Arts Education and Social-Emotional Learning Outcomes

Among K-12 Students - Joseph Maurer 2019-04-14

Social and emotional learning is a topic of increasing focus in the education sector. Though definitions and terminology

vary, at its core this trend reflects an increased interest among educators, administrators, parents, and other stakeholders in students' development of individual and interpersonal skills beyond the realm of academic achievement. This project, conducted as a partnership between Ingenuity and the University of Chicago Consortium on School Research, consists of two components: a review of literature on this topic and an interview-based fieldwork component with educators, administrators, students, and parents in Chicago Public Schools. The authors reviewed more than 200 studies on arts education spanning six decades. They also conducted focus groups and interviews with key participants in the arts education process--including educators, administrators, students, and parents--to evaluate evidence of the effects of arts education on social-emotional development in school and after-school settings. They found a

widespread belief that arts education contributes to children's and adolescents' social-emotional development.

The Global Forest Sector - Eric Hansen 2013-12-04

Changes in production, demand, supply, and trade patterns; the impact of green building and bioenergy on industry practices and policy infrastructure; and new

economies with production advantages and large consumption bases all present challenges and opportunities in the forest sector. With contributions from leading experts in academia and professional organizations, *The Global Forest Sector: Changes, Practices, and Prospects* fills a gap in the literature that is preventing students, scholars, and policy makers from developing a timely, structured, big-picture view of forest sector business. In addition, the book reviews current thinking on a wide variety of business management issues in the forest sector. The book covers managing change in the global forest sector and the impact of globalization on forest users. It discusses markets and market forces, new products and product categories, and the influence of China and Russia. The book then examines the environmental paradigm, including environmental activism, sustainability, and the impact of green building and bioenergy. The book concludes

with coverage of the role of information technology, corporate social responsibility, innovation, and next steps. Overall, this book helps readers both develop a bird's eye view of the changes surrounding the forest sector as well as have a magnified view of numerous managerial issues associated with these changes. The content paints a picture of the current and changing forest sector including the state of forests, the nature of markets, the newly emerged patterns of stakeholder impact, and evolution of key business practices. It provides the foundation needed to develop the conservation-based economy required for future success in the global forest sector.

Molybdenum-99 for Medical Imaging - National Academies of Sciences, Engineering, and Medicine 2016-11-28

The decay product of the medical isotope molybdenum-99 (Mo-99), technetium-99m (Tc-99m), and associated medical isotopes iodine-131 (I-131) and xenon-133 (Xe-133) are used worldwide for medical diagnostic imaging or therapy. The United States consumes about half of the world's supply

of Mo-99, but there has been no domestic (i.e., U.S.-based) production of this isotope since the late 1980s. The United States imports Mo-99 for domestic use from Australia, Canada, Europe, and South Africa. Mo-99 and Tc-99m cannot be stockpiled for use because of their short half-lives. Consequently, they must be routinely produced and delivered to medical imaging centers. Almost all Mo-99 for medical use is produced by irradiating highly enriched uranium (HEU) targets in research reactors, several of which are over 50 years old and are approaching the end of their operating lives.

Unanticipated and extended shutdowns of some of these old reactors have resulted in severe Mo-99 supply shortages in the United States and other countries. Some of these shortages have disrupted the delivery of medical care. Molybdenum-99 for Medical Imaging examines the production and utilization of Mo-99 and associated medical isotopes, and provides

recommendations for medical use.
