together leading scholarly perspectives on how the Internet has been studied and how the research agenda should be pursued in the future. Confronting the Challenges of Participatory Culture - Henry Jenkins 2009-06-05

Many teens today who use the Internet are actively involved in participatory cultures—joining online communities (Facebook, message boards, game clans), producing creative work in new forms (digital sampling, modding, fan videomaking, fan fiction), working in teams to complete tasks and develop new knowledge (as in Wikipedia), and shaping the flow of media (as in blogging or podcasting). A growing body of scholarship suggests potential benefits of these activities, including opportunities for peer-to-peer learning, development of skills useful in the modern workplace, and a more empowered conception of citizenship. Some argue that young people pick up these key skills and competencies on their own by interacting with popular culture; but the problems of unequal access, lack of media transparency, and the breakdown of traditional forms of socialization and professional training suggest a role for policy and pedagogical intervention. This report aims to shift the conversation about the "digital divide" from questions about access to technology to questions about access to opportunities for involvement in participatory culture and how to provide all young people with the chance to develop the cultural competencies and social skills needed. Fostering these skills, the authors argue, requires a systemic approach to media education; schools, afterschool programs, and parents all have distinctive roles to play. The John D. and Catherine T. MacArthur Foundation Reports on Digital Media and Learning

The Story of Silver - William L. Silber 2021-01-12

"This is the story of silver's transformation from soft money during the nineteenth century to hard asset today, and how manipulations of the white metal by American president Franklin D. Roosevelt during the 1930s and by the richest man in the world, Texas oil baron Nelson Bunker Hunt, during the 1970s altered the course of American and world history. FDR pumped up the price of silver to help jump start the U.S. economy during the Great Depression, but this move weakened China, which was then on the silver standard, and facilitated Japan's rise to power before World War II. Bunker Hunt went on a silver-buying spree during the 1970s to protect himself against inflation and triggered a financial crisis that left him bankrupt. Silver has been the preferred shelter against government defaults, political instability, and inflation for most people in the world because it is cheaper than gold. The white metal has been the place to hide when conventional investments sour, but it has also seduced sophisticated investors throughout the ages like a siren. This book explains how powerful figures, up to and including Warren Buffett, have come under silver's thrall, and how its history guides economic and political decisions in the twenty-first century"-- Publisher's description

Regulating the Crypto Economy - Iris H-Y Chiu 2021-10-21

This book focuses on the building of a crypto economy as an alternative economic space and discusses how the crypto economy should be governed. The crypto economy is examined in its productive and financialised aspects, in order to distil the need for governance in this economic space. The author argues that it is imperative for regulatory policy to develop the economic governance of the blockchain-based business model, in order to facilitate economic mobilisation and wealth creation. The regulatory framework should cater for a new and unique enterprise organisational law and the fund-raising and financing of blockchain-based development projects. Such a regulatory framework is crucially enabling in nature and consistent with the tenets of regulatory capitalism. Further, the book acknowledges the rising importance of private monetary orders in the crypto economy and native payment systems that do not rely on conventional institutions for value transfer. A regulatory blueprint is proposed for governing such monetary orders as 'commons' governance. The rise of Decentralised Finance and other financial innovations in the crypto economy are also discussed, and the book suggests a framework for regulatory consideration in this dynamic landscape in order to meet a balance of public interest objectives and private interests. By setting out a reform agenda in relation to economic and financial governance in the crypto economy, this forward-looking work argues for the extension of 'regulatory capitalism' to this perceived 'wild west' of an alternative economic space. It advances the message that an innovative regulatory agenda is needed to account for the economically disruptive and technologically transformative developments brought about by the crypto economy.

Microtrends - Mark Penn 2007-09-05

"The ideas in his book will help you see the world in a new way." -Bill Clinton "Mark Penn has a keen mind and a fascinating sense of what makes America tick, and you see it on every page of Microtrends." -Bill Gates In 1982, readers discovered Megatrends. In 2000, The Tipping Point entered the lexicon. Now, in Microtrends, one of the most respected and sought-after analysts in the world articulates a new way of understanding how we live. Mark Penn, the man who identified "Soccer Moms" as a crucial constituency in President Clinton's 1996 reelection campaign, is known for his ability to detect relatively small patterns of behavior in our culture-microtrends that are wielding great influence on business, politics, and our personal lives. Only one percent of the public, or three million people, is enough to launch a business or social movement. Relying on some of the best data available, Penn identifies more than 70 microtrends in religion, leisure, politics, and family life that are changing the way we live. Among them: People are retiring but continuing to work. Teens are turning to knitting. Geeks are becoming the most sociable people around. Women are driving technology. Dads are older than ever and spending more time with their kids than in the

past. You have to look at and interpret data to know what's going on, and that conventional wisdom is almost always wrong and outdated. The nation is no longer a melting pot. We are a collection of communities with many individual tastes and lifestyles. Those who recognize these emerging groups will prosper. Penn shows readers how to identify the microtrends that can transform a business enterprise, tip an election, spark a movement, or change your life. In today's world, small groups can have the biggest impact.

The High Cost of Free Parking - Donald Shoup 2017-10-20

One of the American Planning Association's most popular and influential books is finally in paperback, with a new preface from the author on how thinking about parking has changed since this book was first published. In this no-holds-barred treatise, Donald Shoup argues that free parking has contributed to auto dependence, rapid urban sprawl, extravagant energy use, and a host of other problems. Planners mandate free parking to alleviate congestion but end up distorting transportation choices, debasing urban design, damaging the economy, and degrading the environment. Ubiquitous free parking helps explain why our cities sprawl on a scale fit more for cars than for people, and why American motor vehicles now consume one-eighth of the world's total oil production. But it doesn't have to be this way. Shoup proposes new ways for cities to regulate parking - namely, charge fair market prices for curb parking, use the resulting revenue to pay for services in the neighborhoods that generate it, and remove zoning requirements for off-street parking. Such measures, according to the Yale-trained economist and UCLA planning professor, will make parking easier and driving less necessary. Join the swelling ranks of Shoupistas by picking up this book today. You'll never look at a parking spot the same way again.

Pattern Recognition and Machine Learning - Christopher M. Bishop 2016-08-23

This is the first textbook on pattern recognition to present the Bayesian viewpoint. No previous knowledge of pattern recognition or machine learning concepts is assumed. Familiarity with multivariate calculus and basic linear algebra is required, and some experience in the use of probabilities would be helpful though not essential as the book includes a self-contained introduction to basic probability theory.

A Cultural History of Money in the Age of Enlightenment - Bloomsbury Publishing 2021-03-11

The Enlightenment was a time of monetary turmoil and transformation in Europe. Change began with a riot of experimentation, including novel ideas about human agency and capacity to promote economic progress, efforts to reframe divinity in terms (like the providential) compatible with market exchange, new instruments of credit, and innovative institutions such as national banks and capital markets. Europeans, including the

settler societies in North America, improvised frantically: people faced the task of everyday exchange in changing media; governments took up the project of creating currencies that supported their political power; artists and writers raced to represent new forms of wealth and interpret the issues they raised; and intellectuals struggled to conceptualize, and tame, patterns of monetary transformation. The result was a rich debate, still unsettled, about the sources of value, the morality of the market, and the very nature of money. Drawing upon a wealth of visual and textual sources, *A Cultural History of Money in the Age of Enlightenment* presents essays that examine key cultural case studies of the period on the themes of technologies, ideas, ritual and religion, the everyday, art and representation, interpretation, and the issues of the age.

Material Culture Matters - John R. Spencer 2014-05-05

Dr. Seymour Gitin is completing his tenure as Director and Dorot Professor at the W. F. Albright Institute of Archaeological Research in Jerusalem. Much of his long career has been spent helping young scholars expand their contacts and hone their skills. This volume is a collection of articles by some of the many developing scholars and Albright fellows with whom Sy has shared his time and knowledge. Their appreciation shows in the quality of their articles, the breadth of their interests, and their dedication to Sy Gitin. The articles range from a discussion of tomb robbing in Palestinian areas, to a geographical analysis of the Shephelah region, to Islamic historical texts, to Israelite cult stands, to Middle Bronze Age burials. In addition, there are several articles by former members of the Tel Miqne-Ekron staff that draw on the finds from that site and further demonstrate Sy's willingness to

mentor and to share the publication of the site's rich trove of materials. This book not only honors Dr. Gitin by the willingness of fellows to contribute to the volume; it also expands our knowledge base of the southern Levant and shows that "Material Culture Matters."
