The Psychology of Prejudice - Lynne M. Jackson 2019-12-10

"Given the weaponization of cultural and ideological differences in politics, education, and social media today, the need to understand and fight prejudice is urgent. This second edition of Lynne Jackson's seminal text presents a significantly updated review of the psychological underpinnings of prejudicial thoughts and behaviors. Jackson synthesizes new research from various areas of psychology to analyze contemporary examples of prejudice, including anti-immigrant policies, police violence against minorities, anti-woman and LGBTQ backlash, and ageist cultural biases. She also explores frequently overlooked issues related to prejudice, such as environmental inequality and speciesism. Drawing from literature in evolutionary, developmental, social, and personality psychology, Jackson explores the biological and environmental roots of prejudice, including how people develop essentialist views in childhood and learn to favor ingroup members and dehumanize outgroup members. She draws connections between these beliefs and other

social justice issues showing how they give rise to greater social problems like inequality and political polarization. She also offers readers a blueprint for overcoming these deeply embedded biases by improving intergroup attitudes and building communities to create progressive social change"--

Love to Hate - Jody M. Roy 2002

Memory enables us to make experience meaningful and to form coherent identities for ourselves and intelligible perceptions of others. Indeed, our ability to imagine, anticipate, and create the future is directly commensurate with our ability to retrieve and recollect past experiences. But for all its vital importance in human cognition, for all that it seems so ordinary and obvious, memory remains in many ways as complex and mysterious today as it seemed to ancient philosophers. We need only to think about the "tip-of-the-tongue" experience to wonder how memories are formed, where they reside in our brains, and why some are retained, while others are forgotten. What is the difference between long- and short-term memory? Can memory be strengthened? Memories Are Made of This is an account of current memory science that offers answers to these and a host of other questions, comprehensively distilling much diverse and rigorous science. It delves into the biology of memory functions and researches into the mechanics and genetics of memory and the importance of emotions, particularly those resulting from trauma, in the memory process. Of special focus are investigations of cognition in other species. Are we the only animals who remember and forget? If not, are there commonalties in the memories of different species? The book also surveys our understanding of the effects of injury and disease on memory and concludes with an assessment of emerging pharmacological efforts to preserve and protect our memories and, in turn, ourselves.

The Psychology of Prejudice - Mark P. Zanna 2013-04-15

This volume consists of expanded and updated versions of papers presented at the Seventh Ontario Symposium on Personality and Social Psychology. The series is designed to bring together scholars from across North America who work in the same substantive area, with the goals of identifying common concerns and integrating research findings. The topic of this symposium was the psychology of prejudice and the presentations covered a wide variety of issues. The papers present state-of-the-art research programs addressing prejudice from the point of view of both the bigoted person as well as the victim of bigotry. The chapter authors confront this issue from two major -- and previously separate -- research traditions: the psychology of attitude and intergroup conflict. The chapters are organized in the following sequence of topics: the determinants and consequences of stereotypes, individual differences in prejudicial attitudes, intergroup relations, the responses of victims to prejudice and discrimination, and an integrative summary/commentary. Illustrating both the diversity and vitality of research on the psychology of prejudice, the editors hope that this volume will stimulate further research and theorizing in this area.

Nelson 2015-08-19

This Handbook is a comprehensive and scholarly overview of the latest research on prejudice, stereotyping, and discrimination. The Second Edition provides a full update of its highly successful predecessor and features new material on key issues such as political activism, economic polarization, minority stress, same-sex marriage laws, dehumanization, and mental health stigma, in addition to a timely update on how victims respond to discrimination, and additional coverage of gender and race. All chapters are written by eminent researchers who explore topics by presenting an overview of current research and, where appropriate, developing new theory, models, or scales. The volume is clearly structured, with a broad section on cognitive, affective, and neurological processes, and there is inclusion of studies of prejudice based on race, sex, age, sexual orientation, and weight. A concluding section explores the issues involved in reducing prejudice. The Handbook is an essential resource for students, instructors, and researchers in social and personality psychology, and an invaluable reference for academics and professionals in sociology, communication studies, gerontology, nursing, medicine, as well as government and policymakers and social service agencies.
