All My Relations: Understanding the Experiences of Native Americans with Disabilities -

Hilary N. Weaver 2018-04-19
Native Americans suffer disproportionately from many social and health disparities. High rates of poverty, exposure to environmental toxins, and various forms of violence all increase the risk of health problems, including disabilities, yet there is very

little published scholarship concerning Native American experiences with disabilities. In collecting contributions on various aspects of disability in Native American populations in one volume, this book seeks to redress this lack of attention. Writing about regions of the United States, Canada, and Australia, and spanning a diverse range of settings from remote rural areas, to reservations, to college

campuses, the authors are attentive to the impact of specific environments on their inhabitants. Taking into account both physical and social environment, and recognizing the importance of cultural context, this book is a good starting point for anyone interested in developing a better understanding of the experience of Native peoples living with disabilities. This book was originally published as a special issue of the *Journal of Social Work in Disability & Rehabilitation*.

Touch Screen Tablets

Touching Children's Lives -

Joanne Tarasuik 2018-02-28

Touch screen tablets have greatly expanded the technology accessible to preschoolers, toddlers and even infants, given that they do not require the fine motor skills required for using traditional computers. Many parents and educators wish to make evidence-based decisions regarding young children's technology use, yet technological advancements continue to occur faster than researchers can keep up with. Accordingly, despite touch screen tablets entering society

more than 5 years ago, we are in the infancy of research concerning interactive media and children. The topic has gained traction in the past couple of years. For example theoretical papers have discussed how interactive media activities differ from physical toys and passive media (Christakis, 2014), and how educational apps development should utilise the four "pillars" of learning (Hirsh-Pasek et al., 2015). Yet there has been little experimental research published on young children and touch screen use.

The Therapeutic State - James L. Nolan 1998

An analysis of the commingling of the therapeutic and political cultures in America. Nolan (anthropology and sociology, Williams College) supplies his background by looking at trends such as the emotivist ethic, the pathologization of human behavior, the rise of a new priestly class, and the legitimization of the state. He then looks specifically at emotionally and psychologically based personal injury cases, public education from the colonial period through the progressive era to what he calls "therapeutic education," welfare policy, and presidential election debates

from Lincoln-Douglas through Clinton-Bush-Perot. Nolan concludes with an examination of the "therapeutic state" itself, discussing therapeutic utilitarianism, postmodernism, and coercion. Annotation copyrighted by Book News, Inc., Portland, OR

Educational and Psychological Testing - Martin Holeman

1972-03-15

Educational and psychological tests are often used in ways which touch most intimately the lives of people. For example, tests may influence who gets a job or who is selected to attend a college or graduate school. But not everyone has agreed that tests are a good thing. Over the past twenty years a wave of complaints has led to congressional hearings, court cases, and formal grievances before state and federal commissions. Holmen and Docter have analyzed these complaints and criticisms not only by considering the tests themselves but through examining the ways tests are used as elements in assessment systems. The applications of tests in clinical and counseling work, in educational achievement testing, and in personnel selection is discussed and evaluated. While the least amount of testing is in the personnel selections area, this is where the most complaints are found. Educational achievement

testing has by far the largest testing programs and a wide range of criticisms has been voiced concerning this kind of assessment. Testing in connection with clinical and counseling work has generated the least public concern. An extensive analysis is given of the organizations which comprise the testing industry, including the various developers and publishers of tests and also test scoring organizations. The users of tests are considered from the standpoint of their professional training and also in terms of how their organizations influence technical standards of test development.
