High Acuity Nursing - Pamela Stinson Kidd 2001

A supplement for a variety of junior/senior-level courses in Critical Care or Advanced Med-Surg Nursing courses and others throughout the nursing curriculum. Written by

practicing nurses in acute care, this text provides students with a basic understanding of complex patients and the ability to provide nursing care across a variety of settings by using a series of reality-based, self-paced, self-contained modules that focus on multiple system problems frequently encountered in working with high acuity patients. Using a "nuts and bolts" approach, it addresses essentials by using examples, analogies, and metaphors; focuses on concepts and principles that can be applied across practice settings and patient populations; and includes nursing diagnoses. The modules progress from simple to complex and contain pretests and posttests with answers, learning objectives, glossary, abbreviations, and review questions and answers.

The Future of Nursing -

Institute of Medicine

2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to

meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates.

Furthermore, regulatory and

institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Teaching and Learning in Nursing - Gregor Stiglic
2017-05-17

A significant body of knowledge is the basis for a holistic, caring and scientific evidence-based nursing education in practice for professional development. Quality teaching leads to good learning and both aspects are two of the main issues of quality assurance in nursing education today. To begin with, not all nursing students have the same levels of motivation or learning abilities. It is with cognisance of providing quality care for patients that the role of the nurse educator has to be to enhance nursing students' learning using scientific evidence based teaching. Research around teaching and

learning processes is an important part of the delivery of quality education, which in turn impacts on students' learning results and experiences, thereby, ensuring holistic biopsychosocial care to patients. The main aim of teaching and learning in nursing, at all levels, is to enhance the nurses' contribution to assist the individuals, families and communities in promoting and preserving health, well-being and to efficiently respond to illnesses. We hope that this book can be used as a resource to increase the body of knowledge in teaching and learning in nursing, thereby enhancing the role and contribution of health care professionals to clinical practice.
