Physics - Michael J. Anzelone 2012-08-15

The *Fundamentals of Physics* is a compact text that includes basic topics of classical physics that a student should be familiar with in order to be truly educated in science. The text's clear and concise presentation will help a student understand the science of physics and round out his or her science foundation. The first chapter contains a historical perspective. This short history of science will firmly put the information in the text on a firm footing. A quick reading of the history will make the rest of the book easier to understand and increase the ability to remember material. Essential scientific ideas are presented in this text that fit together in such a way as to accept "new" information effortlessly and assimilate the "old" with the "new." The general plan of the text is to explain simple ideas and then incorporate them into more complex ideas. Explanatory annotations are included to ensure a student's ease of reading. General safety rules at the beginning of the text should be reviewed, even if a laboratory is not part of the course. The book includes topics that lend themselves to demonstration of basic principles of physics. Students should be encouraged to participate in demonstrations to acquire some "hands on" experience. This will allow students to grasp principles easier. The inclusion of a survey of the natural sciences will allow a student to be aware of the relationship of one science to another. An explanation of how the basic units of measurement were arrived at is

essential for a thorough understanding of mathematical concepts. Galileo's law of falling bodies, Isaac Newton's laws of motion and a short explanation of Einstein's concepts of relativity are simply presented. Atomic theory and the states of matter are clearly presented. The beginner should have no difficulty. The properties of sound and light are presented and related to everyday activities. Electricity, electronics and magnetism are included because of their relevance to the modern workplace. Understandable and practical examples are given. Radioactivity is covered because of its importance in the modern world.

Betraying Our Troops - Dina Rasor 2007-05-01

In this shocking exposé, two government fraud experts reveal how private contractors have put the lives of countless American soldiers on the line while damaging our strategic interests and our image abroad. From the shameful war profiteering of companies like Halliburton/KBR to the sinister influence that corporate lobbyists have on American foreign policy, Dina Rasor and Robert H. Bauman paint a disturbing picture. Here they give the inside story on troops forced to subsist on little food and contaminated water, on officers afraid to lodge complaints because of Halliburton's political clout, on millions of dollars in contractors' bogus claims that are funded by American taxpayers. Drawing on exclusive sources within government and the military, the authors show how money and power have conspired to undermine our fighting forces and threaten the security of our country.

Sales Closing For Dummies - Tom Hopkins
1998-04-30

Without the close, there is no sale. Pretty obvious, right? Yet, for many salespeople, closing is the most baffling and elusive part of the selling process. All too often, salespeople meet qualified clients and charm them with an eloquent presentation, only to see the sale mysteriously slip from between their fingers in the end. Which is sad when you consider all the hard work - the prospecting, preparation, planning, and practice - done for the sake of a moment of truth that never arrives. Fortunately, closing is an art that can be mastered, and now *Sales Closing For Dummies* shows you how. Packed with powerful principles that can help you become a top-producing salesperson, *Sales Closing For Dummies* is the ultimate guide to mastering that most mysterious part of the selling equation. Tom Hopkins, the legendary sales genius who, by age 30 was the nation's leading real-estate trainer, demystifies closing and shows what it takes to be a champion closer, including how to: Lead a sale without being pushy Read the signs of an interested potential buyer Use questioning methods that close sales, time and again Help clients feel good about their buying decisions Keep your clients' business and build their loyalty Build long-term relationships and watch your sales grow With the help of dozens of real-life examples from a wide cross section of industries, Tom shows why professional selling is about communication, not coercion. And he shares his considerable insight and experience on: Verbal and visual buying cues and how to recognize them Choosing the best location for closing Addressing concerns and creating a sense of urgency Time-tested tactics and strategies for ending customer procrastination, overcoming their fear, closing from a distance, and more The ten biggest closing mistakes and how to avoid them Add-on selling and other ways of getting your clients to help you to build your business Featuring Tom's Hopkins' trademark "Red Flag" key points and situation scripts, this fun, easy-to-understand guide arms you with the hands-on tools and techniques you'll need to become a world-class closer.

Feel-Bad Education - Alfie Kohn 2011-04-05

Mind-opening writing on what kids need from school, from one of education's most outspoken voices Almost no writer on schools asks us to question our fundamental assumptions about education and motivation as boldly as Alfie Kohn. The *Washington Post* says that "teachers and parents who encounter Kohn and his thoughts come away transfixed, ready to change their schools." And *Time* magazine has called him "perhaps the country's most outspoken critic of education's fixation on grades [and] test scores." Here is challenging and entertaining writing on where we should go in American education, in Alfie Kohn's unmistakable voice. He argues in the title essay with those who think that high standards mean joylessness in the classroom. He reflects thoughtfully on the question "Why Self-Discipline Is Overrated." And in an essay for the *New York Times*, which generated enormous response, he warns against the dangers of both punishing and praising children for what they do instead of parenting "unconditionally." Whether he's talking about school policy or the psychology of motivation, Kohn gives us wonderfully provocative—and utterly serious—food for thought. This new book will be greeted with enthusiasm by his many readers, and by teachers and parents seeking a refreshing perspective on today's debates about kids and schools.
