The Unthinkable - Amanda Ripley 2009-06-16
Discover how human beings react to danger–and what makes the difference between life and death Today, nine out of ten Americans live in places at significant risk of earthquakes, hurricanes, tornadoes, terrorism, or other disasters. Tomorrow, some of us will have to make split-second choices to save ourselves and our families. How will we react? What will it feel like? Will we be heroes or victims? In her quest to answer these questions, award-winning journalist Amanda Ripley traces human responses to some of recent history's epic disasters, from the explosion of the Mont Blanc munitions ship in 1917–one of the biggest explosions before the invention of the atomic bomb–to the journeys of the 15,000 people who found their way out of the World Trade Center on September 11, 2001. To understand the science behind the stories, Ripley turns to leading brain scientists, trauma psychologists, and other disaster experts. She even has her own brain examined by military researchers and experiences, through realistic simulations, what it might be like to survive a plane crash into the ocean or to escape a raging fire. Ripley comes back with precious wisdom about the surprising humanity of crowds, the elegance of the brain's fear circuits, and the stunning inadequacy of many of our evolutionary responses. Most unexpectedly, she discovers the brain's ability to do much, much better–with just a little help.

Crisis Management in the Food and Drinks Industry: A Practical Approach - Colin Doeg 2006-06-18
Few titles could be timelier than the second edition of Crisis Management in the Food and Drinks Industry – A Practical Approach. The world is worrying about a human pandemic arising from the avian flu epidemic that is spreading from the Far East, the implications of which could be as great for the food industry as were the outbreaks of foot and mouth disease and BSE. This practical and greatly expanded edition by media and public relations veteran Colin Doeg focuses on the communications aspects of dealing with a crisis. It is global in its coverage of the subject, reviewing practices and requirements in countries ranging from the USA and the UK to Australia and New Zealand. Doeg offers advice ranging from preparing for the unthinkable to the dramatic expansion of the Internet, avoiding being caught off-guard by a situation, the ramifications of product tampering and managing an actual crisis. Advice is also offered on dealing with extremist organizations and terrorist threats as well as bioterrorism – "a clear and present danger" – and a number of problems facing the food industry, including the practice of selling meat unfit for human

consumption and the threat posed by the increasing toxicity of fish due to the rising pollution of the world's oceans. In a special late chapter – written only three months before publication – the author looks ahead to events which he believes will shape the world of crisis management in the future, including the empowering influence of the Internet during the 2004 Asian Tsunami, the discovery of the illegal dye Sudan 1 (Red) in millions of food products and the fears of a pandemic arising from the spreading outbreak of avian flu. Examples of typical documents like a crisis plan for a business, a crisis checklist, a press release announcing a product recall, an announcement to employees and a checklist for anyone dealing with a threatening phone call are provided. Also included is a list of sources of information and assistance in the event of a product crisis. Crisis Management in the Food and Drinks Industry is the only title dealing specifically with this crucial subject in relation to the food industry. As such, it is relevant not only to those in the food industry, but also to marketing and senior management in general in the fields of agriculture, public health and law enforcement.

Managing the Unthinkable - Gretchen M. Bataille 2014-04-17
Crises are no strangers on campuses—whether the deaths of students, severe weather events, athletic wrongdoing, crime, or student or employee malfeasance. How leaders respond can save lives, strengthen the institution, and comfort the community—or compromise reputations and result in scandal. Risk management and readiness are not often at the top of the list of what presidents and their boards must do, but in a time of ongoing change, instantaneous communication, and media scrutiny, they risk their jobs and their institutional reputation if they do not heed the messages conveyed in this book. Gretchen Bataille and Diana Cordova, with extensive and varied experiences that include a university presidency, directing senior leadership programs, and counseling presidents and senior administrators faced with critical campus events – together with 22 presidents, seasoned leaders in higher education, and media experts – provide forthright, firsthand advice on preparing for and managing a crisis, as well on handling the emotional, and often long-term, toll that can result from dramatic events on campus. Through the examples of those who have successfully managed crises, this book provides expert insights and guidance on preparedness, assigning roles and responsibilities, and planning for contingencies ahead of time so that, in the moment, when there is pressure for immediate response that will be scrutinized by the media, by the public, and by the local constituencies, leaders can act with confidence. The contributors emphasize the crucial importance of ethical behavior, the need for clear protocols for how all employees should handle problematic issues, and the need for mechanisms that allow employees and students to report problems without fear of retribution. Creating an atmosphere of transparency, accountability, and ethical behavior isn't something a leader does when a scandal strikes to protect a reputation; it's what leaders must do to reinforce their good name every day. For senior leaders and board members not in the throes of managing a crisis, this book outlines what needs to be done to be prepared and offers extensive resources for further reading.

Crisis Management in the Food and Drinks Industry - Colin Doeg 1995

The second edition sets out the general principles of dealing with a serious problem that has attracted media attention or is likely to do so. It takes a global look at current developments which have changed the face of crisis management forever, including the internet and email, the impact of satellite and cable television, the implications of rolling 24-hour news coverage, and the growth of new forms of communications. The second edition also examines the activities of extremist organisations as well as product tampering and extortion. The Civil Contingencies Act 2004 - Clive Walker 2006
Recent disturbing events, namely: the fuel strikes of 2000; the catastrophic terrorist attacks of 2001; the threat of further attack through chemical and biological weapons; the foot and mouth outbreak of 2001; and climate change with its associated risks of floods and drought; have rendered a more comprehensive approach to risk and resilience within the United Kingdom essential. This book provides a detailed exploration of the Civil Contingencies Act 2004 and its supporting documentation. It describes and analyses recent changes by providing a full commentary on all parts of the Act. Part I covers the planning aspects and Part II explores the more reactive and controversial regulations.

Beyond Redundancy - Eric Bauer 2011-09-26

Georedundancy and Service Availability provides both a theoretical and practical treatment of the feasible and likely benefits of geographic redundancy for both service availability and service

reliability. The text provides network/system planners, IS/IT operations folks, system architects, system engineers, developers, testers, and other industry practitioners with a general discussion about the capital expense/operating expense tradeoff that frames system redundancy and georedundancy.

Effective Communication During Disasters - Girish Bobby Kapur 2016-12-08
This title includes a number of Open Access chapters. In today's world, there are new opportunities for disaster communications through modern technology and social media. Social network applications such as Facebook, Twitter, and Instagram can connect friends, family, first responders, and those providing relief and assistance. However, social media and other modern communication tools have their limitations. They can be affected by disaster situations where there are power outages or interrupted cellular service. The research contained in this valuable compendium offers much-needed information for emergency responders, utility companies, relief organizations, and governments as they invest in infrastructure to support post-disaster communications. In order to make use of modern communication methods, as well as fully utilize more traditional communication networks, it is imperative that we understand how people actually communicate in the wake of a disaster situation and how various communication strategies can best be utilized. Communication during and immediately after a disaster situation is a vital component of response and recovery. Effective communication connects first responders, support systems, and family members with the communities and individuals immersed in the disaster. Reliable communication also plays a key role in a community's resilience. With research from internationally recognized experts, this volume provides an overview of communication challenges and best-practice analyses, looks at the internet and social media and mobile phones and other technology for disaster communication, and explores the challenges to effective communication. Presents a quality improvement project that gathered expert consensus on best practices used to improve disaster communication Analyzes the information dissemination mechanisms of different media to establish an efficient information dissemination plan for disaster pre-warning, including short message service (SMS), microblogs, news portals, cell phones, television, and oral communication Gauges the effectiveness of disaster risk communication Looks at the future of social media use during emergencies and afterwards Proposes a disaster resilient network that integrates various wireless networks into a cognitive wireless network in the event of disaster occurrences Effective Communication During Disasters: Making Use of Technology, Media, and Human Resources is an informative, multi-faceted resource on preparedness planning for effective communication before, during, and after a disaster occurs.

Disaster Recovery Planning - Jon William Toigo 2002-08-27
There were 480 companies in the World Trade Center in NYC. Only 230 companies had a disaster recovery plan in place. 100 companies probably did not need one due to their small size. Which leaves 160 companies that did not have a plan in place and as a result they will not be around a year from now! This book explains to system administrators and architects what they need to know to plan for and get through disaster recovery. It incorporates the latest technologies in data storage, networks, server systems, and the Internet (Web-based recovery planning and crisis management) and shows how they can become components of a corporate survival strategy for future disasters. This third edition is completely revised and updated to reflect new information on data storage topologies, challenges for recovery, problem of data re-hosting as well as coverage of latest technologies and trends. The book also covers the lessons learned from WTC disaster and includes

references to the California power outages, new mailroom procedures--due to anthrax scares--and new physical access controls that enable you to know where everyone is in a building by tagging them with an electronic badge.

Disaster Recovery Planning - Jon William Toigo 1989

Offensive and Defensive Security - Harry I Nimon PhD PMP 2013-05-21
Numerous publications exist which examine elements of the security discipline. Few address these elements as a continuum of interrelated functions. None examine the structure of Offensive vice Defensive security in anything other than the domain of international security . This text has been written to fill this gap and to support a course in Offensive-Defensive Security, developed by Henley-Putnam University, which briefly reviews the history of the field of strategic security and its three component parts – protection, intelligence, and counterterrorism – as well as its two distinguishing characteristics: offensive tactics and operations combined with technological innovation. The course then moves to an in-depth assessment of related security areas that focus on defensive tactics and operations: homeland security, criminal justice, conflict and peace studies, and emergency management. While these fields may appear – at first – to be part of strategic security, this course and the associated text explores the critical differences and the fact that they are also critical elements of industrial, governmental, and military security. Emphasis will be placed at an introductory level – both academic and professional distinctions – and discuss the structures associated within these domains. The text is divided into the following key sections: Section 1: The Basics Section 2: The Environment Section 3: Security Planning and Management Section 1 provides an orientation for the reader to a common frame of reference through information provided in the following chapters. It is not intended to be a single source of all relevant information. Additionally, this text is not intended to be the exhaustive single source for all conditions. Rather, it provides a roadmap of considerations on how to reach a specific goal in an efficient and informed manner. Section 2 examines the world the security professional must inhabit, again, in a generalized manner and, likely, in a way never before considered. Elements of neurology, biology, physics, philosophy, logic, analytics, and finance are presented in a manner unique to the changing paradigm of Offensive-Defensive Security

philosophy. The various chapters are labeled as 'terrains' as the best representation of the environmental information to be discussed. Each will approach the topics in as clear a manner possible of current thinking and science within each as critical to the understanding of the total security environment; the how, why, and in what ways they will affect the world of this security paradigm.
