SAQs, MCQs, EMQs and OSCEs for MRCOG Part 2, Second edition - Justin Konje 2009-03-27

This book established itself in its first edition as the definitive 'one-stop-shop' revision aid; the only one available to encompass all elements of the MRCOG Part 2 examination in a single volume. Now incorporating practice EMQs as well as the standard question types, this second edition will ensure that it retains its place on the 'must-have' list for every candidate preparing for this exam. Concentrating on testing the candidate's theoretical and practical knowledge as recommended in the current MRCOG syllabus, the book tests the trainee with questions in obstetrics and gynaecology and those aspects of medicine, surgery and paediatrics relevant to the practice of both. The book is divided into four key parts, one for each style of question, each of which opens with an introductory section on how to approach the exam and, crucially, how to fail it. # Part 1 provides a series of short answer practice papers.

Common mistakes are highlighted as well as a list of key points required to get full marks. A sample answer is given for each question # Part 2 contains a mock paper for the MCQ part of the exam, containing 225 questions with answers and helpful annotations # Part 3 introduces the EMQ, giving the reader 40 questions in the style of the examination, together with answers and explanatory notes # Part 4 is devoted to the OSCE, with descriptions of 20 sample stations assessing different

aspects of clinical practice, advice on how to tackle these, and suggested marking schemes. Throughout, questions have been designed to test factual knowledge and understanding, problem-solving ability, and clinical and communication skills.

"Correctional nursing has minimal published texts to support, educate, and provide ongoing best practices in this specialty. Schoenly and Knox have successfully met those needs with Essentials of Correctional

Essentials of Correctional Nursing supports correctional nurses by providing a comprehensive body of current, evidence-based knowledge about the best practices to deliver optimal nursing care to this population. It describes how nurses can apply their knowledge and skills to assess the full range of health conditions presented by incarcerated individuals and determine the urgency and priority of requisite care. The book describes the unique health needs and corresponding care for juveniles, women, and individuals at the end of life. Chapters are devoted to nursing care for patients with chronic disease, infectious disease, mental illness, or pain, or who are in withdrawal from drugs or alcohol. Chapters addressing health screening, medical emergencies, sick call, and dental care describe how nurses identify, respond to, and manage these health care concerns in the correctional setting. The Essentials of Correctional Nursing was written and reviewed by experienced correctional nurses with thousands of hours of experience. American Nurses Association standards are woven throughout the text, which provide the information needed by nurses studying for certification exams in correctional nursing. The text will also be of value to nurses working in such settings as emergency departments, specialty clinics, hospitals, psychiatric treatment units, community health clinics, substance abuse treatment programs, and long-term care settings, where they may encounter patients who are currently or have previously been incarcerated.
