Bell Canada and the City of Hamilton are pleased to announce they will be moving forward together with a Bell investment of approximately \$400 million to expand broadband Internet access in urban and rural areas of Hamilton, the largest digital infrastructure investment in the City's history. Over the next five years, Bell and a Bell-funded team of City of Hamilton staff will bring direct fibre network connections to more than 200,000 homes and business locations throughout the City with zero cost to taxpayers. The network will provide consumers with access to data speeds up to 1.5 gigabits per second, the fastest home Internet speeds in Canada. Working in partnership with the Hamilton Chamber of Commerce's Digital Infrastructure

Task Force, gaps in digital infrastructure across the community were identified. Subsequently, the City worked to increase investment in digital infrastructure to address the gaps. As part of the plan to enhance Hamilton's standing as a Digital City, Mayor Eisenberger requested that broadband speeds be enhanced for all of urban Hamilton, business parks and major commercial areas, and rural areas in the community. In addition to premium network support for the City's business community, the Bell project includes the expansion of high-speed Bell Wireless Home Internet service to 8,000 homes in rural Hamilton. This innovative 5G capable technology delivered over Bell's advanced LTE wireless network provides broadband residential Internet access for small towns, farming communities and other less populated locations. Bell will work in close cooperation with the City and local contractors, including Aecon, Telecon and Sentrex, to employ innovative techniques to minimize disruption to residents and businesses throughout the project. The majority of the network build will consist of new fibre installed underground, with additional fibre located on Bell, Hydro One and Alectra Utilities poles.

But it's now one that also needs to be addressed in the digital age. Digital Legacy: Take Control Of Your Online Afterlife provides both the context of how we got here but also the right guidance to move forward with your planning today. Authored by two tech executives (also former Googlers) and founders of the digital-legacy platform GoodTrust -- Daniel Sieberg and Rikard Steiber, CEO and founder of GoodTrust -- the book outlines the pitfalls, challenges and opportunities that are important for all of us to tackle.

*I Will Survive* - Gloria Gaynor 2014-03-11

*I Will Survive* is the story of Gloria Gaynor, America's "Queen of Disco." It is the story of riches and fame, despair, and finally salvation. Her meteoric rise to stardom in the mid-1970s was nothing short of phenomenal, and hits poured forth that pushed her to the top of the charts, including "Honey Bee," "I Got You Under My Skin," "Never Can Say Goodbye," and the

song that has immortalized her, "I Will Survive," which became a #1 international gold seller. With that song, Gloria heralded the international rise of disco that became synonymous with a way of life in the fast lane - the sweaty bodies at Studio 54, the lines of cocaine, the indescribable feeling that you could always be at the top of your game and never come down. But down she came after her early stardom, and problems followed in the wake, including the death of her mother, whose love had anchored the young singer, as well as constant battles with weight, drugs, and alcohol. While her fans always imagined her to be rich, her personal finances collapsed due to poor management; and while many envied her, she felt completely empty inside. In the early 1980s, sustained by her marriage to music publisher Linwood Simon, Gloria took three years off and reflected upon her life. She visited churches and revisited her mother's old Bible. Discovering the world of gospel, she made a commitment to Christ that sustains her to this day.

*Transdisciplinary Engineering: A Paradigm Shift*  
- C.-H. Chen 2017-07-20

Concurrent Engineering is based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). Its main goal is to increase the efficiency and effectiveness of the PCP and reduce errors in the later stages, and to incorporate considerations for the full lifecycle, through-life operations, and environmental issues of the product. It has become the substantive basic methodology in many industries, and the initial basic concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches and tools. This book presents the proceedings of the 24th ISPE Inc. International Conference on Transdisciplinary (formerly: Concurrent) Engineering (TE 2017), held in Singapore, in July 2017. The 120 peer-reviewed papers in the book are divided into 16 sections: air transport and traffic operations and management; risk-aware supply chain intelligence; product innovation and marketing management; human factors in design; human engineering; design methods and tools; decision supporting tools and methods; concurrent engineering; knowledge-based engineering; collaborative engineering; engineering for sustainability; service design; digital manufacturing; design automation; artificial intelligence and data analytics; smart systems and the Internet of Things. The book provides a comprehensive overview of recent advances in transdisciplinary concurrent engineering research and applications, and will be of interest to researchers, design practitioners and educators working in the field.
