Elements of Technology - Jacob Bigelow 1831

**Architecture and Modernity** - Hilde Heynen

2000-02-28

Bridges the gap between the history and theory of twentieth-century architecture and cultural theories of modernity. In this exploration of the relationship between modernity, dwelling, and architecture, Hilde Heynen attempts to bridge the gap between the discourse of the modern movement and cultural theories of modernity. On one hand, she discusses architecture from the perspective of critical theory, and on the other, she modifies positions within critical theory by linking them with architecture. She assesses architecture as a cultural field that structures daily life and that embodies major contradictions inherent in modernity, arguing that architecture nonetheless has a certain capacity to adopt a critical stance vis-à-vis modernity. Besides presenting a theoretical discussion of the relation between architecture, modernity, and dwelling, the book provides architectural students with an introduction to the discourse of critical theory. The subchapters

on Walter Benjamin, Ernst Bloch, Theodor Adorno, and the Venice School (Tafuri, Dal Co, Cacciari) can be studied independently for this purpose.

### **Combinatorics, Automata and Number Theory** - Valérie Berthé 2010-08-12

This series is devoted to significant topics or themes that have wide application in mathematics or mathematical science and for which a detailed development of the abstract theory is less important than a thorough and concrete exploration of the implications and applications. Books in the Encyclopedia of Mathematics and its Applications cover their subjects comprehensively. Less important results may be summarised as exercises at the ends of chapters, For technicalities, readers can be referred to the bibliography, which is expected to be comprehensive. As a result, volumes are encyclopedic references or manageable guides to major subjects.

### **Superintelligence** - Nick Bostrom 2014

**Field-Effect and Bipolar Power Transistor Physics** - Adolph Blicher 2012-12-02

Field-Effect and Bipolar Power Transistor Physics introduces the physics of operation of power transistors. It deals with bipolar devices as well as field-effect power transistors. The

book provides an up-to-date account of the progress made in power transistor design. This volume consists of three parts. Part I examines general considerations and reviews semiconductor surface theory as a background to understanding surface phenomena. It also discusses the effect of high carrier concentration on the semiconductor properties. Part II deals with bipolar transistors and the basic structures of power transistors. Part III discusses junction field-effect and surface field-effect transistors. This book is written for electrical engineers who design power transistor circuits, device physicists and designers, and university students. The reader should have some familiarity with small signal transistor physics as the presentation is at the senior undergraduate or first-year graduate level.

**Is Europe Christian?** - Olivier Roy 2020-03-01  
As Europe wrangles over questions of national identity, nativism and immigration, Olivier Roy interrogates the place of Christianity, foundation

of Western identity. Do secularism and Islam really pose threats to the continent's 'Christian values'? What will be the fate of Christianity in Europe? Rather than repeating the familiar narrative of decline, Roy challenges the significance of secularized Western nations' reduction of Christianity to a purely cultural force- relegated to issues such as abortion, euthanasia and equal marriage. He illustrates that, globally, quite the opposite has occurred: Christianity is now universalized, and detached from national identity. Not only has it taken hold in the Global South, generally in a more socially conservative form than in the West, but it has also 'returned' to Europe, following immigration from former colonies. Despite attempts within Europe to nationalize or even racialize it, Christianity's future is global, non-European and immigrant-as the continent's Churches well know. This short but bracing book confirms Roy's reputation as one of the most acute observers of our times. It represents a

persuasive and novel vision of religion's place in national life today.

**Beyond New Media** - Art Herbig 2014-11-14  
Bringing together rhetorical, media studies, organizational communication, ethnographic, pop culture, mass communication, gender studies, and educational technology backgrounds to bear on polymediation, the authors interrogate the language by which we talk about the contemporary media landscape and the impact of the media on people's lives.

Sleepless Souls - Michael MacDonald 1993  
Sleepless Souls is a social and cultural history of suicide in early modern England. It traces the rise and fall of the crime of self-murder and explores the reasons why suicide came to be harshly punished in the sixteenth century, and why it was gradually decriminalized in the century and a half following the English Revolution. Michael MacDonald and Terence R. Murphy employ a wide range of records from the period between 1500 and 1800 in order to place

suicide in its contemporary context, and relate its history to political events, religious changes, philosophical fashions, tensions between central government and local communities, class interests, and the communication media. The authors treat the crisis of death by suicide as a lens in which the forces that reshaped the mental outlook of different classes and social groups are reflected.

Clitics in Phonology, Morphology and Syntax - Birgit Gerlach 2001-02-01

This book contains fourteen articles that reflect current ideas on the phonology, morphology, and syntax of clitics. It covers the forms and functions of clitics in various typologically diverse languages and presents data from, e.g. European Portuguese, Macedonian, and Yoruba. It extensively deals with the prosodic structure of clitics, their morphological status, clitic placement, and clitic doubling. The form and behavior of clitics with respect to tonal phenomena and in verse are discussed in two

articles (Akinlabi & Liberman, Reindl & Franks). Other articles address the prosodic representation of clitics in Irish (Green), the differences in the acquisition of clitics and strong pronouns in Catalan (Escobar & Gavarro), the similarities between clitics and affixes or words in Romance and Bantu languages (Cocchi, Crysmann, Monachesi, Ortman & Popescu), the semantics of clitics in the Greek DP and in Spanish doubling (Alexiadou & Stavrou, Uriagereka), and complex problems concerning verbal clitics in Romanian and Balkan languages (Legendre, Spencer, Tomic).

*The Precipice* - Toby Ord 2020-03-24

This urgent and eye-opening book makes the case that protecting humanity's future is the central challenge of our time. If all goes well, human history is just beginning. Our species could survive for billions of years - enough time to end disease, poverty, and injustice, and to flourish in ways unimaginable today. But this vast future is at risk. With the advent of nuclear

weapons, humanity entered a new age, where we face existential catastrophes - those from which we could never come back. Since then, these dangers have only multiplied, from climate change to engineered pathogens and artificial intelligence. If we do not act fast to reach a place of safety, it will soon be too late. Drawing on over a decade of research, *The Precipice* explores the cutting-edge science behind the risks we face. It puts them in the context of the greater story of humanity: showing how ending these risks is among the most pressing moral issues of our time. And it points the way forward, to the actions and strategies that can safeguard humanity. An Oxford philosopher committed to putting ideas into action, Toby Ord has advised the US National Intelligence Council, the UK Prime Minister's Office, and the World Bank on the biggest questions facing humanity. In *The Precipice*, he offers a startling reassessment of human history, the future we are failing to protect, and the steps we must take

to ensure that our generation is not the last. "A book that seems made for the present moment."  
—New Yorker

stimulating, people-oriented, profit-maximizing practices -- that made these organizations successful. Joining the HarperBusiness Essentials series, this phenomenal bestseller features a new Authors' Note, and reintroduces these vital principles in an accessible and practical way for today's management reader.

**Human Security** - W.E. Blatz 1966-12-15  
During his lifetime, W.E. Blatz was so much occupied with the development of the University of Toronto's Institute of Child Study that he was able to devote little time to writing. This is his first book to appear in twenty-one years, and his first complete exposition of his famous Theory of Security. The Theory of Security is radically different from the theories promulgated by Freudian psychologists. Whereas Freudian personality theory is based on the notion of "unconscious," an entity that is only indirectly observable, the Theory of Security derives from the observation of the conscious state in all its manifestations. Dr. Blatz thus makes use of both

empirical observations and the results of introspection, and, as might be expected, some of his conclusions run counter to those reached in much current psychological discussion. But proof of the forcible influence of the theory and its author may be found in the impressive number of books and articles already published by Dr. Blatz's associates at the Institute of Child Study, applying the theory to the practical problems of psychological observation and therapy. It is fitting that the man whose work has generated so much fruitful research by others in this field should at last have set down in book form the fundamental principles that guided them.

**Search Methodologies** - Edmund K. Burke  
2013-10-18

The first edition of *Search Methodologies: Introductory Tutorials in Optimization and*

Decision Support Techniques was originally put together to offer a basic introduction to the various search and optimization techniques that students might need to use during their research, and this new edition continues this tradition. Search Methodologies has been expanded and brought completely up to date, including new chapters covering scatter search, GRASP, and very large neighborhood search. The chapter authors are drawn from across Computer Science and Operations Research and include some of the world's leading authorities in their field. The book provides useful guidelines for implementing the methods and frameworks described and offers valuable tutorials to students and researchers in the field. "As I embarked on the pleasant journey of reading through the chapters of this book, I became convinced that this is one of the best sources of introductory material on the search methodologies topic to be found. The book's subtitle, "Introductory Tutorials in Optimization

and Decision Support Techniques", aptly describes its aim, and the editors and contributors to this volume have achieved this aim with remarkable success. The chapters in this book are exemplary in giving useful guidelines for implementing the methods and frameworks described." Fred Glover, Leeds School of Business, University of Colorado Boulder, USA "[The book] aims to present a series of well written tutorials by the leading experts in their fields. Moreover, it does this by covering practically the whole possible range of topics in the discipline. It enables students and practitioners to study and appreciate the beauty and the power of some of the computational search techniques that are able to effectively navigate through search spaces that are sometimes inconceivably large. I am convinced that this second edition will build on the success of the first edition and that it will prove to be just as popular." Technology and Institute of Bioorganic  
Chemistry, Polish Academy of Sciences

**A Theory of Justice** - John RAWLS 2009-06-30

**21 Lessons for the 21st Century** - Yuval Noah  
Harari 2019-01-29

#1 NEW YORK TIMES BESTSELLER • In *Sapiens*, he explored our past. In *Homo Deus*, he looked to our future. Now, one of the most innovative thinkers on the planet turns to the present to make sense of today's most pressing issues. "Fascinating . . . a crucial global conversation about how to take on the problems of the twenty-first century."—Bill Gates, *The New York Times Book Review* NAMED ONE OF THE BEST BOOKS OF THE YEAR BY FINANCIAL TIMES AND PAMELA PAUL, *KQED* How do computers and robots change the meaning of being human? How do we deal with the epidemic of fake news? Are nations and religions still relevant? What should we teach our children? Yuval Noah Harari's *21 Lessons for the 21st Century* is a probing and visionary investigation into today's most urgent issues as we move into the uncharted territory of the future. As technology advances faster than our

understanding of it, hacking becomes a tactic of war, and the world feels more polarized than ever, Harari addresses the challenge of navigating life in the face of constant and disorienting change and raises the important questions we need to ask ourselves in order to survive. In twenty-one accessible chapters that are both provocative and profound, Harari builds on the ideas explored in his previous books, untangling political, technological, social, and existential issues and offering advice on how to prepare for a very different future from the world we now live in: How can we retain freedom of choice when Big Data is watching us? What will the future workforce look like, and how should we ready ourselves for it? How should we deal with the threat of terrorism? Why is liberal democracy in crisis? Harari's unique ability to make sense of where we have come from and where we are going has captured the imaginations of millions of readers. Here he invites us to consider values, meaning, and

personal engagement in a world full of noise and uncertainty. When we are deluged with irrelevant information, clarity is power. Presenting complex contemporary challenges clearly and accessibly, *21 Lessons for the 21st Century* is essential reading. "If there were such a thing as a required instruction manual for politicians and thought leaders, Israeli historian Yuval Noah Harari's *21 Lessons for the 21st Century* would deserve serious consideration. In this collection of provocative essays, Harari . . . tackles a daunting array of issues, endeavoring to answer a persistent question: 'What is happening in the world today, and what is the deep meaning of these events?'"—BookPage (top pick)

**Powers and Prospects** - Noam Chomsky  
2015-09-28

The renowned linguist and political activist offers penetrating reflections on language, human nature, and foreign policy in this essay collection. From linguistics to the Middle East;

foreign affairs to the role of the media; and intellectual responsibility to the situation in East Timor, Noam Chomsky offers a wide-ranging exploration of the issues and ideas that have concerned him most deeply throughout his distinguished career. These essays are drawn from a series of lectures Chomsky gave in Australia in 1995, under the auspices of the East Timor Relief Association. Examining the interplay between language, human nature and foreign policy, *Powers and Prospects* provides a scathing critique of government policy orthodoxy. Moving beyond criticism of the status quo, Chomsky then outlines other paths that can lead to better understanding and more constructive action.

*Web Data Mining* - Bing Liu 2011-06-25

Liu has written a comprehensive text on Web mining, which consists of two parts. The first part covers the data mining and machine learning foundations, where all the essential concepts and algorithms of data mining and

machine learning are presented. The second part covers the key topics of Web mining, where Web crawling, search, social network analysis, structured data extraction, information integration, opinion mining and sentiment analysis, Web usage mining, query log mining, computational advertising, and recommender systems are all treated both in breadth and in depth. His book thus brings all the related concepts and algorithms together to form an authoritative and coherent text. The book offers a rich blend of theory and practice. It is suitable for students, researchers and practitioners interested in Web mining and data mining both as a learning text and as a reference book. Professors can readily use it for classes on data mining, Web mining, and text mining. Additional teaching materials such as lecture slides, datasets, and implemented algorithms are available online.

*The Social Experience* - James Wilfrid Vander Zanden 1988

*Relative Finiteness in Module Theory* - Toma Albu 1984

*Algorithmic Foundations of Robotics XI* - H. Levent Akin 2015-04-30

This carefully edited volume is the outcome of the eleventh edition of the Workshop on Algorithmic Foundations of Robotics (WAFR), which is the premier venue showcasing cutting edge research in algorithmic robotics. The eleventh WAFR, which was held August 3-5, 2014 at Boğaziçi University in Istanbul, Turkey continued this tradition. This volume contains extended versions of the 42 papers presented at WAFR. These contributions highlight the cutting edge research in classical robotics problems (e.g. manipulation, motion, path, multi-robot and kinodynamic planning), geometric and topological computation in robotics as well novel applications such as informative path planning, active sensing and surgical planning. This book - rich by topics and authoritative contributors - is

a unique reference on the current developments and new directions in the field of algorithmic foundations.

**The Utopian Function of Art and Literature** - Ernst Bloch 1989-03-06

Essays in aesthetics by the philosopher Ernst Bloch that belong to the tradition of cultural criticism represented by Georg Lukács, Theodor Adorno, and Walter Benjamin. The aesthetic essays of the philosopher Ernst Bloch (1885–1977) belong to the rich tradition of cultural criticism represented by Georg Lukács, Theodor Adorno, and Walter Benjamin. Bloch was a significant creative source for these thinkers, and his impact is nowhere more evident than in writings on art. Bloch was fascinated with art as a reflection of both social realities and human dreams. Whether he is discussing architecture or detective novels, the theme that drives his work is always the same—the striving for "something better," for a "homeland" that is more socially aware, more

humane, more just. The book opens with an illuminating discussion between Bloch and Adorno on the meaning of utopia; then follow twelve essays written between 1930 and 1973 on topics such as aesthetic theory, genres such as music, painting, theater, film, opera, poetry, and the novel, and perhaps most important, popular culture in the form of fairy tales, detective stories, and dime novels. The MIT Press has previously published Ernst Bloch's *Natural Law and Human Dignity* and his magnum opus, *The Principle of Hope*. The *Utopian Function of Art and Literature* is included in the series *Studies in Contemporary German Social Thought*, edited by Thomas McCarthy.

**The 4th Industrial Revolution** - Mark Skilton 2017-11-28

This book helps decision makers grasp the importance, and applicability to business, of the new technologies and extended connectivity of systems that underlie what is becoming known as the Fourth Industrial Revolution: technologies and systems such as artificial intelligence, machine learning, 3D printing, the internet of

things, virtual and augmented reality, big data and mobile networks. The WEF, OECD and UN all agree that humanity is on the cusp of the Fourth Industrial Revolution. As intelligent systems become integrated into every aspect of our lives this revolution will induce cultural and societal change of a magnitude hitherto unforeseen. These technologies challenge the values, customer experience and business propositions that have been the mainstay of almost every business and organization in existence. By redefining and encapsulating new value structures with emerging intelligent technologies, new innovative models are being created, and brought to market. Understanding

the potential and impact of these changes will be a fundamental leadership requirement over the coming years. Skilton and Hovsepian provide decision makers with practical, independent and authoritative guidance to help them prepare for the changes we are all likely to witness due to the rapid convergence of technological advances. In short, bite-sized, nuggets, with frameworks supported by a deep set of practical and up-to-the-minute case studies, they shine light on the new business models and enterprise architectures emerging as businesses seek to build strategies to thrive within this brave new world.
