Classroom Assessment in Action - Mark D. Shermis 2011

Public law has been conceived in many different ways, sometimes overlapping, often conflicting. However in recent years a common theme running through the discussions of public law is one of loss. What function and future can public law have in this rapidly transforming landscape, where globalized states and supranational institutions have ever-increasing importance? The contributions to this volume take stock of the idea, concepts, and values of public law as it has developed alongside the growth of the modern state,

and assess its continued usefulness as a distinct area of legal inquiry and normativity in light of various historical trends and contemporary pressures affecting the global configuration of law in general. Divided into three parts, the first provides a conceptual, philosophical, and historical understanding of the nature of public law, the nature of private law and the relationship between the public, the private, and the concept of law. The second part focuses on the domains, values, and functions of public law in contemporary (state) legal practice, as seen, in part, through its relationship with private domains, values, and functions. The final part engages with the new legal scholarship on global transformation, analysing the changes in public law at the national level, including the new forms of interpenetration of public and private in the market state, as well as exploring the ubiquitous use of public law values and concepts beyond the state.

Teaching Mathematics with Classroom Voting - Kelly Slater Cline 2011

Are you looking for new ways to engage your students? Classroom voting can be a powerful way to enliven your classroom, by requiring all students to consider a question, discuss it with their peers, and vote on the answer during class. When used in the right way, students engage more deeply with the material, and have fun in the process, while you get valuable feedback when you see how they voted. But what are the best strategies to integrate voting into your lesson plans? How do you teach the full curriculum while including these voting events? How do you find the right questions for your students? This collection includes papers from faculty at institutions across the country, teaching a broad range of courses with classroom voting, including college algebra, precalculus, calculus, statistics, linear algebra, differential equations, and beyond. These faculty share their experiences and explain how they have used classroom voting to engage students, to provoke discussions, and to improve how they teach mathematics. This volume should be of interest to anyone who wants to begin using classroom voting as well as people who are already using it but would like to know what others are doing. While the authors are primarily college-level faculty, many of the papers could also be of interest to high school mathematics teachers. --Publisher description.
