*A Lap of the Globe* - Kevin Clemens 2006-08-07

Now a legend among classic automobile aficionados, Phillip Young is the man generally given credit for starting the classic endurance rally concept. Beginning his career with the 1989 Pirelli Marathon Rally, by 1997 Young and the Classic Rally Association had created the Peking to Paris Motor Challenge. Echoing a 1907 competition, this road race was unprecedented in modern times with a route which included China, India and Tibet. With the approach of the millennium, however, Phillip Young took on an even more ambitious project--the Around the World in 80 Days Motor Challenge. Beginning and ending in London, this event would send its participants literally around the globe in pre-1960 automobiles. This memoir recounts the author's adventures while competing in the Around the World in 80 Days Motor Challenge from May to July 2000. Beginning with his search for a sponsor and his deliberations in choosing a 1959 Mercedes-Benz 220S, it follows him from his arrival in London through various countries including Italy, Greece, former Russian Republics, China, Canada, the United States, Morocco, Spain and France. Clemens provides an up-close view of places most westerners never get to see and of the rigors of competition over varying terrain in an old car. Appendices contain information such as the daily route and schedule, the rally results, and a list of the U.S. Mercedes Team sponsors.

**Honda Engine Swaps** - Aaron Bonk 2007-02-01

When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"--smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.
