MEDINFO 2019: Health and Wellbeing e-Networks for All - L. Ohno-Machado 2019-11-12
Combining and integrating cross-institutional data remains a challenge for both researchers and those involved in patient care. Patient-generated data can contribute precious information to healthcare professionals by enabling monitoring under normal life conditions and also helping patients play a more active role in their own care. This book presents the proceedings of MEDINFO 2019, the 17th World Congress on Medical and Health Informatics, held in Lyon, France, from 25 to 30 August 2019. The theme of this year's conference was 'Health and Wellbeing: E-Networks for All', stressing the increasing importance of networks in healthcare on the one hand, and the patient-centered perspective on the other. Over 1100 manuscripts were submitted to the conference and, after a thorough review process by at least three reviewers and assessment by a scientific program committee member, 285 papers and 296 posters were accepted, together with 47 podium abstracts, 7 demonstrations, 45 panels, 21 workshops and 9 tutorials. All accepted paper and poster contributions are included in these proceedings. The papers are grouped under four thematic tracks: interpreting health and biomedical data, supporting care delivery, enabling precision medicine and public health, and the human element in medical informatics. The posters are divided into the same four groups. The book presents an overview of state-of-the-art informatics projects from multiple regions of the world; it will be of interest to anyone working in the field of medical informatics.

Protecting the Health of the Poor - Abraar Karan 2015-12-15
Nowhere is the injustice of the global distribution of income and wealth more palpable than in health. While the world's affluent spend fortunes on the most trifling treatments, poor people's lives are ruined and often cut short prematurely by challenges that could easily be overcome at low cost: childbirth, diarrhoea, malnutrition, malaria, HIV/AIDS, measles, pneumonia. Millions are avoidably dying from such causes each year and billions of lives avoidably blighted by these diseases of poverty. Drawing on in-depth empirical research spanning Asia, Latin America, and Africa, this path-breaking collection offers fresh perspectives from critically engaged scholars. Protecting the Health of the Poor presents a call and a vision for unified efforts across geographies, levels and sectors to make the right to health truly universal.

How to Prepare a Research Proposal - David R. Krathwohl 1988
The public assumes the researcher spends the day dreaming up and trying out creative ideas. In reality, proposal development is an invisible but critical barrier over which even a good researcher may tumble. This book is intended to lower that barrier. It should increase first-trial recognition of good ideas and ensure that rejections do not result because a proposal poorly represented either the ideas, the investigator, or both.

Beyond the HIPAA Privacy Rule - Institute of Medicine 2009-03-24
In the realm of health care, privacy protections are needed to preserve patients' dignity and prevent possible harms. Ten years ago, to address these concerns as well as set guidelines for ethical health research, Congress called for a set of federal standards now known as the HIPAA Privacy Rule. In its 2009 report, Beyond the HIPAA Privacy Rule: Enhancing Privacy, Improving Health Through Research, the Institute of Medicine's Committee on Health Research and the Privacy of Health Information concludes that the HIPAA Privacy Rule does not protect privacy as well as it should, and that it impedes important health research.

Registries for Evaluating Patient Outcomes - Agency for Healthcare Research and Quality/AHRQ 2014-04-01
This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Health Research Governance in Africa - Cheluchi Onyemelukwe-Onuobia 2018-09-06
The globalisation of research has resulted in the increased location of research involving humans in developing countries. Countries in Africa, along with China and India, have seen research grow significantly. With emerging infectious diseases, such as Ebola and Zika, emphasising the risk of public health crises throughout the world, a further increase in health research, including clinical research in developing countries, which are often the sites of these diseases, becomes inevitable. This growth raises questions about domestic regulation and the governance of health research. This book presents a comprehensive and systemic view of the regulation of research involving humans in African countries. It employs case studies from four countries in which research activities continue to rise, and which have taken steps to regulate health research activity: South Africa, Nigeria, Kenya, and Egypt. The book examines the historical and political contexts of these governance efforts. It describes the research context, some of the research taking place, and the current challenges. It also looks at the governance mechanisms, ranging from domestic ethical guidelines to legal frameworks, the strengthening of existing regulatory agencies to the role of professional regulatory bodies. The book analyses the adequacy of current governance arrangements within African countries, and puts forward recommendations to improve the emerging governance systems for health research in African and other developing countries. It book will be a valuable resource for academics, researchers, practitioners and policy-makers working in the areas of health research, biomedical ethics, health law and regulation in developing countries.

Handbook of Research on Student-Centered Strategies in Online Adult Learning Environments - Fitzgerald, Carlton J. 2018-06-08
As traditional classroom settings are transitioning to online environments, teachers now face the challenge of using this medium to promote effective learning strategies, especially when teaching older age groups. Because adult learners bring a different set of understandings and skills to education than younger students, such as more job and life experiences, the one-size-fits-all approach to teaching does not work, thus pushing educators to create a student-centered approach for each learner. The Handbook of Research on Student-Centered Strategies in Online Adult Learning Environments is an important resource providing readers with multiple perspectives to approach issues often associated with adult learners in an online environment. This publication highlights current research on topics including, but not limited to, online competency-based education, nontraditional adult learners, virtual classrooms in public universities, and teacher training for online education. This book is a vital reference for online trainers, adult

educators, university administrators, researchers, and other academic professionals looking for emerging information on utilizing online classrooms and environments in student-centered adult education.

Utilizing this text with undergraduate, RN to BSN, and graduate nursing students, it is the ONLY text that demonstrates how to retrieve, read, and analyze evidence whether it is published as an individual study, systematic review, meta-analysis, best practice guideline, or outcomes management report. Students learn how to utilize multiple complex databases and websites as they move through each chapter. And, they experience dissemination of evidence through the development of presentations, publications, posters, and grants. This is truly a remarkable book that embraces evidence as the basis for nursing practice and patient-centered care and safety. Having used this text with more than 1000 students over the past five years, I can honestly say that I have found no other text that facilitates learning and development of clinical judgment that is grounded in valid, reliable, and applicable evidence. This is a keeper! Alice E.
