The Experience Economy - B. Joseph Pine 1999
You are what you charge for. And if you're competing solely on the basis of price, then you've been commoditized, offering little or no true differentiation. What would your customers really value? Better yet, for what would they pay a premium? Experiences.

The curtain is about to rise, say Pine Gilmore, on the Experience Economy, a new economic era in which every business is a stage, and companies must design memorable events for which they charge admission. With The Experience Economy, Pine Gilmore explore how successful companies-using goods as props and services as the stage-create experiences that engage customers in an inherently personal way. Why does a cup of coffee cost more at a trendy cafe than it does at the corner diner or when brewed at home? It's the value that the experience holds for the individual that determines the worth of the offering and the work of the business. From online communities to airport parking, the authors draw from a rich and varied mix of examples that showcase businesses in the midst of creating engaging experiences for both consumers and corporate customers. The Experience Economy marks the debut of an insightful, highly original, and yet eminently practical approach for companies to script and stage compelling experiences. In doing so, all workers become actors, intentionally creating specific effects for their customers. And it's the experiences they stage that create memorable-and lasting-impressions that ultimately create transformations within individuals. Make no mistake, say Pine Gilmore: goods and services are no longer enough. Experiences are the foundation for future economic growth, and The Experience Economy is the playbook from which managers can begin to direct new performances.

Architectural Conservation in Asia - John H. Stubbs 2016-11-10
At a time when organized heritage protection in Asia is developing at a rapid pace, Architectural Conservation in Asia provides the first comprehensive overview of architectural conservation practice from Afghanistan to the Philippines. The country-by-country analysis adopted by the book draws out local insights, experiences, best practice and solutions for effective cultural heritage management that will inform study and practice both in Asia and beyond. Whereas architectural conservation in much of the Western world has been extensively documented, this book brings together coverage of many regions where architectural conservation has been understudied. Following on from the highly influential companion volumes on global architectural conservation and architectural conservation in Europe and the Americas, with this book the authors extend their pioneering global examination to the dynamic and evolving field of architectural conservation in Asia. Throughout the book, the authors and regional experts provide local case studies and profile topics that bring depth and insight to this ambitious study. As architectural conservation becomes increasingly global in practice, this book will be of considerable assistance to architectural conservation practitioners, site managers and students of architecture, planning, archaeology and heritage studies worldwide.

Recording, Documentation and Information Management for the Conservation of Heritage Places - Robin Letellier 2015-12-22
This two volume guide provides a comprehensive overview of the fundamental principles and guidelines for documenting cultural heritage places. It seeks to aid heritage managers and decision makers in understanding their roles and responsibilities inn this essential activity. Volume 1 (Guiding Principles) explains why heritage managers must make sure that heritage information fully integrated into all research, investigation and conservation activities. Through the discussion of basic principles, benefits and new approaches, it assists those in charge of preserving immovable cultural heritage by bringing current heritage information practices to a new level. By recording we create a reference for evaluating change and add to the understanding of a site. By documenting we guarantee that information is systematically collected and preserved for future use. By managing the information we make it available and provide a basis for sharing our knowledge and understanding. Volume 2 presents illustrated examples from around the world. Good documentation of a site allows for better understanding of the site's value. Recognizing value and significance is often the first step toward a site's eventual conservation. The information obtained through the documentation process allows conservation professionals to record current conditions, consider appropriate conservation options, plan interventions, apply treatments, and finally, measure the results of their efforts. Documentation can be a tool in resolving a conservation issue. This volume presents several illustration examples from around the world, in various stages of conservation.

Artefacts, Archives, and Documentation in the Relational Museum - Mike Jones 2021-07-15
Artefacts, Archives, and Documentation in the Relational Museum provides the first interdisciplinary study of the digital documentation of artefacts and archives in contemporary museums, while also exploring the implications of polyphonic, relational thinking on collections documentation. Drawing on case studies from Australia, the United Kingdom, and the United States, the book provides a critical examination of the history of collections management and documentation since the introduction of computers to museums in the 1960s, demonstrating how technology has contributed to the disconnection of distributed

collections knowledge. Jones also highlights how separate documentation systems have developed, managed by distinct, increasingly professionalised staff, impacting our ability to understand and use what we find in museums and their ever-expanding online collections. Exploring this legacy allows us to rethink current practice, focusing less on individual objects and more on the rich stories and interconnected resources that lie at the heart of the contemporary, plural, participatory 'relational museum.' Artefacts, Archives, and Documentation in the Relational Museum is essential reading for those who wish to better understand the institutional silos found in museums, and the changes required to make museum knowledge more accessible. The book is a particularly important addition to the fields of museum studies, archival science, information management, and the history of cultural heritage

technologies.
Museum Collections Management - Freda Matassa 2011-05
This landmark publication is the first to draw together all aspects of museum collections management in one handbook. It is designed for anyone with responsibility for a cultural collection and covers everything a collections manager needs to know. It describes professional practice in managing cultural objects and works of art, whatever the size and nature of the collection. The book includes essential information on: Legal aspects of collections Ethical issues such as due diligence and immunity from seizure Up to date concerns such as sustainability, crossing borders and financial constraints Loans, acquisitions, inventory and movement. The book describes all collections management procedures in a simple step-by-step process and is clear and easy to use with all procedures based on international museum practice. Examples of real forms,

policies and documents drawn from major museums are included throughout the text and act as guides for any transaction. Readership: Packed full of practical information, advice and good practice, this will be essential reading for all museum professionals, curators of private collections and museum studies students.

Globalization and Responsibility - Zlatan Delic 2012-06-29
The book "Globalization and Responsibility" consists of 8 chapters. The chapters in the book offer a decentered and dynamic terminology. They show that globalization consists of not only an objective process, but also of a lot of statements that define, describe and analyze the different experiences of the process. The chapters are written by authors and researchers from different academic disciplines, cultures and social contexts, therefore different experiences and scientific analyses on the consequences of globalization have been unified, starting from the multicultural and social epistemology to ethics of responsibility. Each chapter can be read separately, but in a complex, interconnected global universe of intertextuality of our world.
