Case Studies in Finance - Robert F. Bruner 1994

Real Estate Economics - Nicholas G. Pirounakis 2013

Real Estate Economics: A point-to-point handbook introduces the main tools and concepts of real estate (RE) economics. It covers areas such as the relation between RE and the macro-economy, RE finance, investment appraisal, taxation, demand and supply, development, market dynamics and price bubbles, and price estimation. It balances housing economics with commercial property economics, and pays particular attention to the issue of property dynamics and bubbles – something very topical in the aftermath of the US house-price collapse that precipitated the global crisis of 2008. This textbook takes an international approach and introduces the student to the necessary ‘toolbox’ of models required in order to properly understand the mechanics of real estate. It combines theory, technique, real-life cases, and practical examples, so that in the end the student is able to:

- read and understand most RE papers published in peer-reviewed journals;
- make sense of the RE market (or markets); and
- contribute positively to the preparation of economic analyses of RE assets and markets soon after joining any company or other organization involved in RE investing, appraisal, management, policy, or research.

This book should be particularly useful to third-year students of economics who may take up RE or urban economics as an optional course, to postgraduate economics students who want to specialize in RE economics, to graduates in management, business administration, civil engineering, planning, and law who are interested in RE, as well as to RE practitioners and to students reading for RE-related professional qualifications.

Essentials of Corporate Finance - Stephen Ross 2010-02-19

Essentials of Corporate Finance, 7th edition by Ross, Westerfield, and Jordan is written to convey the most important concepts and principles of corporate finance at a level that is approachable for a wide audience. The authors retain their modern approach to finance, but have distilled the subject down to the essential topics in 18 chapters. They believe that understanding the "why" is just as important, if not more so, than understanding the "how," especially in an introductory course. Three basic themes emerge as their central focus: 1. An emphasis on intuition--separate and explain the principles at work on a common sense, intuitive level before launching into specifics. Underlying ideas are discussed first in general terms, then followed by specific examples that illustrate in more concrete terms how a financial manager might proceed in a given situation. 2. A unified valuation approach--Net Present Value is treated as the basic concept underlying corporate finance. Every subject the authors cover is firmly rooted in valuation, and care is taken to explain how decisions have valuation effects. 3. A managerial focus--Students learn that financial management concerns management. The role of financial manager as decision maker is emphasised and they stress the need for managerial input and judgment.
