Comparative Latin American Politics - Ronald M. Schneider 2011-02

Latin America is a region of great diversity and a rich laboratory for understanding the processes of political development and their interaction with economic growth, social modernization, and cultural influences. Highlighting crucial periods of dynamic socioeconomic and political change, *Comparative Latin American Politics* provides a balanced, concise overview of select Latin American countries without

underestimating the complexities of a region noted for its striking differences. The book focuses on the dominant dyad of Mexico and Brazil while also considering in detail Argentina, Chile, Peru, Columbia, and Venezuela-seven countries that contain four-fifths of the region's inhabitants as well as an even higher proportion of its economy. Recognizing that political institutions and cultures are built over generations, author Ronald M. Schneider divides his analysis into two parts. Part one examines the period from independence to 1930, when countries were coping with an array of post-independence problems and challenges of national consolidation. Part two concentrates on 1930 to the present day and fleshes out current political practices and structures. Each part devotes chapters to specific country coverage as well as meaningful comparative perspectives that illuminate the political evolution of the region and offer salient lessons for other developing parts of the world. Contents Part One. Latin America: Independence to 1930 1. Comparative Perspectives: Independence to 1930 2. Brazil: Independence to 1930 3. Mexico and Argentina: Independence to 1930 4. Microsomes, Drug Oxidations and Chemical Carcinogenesis -

Minor Coon 2012-12-02

Microsomes, Drug Oxidations, and Chemical Carcinogenesis, Volume II, documents the proceedings of the 4th International Symposium on Microsomes and Drug Oxidations held in Ann Arbor, July 1979. The symposium reviewed progress in the understanding of scientific and biomedical problems from a biochemical, biophysical, pharmacological, and toxicological perspective. Volume I contained 117 contributions made by researchers at the symposium, which were organized into three sections (Sections I-III). This second volume contains 122 contributions, divided into four sections (Sections IV-VII). The papers on Section IV examine the metabolic fate of oxygenated compounds. Section V provides studies on microsomal enzymes and lipid metabolism. Section VI includes papers on microsomal enzymes and toxicity of foreign compounds. Section VII covers microsomal enzymes and chemical mutagenesis and carcinogenesis. This book seeks to aid future progress in understanding the complexities of metabolic transformations by these versatile enzyme systems that act on physiologically important lipids as well as on a wide array of foreign substances, including drugs, anesthetics, industrial chemicals, food additives, pesticides, carcinogens, and nonnutrient dietary chemicals.
