Human Error in Aviation - R.Key Dismukes 2017-07-05

Most aviation accidents are attributed to human error, pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective: The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

**Health Literacy** - Institute of Medicine 2013-08-10

The roots of health literacy can be traced back to the national literacy movement in India under Gandhi and to aid groups working in Africa to promote education and health. The term health literacy was first used in 1974 and described as "health education meeting minimal standards for all school grade levels". From that first use the definition of health literacy evolved during the next 30 years with official definitions promulgated by government agencies and large programs. Despite differences among these definitions, they all hold in common the idea that health literacy involves the need for people to understand information that helps them maintain good health. Although the United States produces a majority of the research on health literacy, Europe has strong multinational programs as well as research efforts, and health literacy experts in developing countries have created successful programs implemented on a community level. Given these distinct strengths of efforts worldwide, there are many opportunities for collaboration. International collaboration can harness the United States'

research power, Europe's multilingual and multinational experience, and developing nations' community-based programs to create robust programs and research that reach people not based on language or nationality but on need and value. A workshop on international health literacy efforts that feature presentations and discussion about health literacy interventions from various countries as well as other topics related to international health literacy was held as the basis for this report. Health Literacy: Improving Health, Health Systems, and Health Policy Around the World summarizes the findings and discussions at the workshop.

*Not an Idea We Have to Shun* - Institute for National Strategic Studies 2014-12-14

China's expanding international economic interests are likely to generate increasing demands for its navy, the People's Liberation Army Navy (PLAN), to operate out of area to protect Chinese citizens, investments, and sea lines of communication. The frequency, intensity, type, and location of such operations will determine the associated logistics support requirements, with distance from China, size and duration, and combat intensity being

especially important drivers. How will the PLAN employ overseas bases and facilities to support these expanding operational requirements? The assessment in this book is based on Chinese writings, comments by Chinese military officers and analysts, observations of PLAN operational patterns, analysis of the overseas military logistics models other countries have employed, and interviews with military logisticians. China's rapidly expanding international interests are likely to produce a parallel expansion of PLAN operations, which would make the current PLAN tactic, exclusive reliance on commercial port access, untenable due to cost and capacity factors. This would certainly be true if China contemplated engaging in higher intensity combat operations. This book considers six logistics models that might support expanded PLAN overseas operations: the Pit Stop Model, Lean Colonial Model, Dual Use Logistics Facility, String of Pearls Model, Warehouse Model, and Model USA. Each model is analyzed in terms of its ability to support likely future naval missions to advance China's expanding overseas economic, political, and security interests and in light of longstanding Chinese foreign policy principles. This analysis concludes that the Dual Use Logistics Facility and String of Pearls models most closely align with China's foreign policy principles and expanding global interests. To assess which alternative China is likely to pursue, the book reviews current PLAN operational patterns in its Gulf of Aden counterpiracy operations to assess whether the PLAN is currently pursuing one model over the other and to provide clues about Chinese motives and potential future trajectories. To ensure that this study does not suffer from faulty assumptions, it also explicitly examines the strategic logic that Western analysts associate with the String of Pearls Model in light of the naval forces and logistics infrastructure that would be necessary to support PLAN major combat operations in the Indian Ocean. Both the contrasting inductive and deductive analytic approaches support the conclusion that China appears to be planning for a relatively modest set of missions to support its overseas interests, not building a covert logistics infrastructure to fight the United States or India in the Indian Ocean.

**China's Evolving Space Capabilities** - Mark a Stokes 2012-04-27

The People's Republic of China (PRC) has made significant advances in its space program and is emerging as a space power. With preservation of its monopoly on power as an overriding goal, the Chinese Communist Party (CCP) bolsters its legitimacy through achievements in space. The Chinese military manages China's space program and there is significant overlap between civilian and military space operations, which mutually reinforce one another. An increasingly sophisticated R&D and industrial establishment supplies the People's Liberation Army (PLA) with military space systems. The PLA General Armaments Department (GAD) appears to oversee space systems acquisitions

and operations. Other important organizations in the space program include the China Aerospace Science and Technology Corporation (CASC) and China Aerospace Science and Industry Corporation (CASIC). As a rough NASA counterpart, the China National Space Administration (CNSA) facilitates international exchanges and cooperative programs with other space-faring nations.
