that are typically covered in

German and Central European Bachelor courses on management accounting and control. After a general introduction to the field of management accounting and control the book discusses cost management as an extension of cost accounting. Typical cost management instruments such as target costing, life cycle costing and process-based costing approaches are explained in detail. Differences between Anglo-American activity-based costing (ABC) and German process-based costing are highlighted. The book then turns to an extensive discussion of planning and budgeting tasks in management accounting with a strong focus on the practical application of the topic such as developing a budget in practice. Another chapter is dedicated to a comparison of traditional budgeting with modern /alternative budgeting approaches. A major part of the book is dedicated to the broad area of performance management. The relevance of financial statement information for performance management purposes is discussed

in detail. In addition, the most widely spread financial performance indicators are illustrated using real-world examples. The book also includes detailed content on value-based management control concepts.
