The Cambridge International Handbook of Lean Production - Thomas Janoski 2021-03-11

This handbook focuses on two sides of the lean production debate that rarely interact. On the one hand, management and industrial engineering scholars have presented a positive view of lean production as the epitome of efficiency and quality. On the other hand, sociology, industrial relations, and labor relations

scholars focus on work speedups, management by stress, trade union positions, and self-exploitation in lean teams. The editors of this volume understand the merits of both views and present them accordingly, bridging the gaps among five disciplines and presenting the best of each perspective. Chapters by internationally acclaimed authors examine the positive, negative and neutral possible effects of lean, providing a global view of lean production while adjusting lean to the cultural and political contexts of different nation-states. As the first multi-lens view of lean production from academic and consultant perspectives, this volume charts a way forward in the world of work and management in our global economy.

Handbook Of Financial Econometrics, Mathematics, Statistics, And Machine Learning (In 4 Volumes) - Cheng-few Lee 2020-07-30

This four-volume handbook covers important concepts and tools used in the fields of financial econometrics, mathematics, statistics, and machine learning. Econometric methods have been applied in asset pricing, corporate finance, international finance, options and futures, risk management, and in stress testing for financial institutions. This handbook discusses a variety of econometric methods, including single equation multiple regression, simultaneous equation regression, and panel data analysis, among others. It also covers statistical distributions, such as the binomial and log normal distributions, in light of their applications to portfolio theory and asset management in addition to their use in research regarding options and futures contracts. In both theory and methodology, we need to rely upon mathematics, which includes linear algebra, geometry, differential equations, Stochastic differential equation (Ito calculus), optimization, constrained optimization, and others. These forms of mathematics have been used to derive capital market line, security market line (capital asset pricing model), option pricing model, portfolio analysis, and others. In recent times, an increased importance has been given to computer technology in financial research. Different computer languages and programming techniques are important tools for empirical research in finance. Hence, simulation, machine learning, big data, and financial payments are explored in this handbook. Led by Distinguished Professor Cheng Few Lee from Rutgers University, this multi-volume work integrates theoretical, methodological, and practical issues based on his years of academic and industry experience.

World Development Report 2018 - World Bank Group 2017-10-16

Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR—LEARNING to Realize Education's Promise—is the first ever devoted entirely to education. And the time is right: education has long been critical to human welfare, but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity, but fulfilling its potential requires better policies—both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those countries aspire to. And too often these shortcomings are hidden—so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.

Unternehmensanleihen sind Fluch und Segen zugleich. Für solvente Schuldner eröffnet sich die Chance, eine Vielzahl potentieller Investoren mit einem leicht handelbaren und flexiblen Investitionsangebot anzusprechen. In einer finanziell prekären Situation bereiten Informations-, Koordinations- und Kooperationsprobleme einen fruchtbaren Nährboden für opportunistische Strategien. Der Vergleich von Restrukturierungs- und Insolvenzverfahren zu privaten und vertraglichen Institutionen zeigt auf, wie sich Mehrwerte insbesondere in den vor- und außerinsolvenzlichen privaten Verfahren schaffen lassen. Dazu werden Restrukturierungs-, Insolvenzverfahren, Anleihebedingungen, Institutionen der Gläubigerorganisation, Einschränkungen der freien Vertragsgestaltung (wie etwa das Abstimmungsverbot in den USA) genauso kritisch diskutiert wie mögliche Umgehungsstrategien. Der Fokus liegt auf dem US-amerikanischen und englischem Recht, ergänzt durch eine kurze Analyse des deutschen Rechts.

Goodwill Impairment - Thorsten Sellhorn 2004

In 2001, goodwill amortization in the US was eliminated in favor of an impairment-only approach, which, according to critics, gives managers vast discretion and opportunities for earnings management. Prior research suggests that discretionary asset write-offs are associated with economic factors and managers' financial reporting objectives. Based on a systematic literature review, this study investigates for a comprehensive sample of US firms the determinants of goodwill write-off behavior. Regression analysis shows that write-off behavior is significantly explained by firms' economic properties. Only in large, high-profile firms, incentives appear to be significant determinants. These findings suggest that the impairment-only approach does capture goodwill impairment at least to some extent.

The Routledge Handbook of Tourism and Sustainability - C. Michael Hall 2015-02-11

Routledge Handbook of Tourism and Sustainability from C. Michael Hall, Stefan Gössling, Daniel Scott is one of the winners of the ITB BookAwards 2016 in the category Specialist tourism literature! Sustainability remains one of the major issues in tourism today. Concerns over climate and environmental change, the fallout from the global economic and financial crisis, and the seeming failure to meeting UN Millennium development goals have only reinforced the need for more sustainable approaches to tourism, however they be defined. Given the centrality of sustainability in tourism curricula, policies, research and practice it is therefore appropriate to prepare a state of the art handbook on the relationship between tourism and sustainability. This timely Handbook of Tourism and Sustainability is developed from specifically commissioned original contributions from recognised authors in the field, providing a systematic guide to the current state of knowledge on this area. It is interdisciplinary in coverage and international in scope through its authorship and content. The volume commences with an assessment of tourism's global environmental, e.g. climate, emissions, energy use, biodiversity, water use, land use, and socio-economic

effects, e.g. economic impacts, employment and livelihoods, culture. This then provides the context for sections outlining the main theoretical frameworks and constructs that inform tourism and sustainability, management tools and approaches, and the approaches used in different tourism and travel industry sectors. The book concludes by examining emerging and future concerns in tourism and sustainability such as peak-oil, post-carbon tourism, green economy and transition tourism. This is essential reading for students, researches and academics interested in the possibilities of sustainable forms of tourism and tourism's contribution to sustainable development. Its assessment of tourism's global impact along with its overviews of sectoral and management approaches will provide a benchmark by which the sustainability of tourism will be measured for years to come.

Global Patent Protection and Enforcement of In Vitro Diagnostic Inventions - Lisa Mueller 2019-11-01

Like all inventors, developers of in vitro medical diagnostic tests depend on patent protection that is enforceable against alleged infringers and ensures royalties and other payments. Due to recent United States (US) court decisions that have made the patentability of such tests untenable in the US, there is an expectation that patent applications for in vitro diagnostic inventions will increase in commercially important countries that provide broader protection. Accordingly, this book thoroughly describes the patentability requirements and enforcement challenges faced by in vitro diagnostic inventions in nine major worldwide markets, providing practical tips on how to overcome these challenges and build a globally enforceable patent portfolio for such inventions. For each of nine jurisdictions - Australia, Canada, China, the European Union, India, Japan, Russia, South Africa and the US - an author knowledgeable in the patent law of his or her country examines such elements as the following: subject matter eligibility; specific

patentability hurdles; recent and relevant cases; specific issues relating to enforcement; and exceptions to infringement. Specific examples of types of claims (both immunohistochemistry and molecular in vitro diagnostics) are provided, along with tips for drafting and prosecuting applications and best practices for forestalling rejections based on subject matter eligibility and prior art. This book is the first to provide a comprehensive global examination of the patentability of in vitro diagnostic tests. The editor, a patent attorney globally known for her work with the pharmaceutical industry, has assembled a compendium of international expertise that will prove indispensable to patent practitioners (prosecution as well as litigation), corporate research teams, pharmaceutical and other companies and academics throughout the world.

Earnings Quality - Jennifer Francis 2008

This review lays out a research perspective on earnings quality. We provide an overview of alternative definitions and measures of earnings quality and a discussion of research design choices encountered in earnings quality research. Throughout, we focus on a capital markets setting, as opposed, for example, to a contracting or stewardship setting. Our reason for this choice stems from the view that the capital market uses of accounting information are fundamental, in the sense of providing a basis for other uses, such as

stewardship. Because resource allocations are ex ante decisions while contracting/stewardship assessments are ex post evaluations of outcomes, evidence on whether, how and to what degree earnings quality influences capital market resource allocation decisions is fundamental to understanding why and how accounting matters to investors and others, including those charged with stewardship responsibilities. Demonstrating a link between earnings quality and, for example, the costs of equity and debt capital implies a basic economic role in capital allocation decisions for accounting information; this role has only recently been documented in the accounting literature. We focus on how the precision of financial information in capturing one or more underlying valuation-relevant constructs affects the assessment and use of that information by capital market participants. We emphasize that the choice of constructs to be measured is typically contextual. Our main focus is on the precision of earnings, which we view as a summary indicator of the overall quality of financial reporting. Our intent in discussing research that evaluates the capital market effects of earnings quality is both to stimulate further research in this area and to encourage research on related topics, including, for example, the role of earnings quality in contracting and stewardship.
