Master Low Light Photography - Heather Hummel 2016-06-20

Most photographers shoot in abundant sunlight. The problem is, full sun creates harsh, unflattering shadows that undermine images. Working in low light — in early morning or at twilight or when Mother Nature cues the clouds or fans in the fog — can help photographers produce stand-out images. Photographers will learn to analyze light and determine the best camera settings for creating captivating low-light images outdoors. Composition—the artful arrangement of all of the image elements — is detailed next. From there, Hummel provides text and illustrations to guide readers through the art of producing low-light images of sunrises and sunsets; the moon and stars; hot air balloons, city lights, and fireworks; and nature and landscape photography. Hummel then moves on to discuss how photographers can use filters and camera-stabilizing tools to enhance the technical quality of their shots. Armed with the applications outlined in this book, photographers will be able to produce outstanding shots during off-peak hours.

Mastering Exposure - Mark Chen 2015-11-16

In photography, every decision, creative and technical, rides on achieving a good exposure. When shooting portraits or products, landscapes or architecture, we must control our camera's settings to ensure that just the right amount of light is allowed into the camera. When we strike the right balance in our exposure, we have a full range of tones, from pure white to deep blacks. We have rich visual detail. We have a sense of dimension. The colors and tones and contrast in our images weave the visual story of our subject and scene in a way that visually computes. As a result, we see just the image we strove to create, rendered perfectly in a way that satisfies our creative vision. In this book, Mark Chen shows you how to take full control over the science of exposure, providing you with the foundational skill-set you need to maximize your artistic vision.
