This new edition of *Federal Tax Accounting*, part of the Graduate Tax Series, has been updated with new problems, discussions, commentary,

analysis, and additional coverage of many topics. Chapters 1 and 7 have been substantially revised and reorganized. Chapters 5, 6, and 7 have expanded text with more examples and few but more focused problems. Other changes include: Revised and expanded discussion of "taxable year" with problems, now in the first chapter; Expanded discussion of tax accounting vs. financial accounting; Discussion of Section 409A regulations, with a new problem; Expanded discussion of inventories, with additional problems; Additional commentary on accrual of income of doubtful collectability and bad debts, including *Trinity Indus. v. Commissioner* and *Rendall v. Commissioner*; Updated discussion of Section 448(d) (5) regulations on non-accrual experience method; New problem dealing with trade discounts, in light of *Westpac Pacific Foods v. Commissioner* and the Advance Trade Discount Method of Rev. Proc. 2007-53; Updated material on proposed regulations on capitalization of tangible property expenditures; Expanded treatment of advertising expenditures; Expanded discussion of investment interest, prepaid interest and personal interest, including Chief Counsel Adv. 2009-11-007, applying qualified residence interest limitation per residence as well as per taxpayer; Expanded explanation of original issue discount and market premium with examples; Commentary on gifts of the use of property in light of the *Dickman* decision and the Section 7872 regulations; Extensive additional text and explanation, with examples, of various aspects of installment reporting, with fewer, more focused problems; A new section on installment sales coupled with a like-kind exchange with boot, with example and problem; Expanded discussion of NOL carryovers, including the text of Rev. Rul. 81-88 and commentary; Comment on accrual method issues similar to those in *United States v. Lewis*; and, Expanded detailed analysis and discussion of Section 1341, with the text of Rev. Rul. 68-153, *Zadoff v. United States*, and *Barrett v. Commissioner*. The sophisticated realistic problems with a transactional focus are an integral part of Federal Tax Accounting. These problems require careful analysis and application of the code and regulation provisions, administrative pronouncements, case law, and other relevant sources. Perhaps more important for a graduate tax program, the

problems not only require careful analysis, but the application requires dealing with situations in which the most careful reading of the materials does not supply the answer. The Teacher's Manual, available only to professors, contains sample syllabi and comprehensive analysis of the problems presented in the coursebook.

**The Financial Numbers Game** - Charles W. Mulford 2011-03-10  
Praise for The Financial Numbers Game "So much for the notion 'those who can, do-those who can't, teach.' Mulford and Comiskey function successfully both as college professors and real-world financial mercenaries. These guys know their balance sheets. The Financial Numbers Game should serve as a survival manual for both serious individual investors and industry pros who study and act upon the interpretation of financial statements. This unique blend of battle-earned scholarship and quality writing is a must-read/must-have reference for serious financial statement analysis." --Bob Acker, Editor/Publisher, The Acker Letter "Wall Street's unforgiving attention to quarterly earnings presents ever increasing pressure on CFOs to manage earnings and expectations. The Financial Numbers Game provides a clear explanation of the ways in which management can stretch, bend, and break accounting rules to reach the desired bottom line. This arms the serious investor or financial analyst with the healthy skepticism required to drive beyond reported results to a clear understanding of a firm's true performance." --Mark Hurley, Managing Director, Training and Development, Global Corporate and Investment Banking, Bank of America "After reading The Financial Numbers Game, I feel as though I've taken a master's level course in financial statement analysis. **Federal Taxation of Property Transactions** - David L. Cameron  
2012-09-04

Two significant complications affect the taxation of property transactions. The first complication is the special treatment of capital gains and losses. The second complication arises from the time value of money. This book aims to provide students with an appreciation for these two significant complexities through the descriptive materials and problems presented. Chapter 1 introduces the concepts of basis and realization that are fundamental to the taxation of all transactions involving property. Chapter 2 follows with the effects of taxing gains and losses from capital assets differently from ordinary gains and losses. Chapter 3 deals with liabilities, which are essentially the opposite of assets or property, so that they can be considered negative property. Chapter 4 covers the rules applicable to the capitalization of costs incurred in the creation or acquisition of property and the recovery of those costs through a variety of expensing, amortization, and depreciation provisions. Chapter 5 covers non-recognition transactions (other than transfers involving partnerships, corporations or trusts) in which gain or loss is not recognized on disposition but is deferred through the mechanism of substituted basis. Chapter 6 deals with deferred compensation issues and other special problems arising in executive compensation arrangement using employer stock or stock options that reflect the lure of capital gain treatment. Chapter 7 covers the complexities that arise from the cliché that property is a bundle of rights, particularly when the ownership and long-term right to possession is divided under a lease or similar arrangement. Finally, Chapter 8 covers a number of special provisions that affect the deductibility of losses, including the wash sales rules, limitations on related party transactions, the at-risk and passive loss rules, and losses arising in certain leasing transactions. Principles of Capitalization - James L. Atkinson

...explores the theory and practical application of the fundamental principles determining whether an expenditure may be currently deducted as an ordinary and necessary business expense or whether instead it must be capitalized and recovered through another tax accounting mechanism, such as depreciation. This Portfolio instead focuses upon the more traditional capitalization principles underlying §263(a), the decades of case law interpreting those principles, and the government's recent efforts to rationalize this area through the issuance of regulations.
