[The Photo Ark](#) - Joel Sartore 2017

This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing

extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet.

[Biology](#) - Eldra Solomon 2014-01-01

Solomon/Martin/Martin/Berg, BIOLOGY is often described as the best majors text for LEARNING biology. Working like a built-in study guide, the superbly integrated, inquiry-based learning system guides you through every chapter. Key concepts appear clearly at the beginning of each chapter and learning objectives start each section. You can quickly check the key points at the end of each section before moving on to the next one. At the end of the chapter a specially focused summary provides further reinforcement of the learning objectives and you are given the opportunity to test your understanding of the material. The tenth edition offers expanded integration of the text's five guiding themes of biology (the evolution of life, the transmission of biological information, the flow of energy through living systems, interactions among biological systems, and the inter-relationship of structure and function). Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Manual of Ornithology - Noble S. Proctor 1993-01-01

"Here is a volume that has no parallel. . . . A good reference book for those interested in the details of avian anatomy."--Science Books & Films
"A gold mine of facts. . . . Every library and biology department, as well as every birder, should have a copy close at hand."--Roger Tory Peterson, from the foreword
One of the most heavily illustrated ornithology references ever written, Manual of Ornithology is a visual guide to the structure and anatomy of birds--a basic tool for investigation for anyone curious about the fascinating world of birds. A concise atlas of anatomy, it contains more than 200 specially prepared accurate and clear drawings that include material never illustrated before. The text is as informative as the drawings; written at a level appropriate to undergraduate students and to bird lovers in general, it discusses why birds look and act the way they do. Designed to supplement a basic ornithology textbook, the Manual of Ornithology covers systematics and evolution, topography, feathers and flight, the skeleton and musculature, and the digestive, circulatory, respiratory, excretory, reproductive, sensory, and nervous systems of birds, as well as field techniques for watching and studying birds. Each chapter concludes with a list of key

references for the topic covered, with a comprehensive bibliography at the end of the volume.

Biology of Spiders - Rainer Foelix 2011-05-05

One of the only books to treat the whole spider, from its behavior and physiology to its neurobiology and reproductive characteristics, Biology of Spiders is considered a classic in spider literature. First published in German in 1979, the book is now in its third edition, and has established itself as the supreme authority on these fascinating creatures. Containing five hundred new references, this book incorporates the latest research while dispelling many oft-heard myths and misconceptions that surround spiders. Of special interest are chapters on the structure and function of spider webs and silk, as well as those on spider venom. A new subchapter on tarantulas will appeal especially to tarantula keepers and breeders. The highly accessible text is supplemented by exceptional, high-quality photographs, many of them originals, and detailed diagrams. It will be of interest to arachnologists, entomologists, and zoologists, as well as to academics, students of biology, and the general reader curious about spiders.

Concepts of Biology - Samantha Fowler 2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their

classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Photo Atlas for General Biology - Darrell Vodopich 2014-03-11

Photographic Atlas of Entomology and Guide to Insect Identification - James L. Castner 2000

Although photo atlases in other fields of the life sciences have long been available to aid students in their studies, there has never been one for entomology. One reason for this is the great number of photos necessary for such a book to be of any value. Fortunately for students, Dr. Castner has spent the past 25 years photographing insects with his work appearing in everything from National Geographic to Ranger Rick. Dr. Castner's experience in teaching and working with students has allowed him to produce a work that exactly addresses their needs. His Photographic Atlas of Entomology is simple, thorough, user-friendly, and

very reasonably priced. It should be a great help to any entomology student, as well as to the professors teaching entomology courses.

Zooarchaeology and Field Ecology - Jack M. Broughton 2016

"The only field guide and laboratory manual to cover both the osteology and the natural history of western North American vertebrates in a single volume This photographic atlas, developed over twenty years of teaching in the field, expedites the work of the zooarchaeologist by integrating both osteology and wildlife ecology into a single volume. Zooarchaeology, the study of animal remains found at archaeological sites, is interdisciplinary in nature, requiring students and researchers to not only master the technical skills of identifying fragmentary bones and teeth but also to develop a deep understanding of the taxonomy, natural history, behavior, and ecology of the species identified. Until now, these topics have always been treated separately. This book is the only field guide and laboratory manual to combine animal ecology and natural history with the detailed osteology of all the vertebrate classes (fishes, amphibians, birds, and mammals) and all the primary orders native to western North America. Skeletal images are shown at a variety of magnifications and views and are accompanied by photographs of the animals in their characteristic habitats"--
