Concepts of Biology - Samantha Fowler 2018-01-07  
Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As

such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and

vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates

critical thinking and clicker questions to help students understand--and apply--key concepts.

*Science Essentials, High*

*School Level - Mark J.*

Handwerker 2004-12-08

Science Essentials High School Level gives classroom teachers and science specialists a dynamic and progressive way

to meet curriculum standards and competencies. Science Essentials are also available from Jossey-Bass publishers at the elementary school and middle school levels. You'll find the lessons and activities at each level actively engage students in learning about the natural and technological world in which we live by encouraging them to use their senses and intuitive abilities on the road to discovery. They were developed and tested by professional science teachers who sought to give students enjoyable learning experiences while preparing them for district and statewide proficiency exams. For easy use, the lesson and activities at the High School Level are printed on a big 8 1/2" x 11" lay-flat format that folds flat for photocopying of over 107 student activity sheets, and are organized into two sections: I. BIOLOGY (60 Lessons) Addresses the following topics: Fundamental Life Process, Single and Multicellular Organisms, Phenotypes, DNA/RNA, Genetics,

Ecosystems, Internal Environments, Bacteria, and Viruses. II. CHEMISTRY (47 Lessons) Includes information about: Periodic Table of Elements, Properties of Matter, and Kinetic Molecular Theory. Each section offers detailed lessons with reproducible activity sheets for teaching basic concepts and skills in one main area of science at this level. Each lesson includes: The Basic Principle underlying the lesson and accompanying student activity The specific science Competency students will demonstrate A list of Materials needed to complete the activity An easy-to-follow, illustrated Procedure for presenting the lesson and accompanying student activity handout Observations & Analysis describing the desired results and answers to the student activity A two-page, illustrated Student Handout with step-by-step directions for carrying out the activity and recording observations and conclusions The lessons in each section are followed by sample test items focusing on the

concepts and skills emphasized in that section. These will help students prepare for the types of questions they will be asked in actual test situations and are followed by answer keys. All three grade level volumes—elementary, middle school, and high school—give you stimulating and effective ways to help students master basic science content and prepare to demonstrate their knowledge at the particular level.

**Re/Structuring Science Education** - Wolff-Michael Roth 2009-12-24

Since its beginnings, science education has been under the influence of psychological theories of knowing and learning, while in more recent years, social constructivist and sociological frameworks have also begun to emerge. With little work being done on showing how the perspectives of these separate approaches might be integrated, this work aims to plug the gap. The book helps lay the groundwork for reuniting sociological and psychological perspectives on the knowing, learning, and teaching of science. Featuring a range of integrative efforts beginning with simple conversation, the chapters here include not only articles but

also commentaries that engage with other papers, as well as a useful running narrative that, from the introduction to the epilogue, contextualizes the book and its sections. Specific attention is given to cultural-historical activity theory, which already offers an integration of psychological and cultural-historical (sociological) perspectives on collectively motivated human activities. A number of chapters, as well as the contextualizing narrative, explicitly use this theory as a framework for rethinking science education to achieve the reunification that is the goal of this work. All the contributors to this volume have produced texts that contribute to the effort of overcoming the extant divide between sociological and psychological approaches to science education research and practice. From very different positions—gender, culture, race—they provide valuable insights to reuniting approaches in both theory and method in the field. As an ensemble, the contributions

constitute a rich menu of ideas from which new forms of science education can emerge.

Enhancement Exercises for Biology can augment any college-level biology course. The active learning modules featured in the Enhancement Exercises provide the best opportunity for students to learn and experience biology. The modules challenge students by providing activities ranging from simple, guided inquiry to more thoughtful, open-ended, research-based activities. Assign all or a portion of an individual exercise as applicable to your specific course. This book has been designed so the student can complete the assignments without any need for specialized lab equipment. The exercises can be completed by visiting local outdoor environments or by using common items easily obtained at home or the grocery store.

**Biology** - Sandra Alters 2000  
Designed for a one or two semester non-majors course in introductory biology taught at most two and four-year colleges. This course typically fulfills a general education requirement, and rather than

emphasizing mastery of technical topics, it focuses on the understanding of biological ideas and concepts, how they relate to real life, and appreciating the scientific methods and thought processes. Given the authors' work in and dedication to science education, this text's writing style, pedagogy, and integrated support package are all based on classroom-tested teaching strategies and learning theory. The result is a learning program that enhances the effectiveness & efficiency of the teaching and learning experience in the introductory biology course like no other before it.
