[The River Cafe Classic Italian Cookbook](#) - Rose Gray 2018-02-22

Thirty years after its doors first opened, The River Café remains one of London's most iconic restaurants, loved for its innovative Italian food. Pioneering chefs Rose Gray and Ruth Rogers together changed the face of Italian food in Britain, championing seasonality well ahead of their time from their West London kitchen, which won a Michelin star in 1998 and has kept it ever since. The restaurant helped launch the careers of Jamie Oliver and Hugh Fearnley-Whittingstall, to name but two. Over the course of decades, Rose and Ruth visited Italy time and again, fascinated by the subtleties of dishes from the many different, and diverse, regions of the country. Their unique approach to Italian farmhouse cooking was learned from local mothers, grandmothers, cousins and wine makers who invited them into their kitchens and shared wisdom and precious family recipes. This book gathers together Rose and Ruth's personal interpretations of those heirloom recipes. It's a celebration of the real, classic food of Italy; the traditional, regional food they ate on their travels; and the food they went on to cook at the restaurant and at home. These are the recipes they became well known for, as well as some that

are cooked less and less in Italy these days and which Rose and Ruth longed to preserve and pass on.

Geography and Revolution - David N. Livingstone 2010-08-15

A term with myriad associations, revolution is commonly understood in its intellectual, historical, and sociopolitical contexts. Until now, almost no attention has been paid to revolution and questions of geography. Geography and Revolution examines the ways that place and space matter in a variety of revolutionary situations. David N. Livingstone and Charles W. J. Withers assemble a set of essays that are themselves revolutionary in uncovering not only the geography of revolutions but the role of geography in revolutions. Here, scientific revolutions—Copernican, Newtonian, and Darwinian—ordinarily thought

of as placeless, are revealed to be rooted in specific sites and spaces. Technical revolutions—the advent of print, time-keeping, and photography—emerge as inventions that transformed the world's order without homogenizing it. Political revolutions—in France, England, Germany, and the United States—are notable for their debates on the nature of political institutions and national identity. Gathering insight from geographers, historians, and historians of science, *Geography and Revolution* is an invitation to take the where as seriously as the who and the when in examining the nature, shape, and location of revolutions. *Gray Hat Hacking: The Ethical Hacker's Handbook, Fifth Edition* - Daniel Regalado 2018-04-05

Cutting-edge techniques for finding and fixing critical security flaws Fortify your network and avert digital catastrophe with proven strategies from a team of security experts. Completely updated and featuring 13 new chapters, *Gray Hat Hacking, The Ethical Hacker's Handbook, Fifth Edition* explains the enemy's current weapons, skills, and tactics and offers field-tested remedies, case studies, and ready-to-try testing labs. Find out how hackers gain access, overtake network devices, script and inject malicious code, and plunder Web applications and browsers. Android-based exploits, reverse engineering techniques, and cyber law are thoroughly covered in this state-of-the-art resource. And the new topic of exploiting the Internet of things is introduced in this edition.

- Build and launch spoofing exploits with Ettercap
- Induce error conditions and crash software using fuzzers
- Use advanced reverse engineering to exploit Windows and Linux software
- Bypass Windows Access Control and memory protection schemes
- Exploit web applications with Padding Oracle Attacks
- Learn the use-after-free technique used in recent zero days
- Hijack web browsers with advanced XSS attacks

A single seed is more than just the promise of a plant. In rural south India, seeds represent diverging paths toward a sustainable livelihood. Development programs and global agribusiness promote genetically modified seeds and organic certification as a path toward more sustainable cotton production, but these solutions mask a complex web of economic, social, political, and ecological issues that may have consequences as dire as death. In *Cultivating Knowledge* anthropologist Andrew Flachs shows how rural farmers come to plant genetically modified or certified organic cotton, sometimes during moments of agrarian crisis. Interweaving ethnographic detail, discussions of ecological knowledge, and deep history, Flachs uncovers the unintended consequences of new technologies, which offer great benefits to some—but at others' expense. Flachs shows that farmers do not make simple cost-benefit analyses when evaluating new technologies and options. Their evaluation of development is a complex and shifting calculation of social meaning, performance, economics, and personal aspiration. Only by understanding this complicated nexus can we begin to understand sustainable agriculture. By comparing the experiences of farmers engaged with these mutually exclusive visions for the future of agriculture, *Cultivating Knowledge* investigates the human responses to global agrarian change. It illuminates the local impact of global changes: the slow, persistent dangers of pesticides, inequalities in rural life, the aspirations of people who grow fibers sent around the world, the place of ecological knowledge in modern agriculture, and even the complex threat of suicide. It all begins with a seed.

The Management of Industrial Forest Plantations - José G. Borges 2014-09-01

The Management of Industrial Forest Plantations. Theoretical Foundations and Applications provides a synthesis of current knowledge about industrial forestry management planning processes. It covers components of the forest supply chain ranging from modelling techniques to management planning approaches and information and

communication technology support. It may provide effective support to education, research and outreach activities that focus on forest industrial plantations management. It may contribute further to support forest managers when developing industrial plantations management plans. The book includes the discussion of applications in 26 Management Planning in Actions boxes. These applications highlight the linkage between theory and practice and the contribution of models, methods and management planning approaches to the efficiency and the effectiveness of industrial plantations management planning.

Corporate Crops - Gabriela Pechlaner 2012-12-01

Biotechnology crop production area increased from 1.7 million hectares to 148 million hectares worldwide between 1996 to 2010. While genetically modified food is a contentious issue, the debates are usually limited to health and environmental concerns, ignoring the broader questions of social control that arise when food production methods become corporate-owned intellectual property. Drawing on legal documents and dozens of interviews with farmers and other stakeholders, *Corporate Crops* covers four case studies based around litigation between biotechnology corporations and farmers. Pechlaner investigates the extent to which the proprietary aspects of biotechnologies—from patents on seeds to a plethora of new rules and contractual obligations associated with the technologies—are reorganizing crop production. The lawsuits include patent infringement litigation launched by Monsanto against a Saskatchewan canola farmer who, in turn, claimed his crops had been involuntarily contaminated by the company's GM technology; a class action application by two Saskatchewan organic canola farmers launched against Monsanto and Aventis (later Bayer) for the loss of their organic market due to contamination with GMOs; and two cases in Mississippi in which Monsanto sued farmers for saving seeds containing its patented GM technology. Pechlaner argues that well-funded corporate lawyers have a decided advantage over independent farmers in the courts and in creating new forms of power and control in agricultural production. *Corporate Crops* demonstrates the effects of this intersection between

the courts and the fields where profits, not just a food supply, are reaped.

The Pruning of Trees, Shrubs and Conifers - George E. Brown 2009-09-16

How, when, and where to prune? The questions that beset every gardener never change, but the solutions do. *The Pruning of Trees, Shrubs and Conifers* recommends the best pruning techniques and practices. This unique encyclopedic treatment details the best pruning methods for more than 450 genera of trees, shrubs, conifers, and woody climbers. The A-Z format covers several thousand species, yet remains a manageable and practical reference. Kirkham clearly explains the reasons behind pruning techniques as well as how to apply them.

Ancestral Encounters in Highland Madagascar - Zoë Crossland 2014-02-17

This book examines encounters between the living and the dead in nineteenth-century highland Madagascar, considering the challenges that ghostly actors pose for writing history.

Earth Observation Open Science and Innovation - Pierre-Philippe Mathieu 2018-01-23

This book is published open access under a CC BY 4.0 license. Over the past decades, rapid developments in digital and sensing technologies, such as the Cloud, Web and Internet of Things, have dramatically changed the way we live and work. The digital transformation is revolutionizing our ability to monitor our planet and transforming the way we access, process and exploit Earth Observation data from satellites. This book reviews these megatrends and their implications for the Earth Observation community as well as the wider data economy. It provides insight into new paradigms of Open Science and Innovation applied to space data, which are characterized by openness, access to large volume of complex data, wide availability of new community tools, new techniques for big data analytics such as Artificial Intelligence, unprecedented level of computing power, and new types of collaboration among researchers, innovators, entrepreneurs and citizen scientists. In addition, this book aims to provide readers with some reflections on the

future of Earth Observation, highlighting through a series of use cases not just the new opportunities created by the New Space revolution, but also the new challenges that must be addressed in order to make the most of the large volume of complex and diverse data delivered by the new generation of satellites.

Japan Traveler's Atlas - Tuttle Publishing, 2019-10-01

Finding your way around the various regions of Japan is a breeze with this handy Tuttle Japan Traveler's Atlas. Designed for the adventurous

traveler and containing all the maps you'll need on your explorations, this atlas includes many views that are not available anywhere else. The atlas is conveniently divided into the major regions of Japan: Tokyo Mt. Fuji & Around Tokyo Central Honshu Kyoto Kansai Hiroshima & Western Honshu Northern Honshu Hokkaido Shikoku Kyushu Okinawa & the Southwest Islands Each of the 148 maps in this atlas is presented in a logical, easy-to-follow manner, with emphasis on the most frequently-visited areas. All cities, towns, villages, places of interest including nature reserves are indexed for quick reference. Comprehensive: detailed insets are given for all the major cities, travel destinations and business hubs in Japan. Informative: Precise locations are indicated for all popular sights, hotels, restaurants, temples, shopping malls and other essential locations. Practical: The handy size, well-designed key maps and comprehensive index help you find any place you are looking for quickly. Reliable: No need to worry about cell service or battery—the maps in this atlas are thoroughly researched and regularly updated by the leading publisher of Asia Pacific maps.

Frontier Making in the Amazon - Antonio Augusto Rossotto Ioris

2020-01-21

This book discusses the outcomes of more than ten years of research in the southern tracts of the Amazon region, and addresses the expansion of the agricultural frontier, consolidation of the agribusiness-based economy, and expansion of regional infrastructure (roads, dams, urban centres, etc). It combines extensive empirical evidence with the international literature on frontier-making and regional Amazonian development, and adopts a critical politico-geographical perspective that will benefit scholars in various other disciplines. This book is intended to push the current theoretical and methodological boundaries regarding the controversies and impacts of agribusiness in the region. A new international scientific network, led by the author, is investigating the broader context of the themes analysed here.

Global Forest Monitoring from Earth Observation - Frederic Achard

2016-04-19

Covering recent developments in satellite observation data undertaken for monitoring forest areas from global to national levels, this book highlights operational tools and systems for monitoring forest ecosystems. It also tackles the technical issues surrounding the ability to produce accurate and consistent estimates of forest area changes, which are needed to report greenhouse gas emissions and removals from land use changes. Written by leading global experts in the field, this book offers a launch point for future advances in satellite-based monitoring of global forest resources. It gives readers a deeper understanding of monitoring methods and shows how state-of-art technologies may soon provide key data for creating more balanced policies.

Big Farms Make Big Flu - Rob Wallace 2016-06-30

The first collection to explore infectious disease, agriculture, economics, and the nature of science together Thanks to breakthroughs in production and food science, agribusiness has been able to devise new ways to grow more food and get it more places more quickly. There is no shortage of news items on hundreds of thousands of hybrid poultry—each animal genetically identical to the next—packed together in megabarns, grown out in a matter of months, then slaughtered, processed and shipped to the other side of the globe. Less well known are the deadly pathogens mutating in, and emerging out of, these specialized agro-environments. In fact, many of the most dangerous new diseases in humans can be traced back to such food systems, among them *Campylobacter*, Nipah virus, Q fever, hepatitis E, and a variety of novel influenza variants. Agribusiness has known for decades that packing thousands of birds or livestock together results in a monoculture that selects for such disease. But market economics doesn't punish the companies for growing Big Flu—it punishes animals, the environment, consumers, and contract farmers. Alongside growing profits, diseases are permitted to emerge, evolve, and spread with little check. “That is,” writes evolutionary biologist Rob Wallace, “it pays to produce a pathogen

that could kill a billion people.” In *Big Farms Make Big Flu*, a collection of dispatches by turns harrowing and thought-provoking, Wallace tracks the ways influenza and other pathogens emerge from an agriculture controlled by multinational corporations. Wallace details, with a precise and radical wit, the latest in the science of agricultural epidemiology, while at the same time juxtaposing ghastly phenomena such as attempts at producing featherless chickens, microbial time travel, and neoliberal Ebola. Wallace also offers sensible alternatives to lethal agribusiness. Some, such as farming cooperatives, integrated pathogen management, and mixed crop-livestock systems, are already in practice off the agribusiness grid. While many books cover facets of food or outbreaks, Wallace's collection appears the first to explore infectious disease, agriculture, economics and the nature of science together. *Big Farms Make Big Flu* integrates the political economies of disease and science to derive a new understanding of the evolution of infections. Highly capitalized agriculture may be farming pathogens as much as chickens or corn.

Seed Activism - Karine E. Peschard 2022-10-04

How lawsuits around intellectual property in Brazil and India are impacting the patentability of plants and seeds, farmers' rights, and the public interest. Over the past decade, legal challenges have arisen in the Global South over patents on genetically modified crops. In this ethnographic study, Karine E. Peschard explores the effects of these disputes on people's lives, while uncovering the role of power—material, institutional, and discursive—in shaping laws and legal systems. The expansion of corporate intellectual property (IP), she shows, negatively impacts farmers' rights and, by extension, the right to food, since small farms produce the bulk of food for domestic consumption. Peschard sees emerging a new legal common sense concerning the patentability of plant-related inventions, as well as a balance among IP, farmers' rights, and the public interest. Peschard examines the strengthening of IP regimes for plant varieties, the consolidation of the global biotech industry, the erosion of agrobiodiversity, and farmers' dispossession. She shows how litigants question the legality of patents and private IP

systems implemented by Monsanto for royalties on three genetically modified crop varieties, Roundup Ready soybean in Brazil and Bt cotton and Bt eggplant in India. Peschard argues that these private IP systems have rendered moot domestic legislation on plant variety protection and farmers' rights. This unprecedented level of corporate concentration in such a vital sector raises concerns over the erosion of agricultural biodiversity, farmers' rights and livelihoods, food security, and, ultimately, the merits of extending IP rights to higher life forms such as plants.

The Political Ecology of the State - Antonio Augusto Rossotto Ioris
2014-03-26

The contemporary state is not only the main force behind environmental change, but the reactions to environmental problems have played a crucial role in the modernisation of the state apparatus, especially because of its mediatory role. The Political Ecology of the State is the first book to critically assess the philosophical basis of environmental statehood and regulation, addressing the emergence and evolution of environmental regulation from the early twentieth century to the more recent phase of ecological modernisation and the neoliberalisation of nature. The state is understood as the result of permanent socio-natural interactions and multiple forms of contestation, from a critical politico-ecological approach. This book examines the tension between pro- and anti-commons tendencies that have permeated the organisation and failures of the environmental responses put forward by the state. It provides a reinterpretation of the achievements and failures of mainstream environmental policies and regulation, and offers a review of the main philosophical influences behind different periods of environmental statehood and regulation. It sets out an agenda for going beyond conventional state regulation and grassroots dealings with the state, and as such redefines the environmental apparatus of the state.

The Ethics and Economics of Agrifood Competition - Harvey S. James, Jr.
2013-03-19

This edited volume presents ethical and economic analyses of agrifood competition. By systematically examining fairness and openness in

agricultural markets, it seeks to answer the question of whether there is adequate competition in the agrifood industry and whether the system is fair to all participants. It outlines ethical and economic principles important for understanding agrifood competition, presents arguments for and against consolidation, globalization and the integration of agrifood industries, and looks at the implications of globalization on the nature of competition in specific agricultural contexts.

Monsanto and Intellectual Property in South America - F. Filomeno
2014-02-12

Intellectual property is one of the most valuable forms of property in the modern world. From the perspective of companies producing knowledge-intensive goods, it encourages technological innovations for the benefit of humanity. For consumers of technology, it can be seen as a restriction on access to knowledge that inflates corporate rents. When genetic material crucial for human life is isolated from the commons, engineered and turned into private intellectual property, dissent is likely to emerge. Felipe Filomeno uses the case of Monsanto in South American soybean agriculture to theorize about the emergence and change of intellectual property regimes. Based on official documents, interviews, journalistic material, and academic literature, the study shows not only the relations of competition, coercion, and alliances that lie behind the post-1980 global upward ratchet of intellectual property protection but also the strategies that have the potential to reverse it.

Politics of Intellectual Property - European Consortium for Political Research. Joint Sessions of Workshops 2009

We know much more about the global politics of intellectual property than we do about national political contests over the ownership of knowledge. Haunss and Shadlen have identified this gap in the literature and have done a fine job of bringing together a set of essays that helps to

fill this gap in our understanding of the multi-layered nature of intellectual property politics. Peter Drahos, The Australian National University, Canberra This thought-provoking volume provides invaluable new insights and is a major contribution to the debate on the politics of intellectual property rights. Duncan Matthews, Queen Mary, University of London, UK This book offers empirical analyses of conflicts over the ownership, control, and use of knowledge and information in developed and developing countries. Sebastian Haunss and Kenneth C. Shadlen, along with a collection of eminent contributors, focus on how business organizations, farmers, social movements, legal communities, state officials, transnational enterprises, and international organizations shape IP policies in areas such as health, information-communication technologies, indigenous knowledge, genetic resources, and many others. The innovative and original chapters examine conflicts over the rules governing various dimensions of IP, including patents, copyrights, traditional knowledge, and biosafety regulations. Written from a political perspective, this book is a must-read for political scientists, sociologists and anthropologists who study IP and conflicts over property. It is also an essential read for stakeholders in institutions, NGOs and industry interested in knowledge governance and IP politics.

Private Power, Public Law - Susan K Sell 2003

Analysis of the power of multinational corporations in moulding international law on intellectual property rights.

The Political Economy of Agricultural Booms - Mariano Turzi 2016-11-15

This book offers an in-depth analysis of the political economy of soybean production in Brazil, Argentina and Paraguay, by identifying the dominant private and public actors and control mechanisms that have given rise to a corporate-driven, vertically integrated system of regionalized agricultural production in the Southern Cone of South America. The current agricultural boom surrounding soybean production has been aided by aggressive new agro-technologies, including biotechnology, leading to massive organizational changes in the agricultural sector and a significant rise in the power of special interest groups and corporations. Despite having similar initial production

conditions, the pattern of economic activity surrounding soybean production in Brazil, Argentina and Paraguay, continues to be largely determined by the needs of the multinational corporations involved, rather than national considerations of comparative advantage. The author uses these findings to argue that the new international model of agricultural production empowers chemical and trading multinational companies over national governments.

Food Waste to Animal Feed - Michael L. Westendorf 2007-11-19

The magnitude of the food-waste disposal problem cannot be understated. Utilisation of food waste is of concern to the food processing industry, consumers, environmentalists, and regulators of handling and disposal systems. Food waste is not consistent in quality, is usually high in moisture content, and is only available locally. This book focuses on the challenges of utilising both wet and/or processed food waste. The regulatory environment relating to food waste, the perspective of the end-users, and practical use as animal feed is also discussed. One of the goals of this publication, other than to give a clear explanation of the subject of food waste and its uses as animal feed, is to stimulate a need for research.

Cotton in Colombia - Horace G. Porter 1971

Agribusiness and the Neoliberal Food System in Brazil - Antonio Augusto Rossotto Ioris 2017-08-07

Due to new production areas and persistent productivity gains, Brazil has consolidated its position as a global leader and even as a 'model' of commercial, integrated crop production. The country is now seen as an agricultural powerhouse that has a lot to offer in terms of reducing the prospect of a looming, increasingly global, food crisis. Agribusiness and the Neoliberal Food System in Brazil focuses on the intensification of Brazilian agribusiness as a privileged entry point into the politicised

geography of globalised agri-food. Drawing on rich empirical analysis based around three fieldwork campaigns in the state of Mato Grosso, the book examines the connections between farming, markets and the apparatus of the state. The importance of agribusiness expansion within the wider politico-economic context of Brazilian neoliberalism is demonstrated, thus drawing broader conclusions about the main trends of agribusiness in the world today and providing recommendations for future research. This book will be of great interest to students and scholars of agribusiness, neoliberalism and global food production, as well as those interested in Brazil and Latin America more generally.

Principles for Building Resilience - ReINETTE Biggs 2015-04-02

Reflecting the very latest research, this book provides an in-depth review of the role of resilience in the management of social-ecological systems and the ecosystem services they provide. Leaders in the field outline seven principles for building resilience in social-ecological systems, examining how these can be applied to advance sustainability.

Essentials of Classic Italian Cooking - Marcella Hazan 2011-07-20

A beautiful new edition of one of the most beloved cookbooks of all time, from “the Queen of Italian Cooking” (Chicago Tribune). A timeless collection of classic Italian recipes—from Basil Bruschetta to the only tomato sauce you’ll ever need (the secret ingredient: butter)—beautifully illustrated and featuring new forewords by Lidia Bastianich and Victor Hazan “If this were the only cookbook you owned, neither you nor those you cooked for would ever get bored.” —Nigella Lawson Marcella Hazan introduced Americans to a whole new world of Italian food. In this, her magnum opus, she gives us a manual for cooks of every level of expertise—from beginners to accomplished professionals. In these pages, home cooks will discover:

- Minestrone alla Romagnola
- Tortelli Stuffed with Parsley and Ricotta
- Risotto with Clams
- Squid and Potatoes, Genoa Style
- Chicken Cacciatora
- Ossobuco in Bianco
- Meatballs and Tomatoes
- Artichoke Torta
- Crisp-Fried Zucchini blossoms
- Sunchoke and Spinach Salad
- Chestnuts Boiled in Red Wine, Romagna Style
- Polenta Shortcake with Raisins, Dried Figs, and Pine Nuts
- Zabaglione

And much more This is the go-to Italian cookbook for students,

newlyweds, and master chefs, alike. Beautifully illustrated with line drawings throughout, *Essentials of Classic Italian Cooking* brings together nearly five hundred of the most delicious recipes from the Italian repertoire in one indispensable volume. As the generations of readers who have turned to it over the years know (and as their spattered and worn copies can attest), there is no more passionate and inspiring guide to the cuisine of Italy.

Resisting Intellectual Property - Debora J. Halbert 2006-02-01

Over the past decade, the scope of copyright and patent law has grown significantly, strengthening property rights, even when such rights seem to infringe upon other, more basic, priorities. This book investigates the ways in which activists, scholars, and communities are resisting the expansion of copyright and patent law in the information age. Debora J. Halbert explores how an alternative framework for understanding intellectual property - including about how we ought to think about the issues, the development of social movements around specific issues, and civil disobedience - has developed. Each chapter in the book discusses how resistance is developing in relation to a particular copyright or patent issue such as: access to patented medication access to copyrighted information and music via the Internet the patenting of genetic material. This controversial book examines the ways in which the idea of intellectual property is being re-thought by the victims of an over-expansive legal system. It will appeal to students and researchers from a range of disciplines, from law and political science to computer science, with an interest in intellectual property.

Agriculture and Food in Crisis - Fred Magdoff 2010-11-01

The failures of “free-market” capitalism are perhaps nowhere more evident than in the production and distribution of food. Although modern

human societies have attained unprecedented levels of wealth, a significant amount of the world's population continues to suffer from hunger or food insecurity on a daily basis. In *Agriculture and Food in Crisis*, Fred Magdoff and Brian Tokar have assembled an exceptional collection of scholars from around the world to explore this frightening long-term trend in food production. While approaching the issue from many angles, the contributors to this volume share a focus on investigating how agricultural production is shaped by a system that is oriented around the creation of profit above all else, with food as nothing but an afterthought. As the authors make clear, it is technically possible to feed the world's people, but it is not possible to do so as long as capitalism exists. Toward that end, they examine what can be, and is being, done to create a human-centered and ecologically sound system of food production, from sustainable agriculture and organic farming on a

large scale to movements for radical land reform and national food sovereignty. This book will serve as an indispensable guide to the years ahead, in which world politics will no doubt come to be increasingly understood as food politics.
