Exploration of the Seas - National Research Council 2003-12-04

In the summer of 1803, Thomas Jefferson sent Meriwether Lewis and William Clark on a journey to establish an American presence in a land of unqualified natural resources and riches. Is it fitting that, on the 200th anniversary of that expedition, the United States, together with international partners, should embark on another journey of exploration in a vastly more extensive region of remarkable potential for discovery. Although the oceans cover more than 70 percent of our planet's surface, much of the ocean has been investigated in only a cursory sense, and many areas have not been investigated at all. *Exploration of the Seas* assesses the feasibility and potential value of implementing a major, coordinated, international program of ocean exploration and discovery. The study committee surveys national and international ocean programs and strategies for cooperation between governments, institutions, and ocean scientists and explorers, identifying strengths, weaknesses, and gaps in these activities. Based primarily on existing documents, the committee summarizes priority areas for ocean research and exploration and examines existing plans for advancing ocean exploration and knowledge.

Everybody Wants to Go to Heaven but Nobody Wants to Die: Bioethics and the Transformation of Health Care in America - Amy Gutmann 2019-08-27

NOW FEATURING A NEW AFTERWORD, "PANDEMIC ETHICS" From two eminent scholars comes a provocative examination of bioethics and our culture's obsession with having it all without paying the price. Shockingly, the United States has among the lowest life expectancies and highest infant mortality rates of any high-income nation, yet, as Amy Gutmann and Jonathan D. Moreno show, we spend twice as much per capita on medical care without insuring everyone. A "remarkable, highly readable journey" (Judy Woodruff) sure to become a classic on bioethics, *Everybody Wants to Go to Heaven but Nobody Wants to Die* explores the troubling contradictions between expanding medical research and neglecting human rights, from testing anthrax vaccines on children to using brain science for marketing campaigns. Providing "a clear and compassionate presentation" (Library Journal) of such complex topics as radical changes in doctor-patient relations, legal controversies over in vitro babies, experiments on humans, unaffordable new drugs, and limited access to hospice care, this urgent and incisive history is "required reading for anyone with a heartbeat" (Andrea Mitchell).

Divine - Karen Kingsbury 2010-09-30
Over 200,000 copies sold! With hallmark tenderness and power, #1 New York Times bestselling author Karen Kingsbury weaves a tapestry of life, loss, love, faith—and the miracle of resurrection. Mary Madison is educated and redeemed, a powerful voice in Washington, D.C. But she also has a past that shamed polite society. A survivor of unspeakable horror, Mary has battled paralyzing fear, faithlessness, addiction, and promiscuity. Yet even in her darkest valley, Mary was sustained from afar,

prayed over by a grandmother who clung to the belief that God had special plans for Mary. Now a divine power has set Mary free to bring life-changing hope and love to battered women living in the shadow of the nation's capital—women like Emma Johnson. A single mother fleeing an abusive relationship, Emma wonders whether there is hope for her and her young daughters. She is desperate, broken, and unloved . . . and tempted to commit the unthinkable. Then Mary introduces Emma to the greatest love of all, greater than any either of them has ever imagined.

Man in the Age of Technology - Arnold Gehlen 1980

Scientific Objectivity and Its Contexts - Evandro Agazzi 2014-03-11

The first part of this book is of an epistemological nature and develops an original theory of scientific objectivity, understood in a weak sense (as intersubjective agreement among the specialists) and a strong sense (as having precise concrete referents). In both cases it relies upon the adoption of operational criteria designed within the particular perspective under which any single science considers reality. The "object" so attained has a proper ontological status, dependent on the specific character of the criteria of reference (regional ontologies). This justifies a form of scientific realism. Such perspectives are also the result of a complex cultural-historical situation. The awareness of such a "historical determinacy" of science justifies including in the philosophy of science the problems of ethics of science, relations of science with metaphysics and social dimensions of science that overstep the traditional restriction of the philosophy of science to an epistemology of science. It is to this "context" that the second part of the book is devoted.

In Defiance of Painting - Christine Poggi

1992-01-01

The invention of collage by Picasso and Braque

in 1912 proved to be a dramatic turning point in the development of Cubism and Futurism and ultimately one of the most significant innovations in twentieth-century art. Collage has traditionally been viewed as a new expression of modernism, one allied with modernism's search for purity of means, anti-illusionism, unity, and autonomy of form. This book - the first comprehensive study of collage and its relation to modernism - challenges this view. Christine Poggi argues that collage did not become a new language of modernism but a new language with which to critique modernism. She focuses on the ways Cubist collage - and the Futurist multimedia work that was inspired by it - undermined prevailing notions of material and stylistic unity, subverted the role of the frame and pictorial ground, and brought the languages of high and low culture into a new relationship of exchange.

Haydn, Mozart, and the Viennese School, 1740-1780 - Daniel Heartz 1995

Historians have long tried to place the music of Haydn and Mozart in the lineage of German Lutheran music. In this book, Daniel Heartz shows that the first Viennese school grew from a Catholic inheritance in Italian music and from local tradition, with an admixture of French currents. The generation of composers led by Haydn no longer trained in Italy. By the time young Mozart joined the ranks of the Viennese school, its accomplishments towered above all others of the time. The author's approach can be compared to viewing a majestic mountain range in its totality: the highest peaks take on even greater majesty when seen in their natural context of foothills and lesser peaks. This is how Haydn and Mozart were viewed by their contemporaries, whose world of perception Heartz recreates, using, among other things, the visual art of the period. His focus is on music as a part of cultural history at a particular time and place. Stylistic terms and a priori periods matter less to him than the common denominators of geography, culture, and political history. Book jacket.

Opera and the Enlightenment - Thomas Bauman 2006-12-14

This is a collection of essays to explore the wide dimensions and influence of eighteenth-century opera. In a series of articles by leading scholars in the field, a range of perspectives are offered on the important figures of the day, including Handel, Vivaldi, Gluck, Rameau and Mozart, and on the fundamental problems of creation, revision, borrowing, influence and intertextuality. Other essays reinterpret librettos of serious opera in the French and Italian theatre during the later eighteenth century. Sister arts, notably painting, the novel, ballet and the spoken stage, are also examined in their relationship to the development of opera. Bracketing the collection are studies of the early pastoral opera and of Prokofiev, which expand our historical view of operatic life during the Age of Reason. The book contains numerous rare illustrations, and will be of interest to scholars and students of opera and theatre history.
