Brown Bag Lessons - Don Alexander 2012

Brown Bag Lessons, The Magic of Bullet Writing centers on effective bullet writing and guarantees immediate improvement. Skillful writing doesn't have to be difficult. No other book approaches writing the way this book does, and no other book teaches these techniques. After reading this book, you will fully understand how to write strong bullets and "why" every word matters. In 2003 the author created a seminar to teach a fair and consistent process to evaluate recognition packages. This seminar transformed an entire organization within six months. Since then, the techniques have decisively transformed the writing, recognition, and promotions of every organization applying them. The practices in this book continue to positively impact the Air Force and sister services through professional military education. In addition, the concepts have helped transitioning service members and college students better communicate acquired capabilities and competencies on their résumés. Read on to discover the "magic" and open your eyes to a brand new way to look at writing. The US Air Force promotion system emphasizes the importance of documenting your very best accomplishments. Under this system, promotion comes from the most recent performance reports, so Airmen must communicate the best accomplishments and not just words that fill the white space. This Magic of Bullet Writing will ensure you know how to articulate not just what you are doing but also convey your strongest competencies and capabilities so the promotion board can fully assess your readiness for promotion. Training materials that correspond to the lessons in this book are available for free download at <http://www.brownbaglessons.com>. Are you ready for the magic?

Beyond the Magic Bullet - Raymond Chang 2012-05-17

While scientists win occasional skirmishes in the battle against cancer, the overall war continues to go badly. Stories abound about revolutionary drugs that may be available in the future, but offer no real help to those who have cancer today. At present, conventional approaches continue to rely on a narrowly focused strategy of treatments, with doctors using, at best, only one or two drugs or other therapies at a time. While this may be acceptable in a laboratory setting or a clinical trial, it has done little to diminish the number of people who die each year from this dread disease. Recently, however, conventional medicine's core strategy has been re-examined, and a new, potentially more effective approach has emerged—one that combines the best of Eastern wisdom with Western science. *Beyond the Magic Bullet—The Anti-Cancer Cocktail* by Dr. Raymond Chang takes a penetrating look at this bold new way of treating cancer. The book begins by examining modern medicine's use of surgery, radiation, chemotherapy, hormone therapy, and targeted drugs in the war against cancer. It then offers a new therapy based on the knowledge that certain off-label drugs, nutrients, and therapies are each somewhat effective against cancer. By combining these therapeutic agents into a "cocktail," doctors have found that they can attack the cancer all at once, on many different levels and at several different angles, with the goal of overwhelming the disease. Dr. Chang not only discusses the effectiveness of the cocktail, but also provides an examination of the most valuable agents available. For over a thousand years, Traditional Chinese Medicine has used the cocktail approach to safely and effectively fight disease. Throughout the world, the most successful treatments for HIV and Hepatitis C are based on this strategy. *Beyond the Magic Bullet—The Anti-Cancer Cocktail* leads the way to a bright new future of hope and healing.

Combat - William Peter Grasso 2020

"Die For a Tie: As the Korean War devolves to a bloody stalemate in 1951, that's what GIs feel their leaders in Washington are asking of them. After winter offensives prove catastrophic to both sides, American commanders resort to magic bullets—unconventional weapons, tactics, and units, like Brigadier General Jock Miles' regimental combat team—to stem the relentless Chinese human wave attacks at battles like Bloody Ridge and Heartbreak Ridge. As the war's main battlefield becomes a conference table in Panmunjom, Jock and his men grapple with an uncertain future as they fight a war they cannot win but must not lose."-- Amazon.com

The Hundred-Year Lie - Randall Fitzgerald 2007-06-26

In a devastating exposé in the tradition of *Silent Spring* and *Fast Food Nation*, investigative journalist Randall Fitzgerald warns how thousands of man-made chemicals in our food, water, medicine, and environment are making humans the most polluted species on the planet. A century ago, when Congress enacted the Pure Food and Drug Act, Americans were promised "better living through chemistry." Fitzgerald provides overwhelming evidence to shatter this myth, and many others perpetrated by the chemical, pharmaceutical, and processed foods industries. Consider this: · The average American carries a "body burden" of 700 synthetic chemicals; · Chemicals in tap water can cause reproductive abnormalities and hermaphroditic birth; · One study of lactating women found perchlorate (a toxic component of rocket fuel) in practically every mother's breast milk. In the face of this national health crisis, Fitzgerald presents informed and practical suggestions for what we can do to turn the tide and live healthier lives.

Medical Nihilism - Jacob Stegenga 2018-03-08

This book argues that if we consider the ubiquity of small effect sizes in medicine, the extent of misleading evidence in medical research, the thin theoretical basis of many interventions, and the malleability of empirical methods, and if we employ our best inductive framework, then our confidence in medical interventions ought to be low.

Magic Bullets - Savoy 2009

Miracle Cure - William Rosen 2017-05-09

The epic history of how antibiotics were born, saving millions of lives and creating a vast new industry known as Big Pharma. As late as the 1930s, virtually no drug intended for sickness did any good; doctors could set bones, deliver babies, and offer palliative care. That all changed in less than a generation with the discovery and development of a new category of medicine known as antibiotics. By 1955, the age-old evolutionary relationship between humans and microbes had been transformed, trivializing once-deadly infections. William Rosen captures this revolution with all its false starts, lucky surprises, and eccentric characters. He explains why, given the complex nature of bacteria—and their ability to rapidly evolve into new forms—the only way to locate and test potential antibiotic strains is by large-scale, systematic, trial-and-error experimentation. Organizing that research needs large, well-funded organizations and businesses, and so our entire scientific-industrial complex, built around the pharmaceutical company, was born. Timely, engrossing, and eye-opening, *Miracle Cure* is a must-read science narrative—a drama of enormous range, combining science, technology, politics, and economics to illuminate the reasons behind one of the most dramatic changes in humanity's relationship with nature since the invention of agriculture ten thousand years ago.

Searching for Magic Bullets - Lisa A Basara 1994-08-10

Searching for Magic Bullets reveals the quest of consumers, health professionals, and drug developers to find safer and faster methods of bringing new medications to the marketplace. Authors Basara and Montagne explore the current drug development and approval processes,

their strengths and weaknesses, and the mechanisms by which patients and organizations evade these processes. Readers learn about the fundamentals of traditional and nontraditional drug discovery and development as they occur in the U.S., as well as the views of consumers, patients, and health professionals. Specific case studies of non-traditional drug development and acquisition strategies are highlighted, including AIDS medications, orphan drugs, and patient importation of medications. Basara and Montagne establish the differences in both knowledge and opinions of health consumers and health professionals regarding drug development, as well as how these differences often lead to frustration, dissatisfaction, and misappropriation of resources. The authors pinpoint the need for consumers and patients to know much more about the discovery and development of medicines, and for health professionals and students to understand patients' concerns, needs and beliefs, including their reasons for considering alternative methods of drug development and acquisition. Searching for Magic Bullets is a springboard from which consumers, health professionals, and students can discuss, debate, and resolve these issues and begin to develop more capable drug development and approval systems. This groundbreaking new book enlightens health professionals about patients' views regarding medication discovery and development and informs consumers and patients about the sometimes conflicting views of health professionals. It is divided into three sections: drug development and approval in the U.S., a case study of orphan drugs, and risky and sometimes illegal ways in which consumers evade the traditional drug development and approval systems. An Overview of the Chapters: A Review of the Drug Development Process of the Pharmaceutical Industry: Presents the steps that must be taken when researching and developing a new medication. The Food and Drug Administration and the Drug Approval Process: Describes the history and scope of the FDA, the steps involved in acquiring drug approval, and the various stages of clinical testing. Orphan Drug Legislation: A review of the Orphan Drug Act of 1983 and the changes that have recently been proposed by Congress. The impact of the Act is highlighted through a description of products that have been made available since the legislation was enacted. Issues of controversy are also highlighted. Non-traditional Methods of Drug Development: The role of patients and consumers in drug development and evaluation is discussed, with an emphasis on the perceived shortcomings of the formal system. Patient Influence on Drug Development and Regulation: The influence of patient advocacy groups and consumers is discussed in relation to the development and approval of orphan drugs, the fast-tracking of specific medications, and the use of unapproved and alternative therapies. Prescription Drug Importation: Clarifies the current drug importation regulations, as well as provides specific directions for patients wishing to receive such products or learn more about FDA importation laws. The final chapter summarizes safe and rational techniques that empower consumers in their search for beneficial drug therapies. Resources and strategies for obtaining and using information are provided as a reference for readers. A glossary of terms, acronyms, and a directory of supplemental information sources strengthens the reader's understanding of the information presented. Who Benefits From This Book? Consumers and patients can use Searching for Magic Bullets as an accurate source of information about significant but often confusing medical issues. The FDA and the way medications are developed are easily misunderstood, while alternative therapies and medication sources are often believed to be the only options. Patients will learn the viewpoints of the pharmaceutical industry, the government, and their health care professionals; the rationale for various steps in the drug development process; the risks and benefits of participation in clinical trials; how to obtain the highest quality care, make informed health decisions, and reduce health care costs; and finally, how to cope with a rare disease and/or limited access to approved medications. The result is an informed, influential, and active patient. For health professionals, this book reviews the steps of drug development and approval and provides explanations for drug development decisions; drug approval time lag; and patient frustrations, misinterpretations, and expectations. It is critical for health professionals to understand the needs of patients and to determine how they can work with patients to find acceptable solutions. The literature references and medical information sources are invaluable in this regard. Pharmaceutical industry executives, product managers, clinical researchers, and sales representatives will find a concise and timely examination of the ways in which medications are discovered, developed, marketed, and used by patients. Discussions of orphan drug development, biotechnology products, and patient issues may also

provide new insights into these often misunderstood areas. Pharmacy, medical, nursing, and other students will find this book a consolidated reference source and guidebook for information about the primary issues surrounding drug development and the FDA approval process. Patients' knowledge of alternative medical therapies will only increase and health care curricula must include material that helps students understand patients' perceptions of the medication development and approval systems, as well as the importance of patients in health care decisionmaking. The disadvantages of current drug development and approval systems are described with the hope that future health professionals can amend these processes and ultimately enhance patient care.

Magic Bullets in Real Estate - Dan Auito 2005

If you want to make it in the real estate business without reading dozens of books, spending endless hours in classes, and dropping bundles on unwise investments, look no further than *Magic Bullets in Real Estate*. Information-packed, this book reveals proven secret strategies in a unique, reality-based approach. This invaluable resource shows how every person can live a life of prosperity and security. It details a concrete plan to find, negotiate, contract, buy, sell, rehabilitate, and flip properties - as well as manage tenants, taxes, and trades people.

The Lost Art of General Management - Rob Waite 2004

General management is a lost art. The ability to take a balanced perspective on business has been overlooked, maligned and bred out of the species of modern managers. *The Lost Art of General Management* will guide the reader on a journey of discovery of the skills of a general manager. Most importantly, the reader will be given practical advice on how to apply those skills. ABOUT THE AUTHOR: Rob Waite is a senior executive with over 20 years of leadership experience in domestic and international business. His successes include start-ups, turnarounds, multinational strategic partnerships and global business expansions with Fortune 500 companies and worldwide industrial leaders.

No Magic Bullet - Allan M. Brandt 2020-07-13

From Victorian anxieties about syphilis to the current hysteria over herpes and AIDS, the history of venereal disease in America forces us to examine social attitudes as well as purely medical concerns. In *No Magic Bullet*, Allan M. Brandt recounts the various medical, military, and public health responses that have arisen over the years--a broad spectrum that ranges from the incarceration of prostitutes during World War I to the establishment of required premarital blood tests. Brandt demonstrates that Americans' concerns about venereal disease have centered around a set of social and cultural values related to sexuality, gender, ethnicity, and class. At the heart of our efforts to combat these infections, he argues, has been the tendency to view venereal disease as both a punishment for sexual misconduct and an index of social decay. This tension between medical and moral approaches has significantly impeded efforts to develop "magic bullets"--drugs that would rid us of the disease--as well as effective policies for controlling the infections' spread. In this 35th anniversary edition of *No Magic Bullet*, Brandt reflects on recent scholarship, the persistence of sexually transmitted diseases, and the trajectory of the HIV epidemic, as they have informed contemporary conceptions of biomedicine and global health.

Magic Bullets - Grant Fjermedal 1984

Presenting the latest advances in cancer research, a respected medical journalist examines the development and therapeutic applications of monoclonal and polyclonal antibodies--which can precisely seek out and destroy cancer cells while ignoring normal ce

Doctor Strange/Punisher: Magic Bullets - Marvel Worldwide, Incorporated 2017-09-12

The Master of the Mystic Arts and the One-Man War on Crime unite their unique talents in the strangest team-up in comics! Because, when mafia demons strike, it'll take the combined skills of Doctor Strange and the Punisher to stop them! But does this mean that Stephen Strange is about to adopt Frank Castle's lethal ways? Or will the Punisher be learning some new tricks? The Sorcerer Supreme must work on being a little more grounded, while Frank has to expand his worldview in surprising new directions. But with monstrous mobsters on the rampage, this mismatched pair has their work cut out for them! The very different worlds of two of Marvel's most individual characters collide, and the fate of New York is at stake! COLLECTING: DOCTOR STRANGE/PUNISHER: MAGIC BULLETS 1-4

Magic Cancer Bullet - Daniel Vasella, M.D. 2003-06-03

Discusses the development and potential of the cancer drug Gleevec, tracing its laboratory successes, the efforts to acquire the drug's FDA approval, and the stories of patients with cancer whose lives have been

positively impacted.

Snake Pits, Talking Cures & Magic Bullets - Deborah Kent
2003-01-01

Looks at how the mentally ill have been treated throughout history, focusing on advances made in the 19th and 20th centuries regarding mental hospitals, medications, and social acceptance.

The Magic Bullet Cookbook - June C. Despain 2004-08

If you always follow the voice of your conscience, are you on safe ground? Do some people at least sometimes have motives of the highest and noblest kind, which ever perhaps existed? Do some people at least sometimes try to be the best person they could and ought to know how to be? On the other side of the grave, is it possible most people will find hell is their preferred destination? If so, why?! How could a truly loving God allow either that a hell should exist or that some people should prefer its eternal torment to the eternal bliss of heaven? Do all of us, as children, "picture" God as the kind of father who comes after you when you do something bad? What is the nature of individuality? Which should one concentrate on the most: not giving offense or not taking offense? What about motives so hidden we ourselves who have them are not aware of either their nature or their presence in us?! Why do some people find it impossible to believe in a God but easy to believe that they themselves are gods from the standpoint of their behavior's merits? Does agnosticism rest on an intellectually sound basis? How does Christianity affect our failure to be the best people we could and ought to be? Is love ever totally unconditional? Which is more important: to avoid hurting other people's feelings or to enlighten them? Those are the kinds of questions considered in the pages of this book. But, why should one be interested in what this book has to say on such issues? I'm quite sure I myself cannot give anyone a truly compelling reason to do so. At best, I can only say this: The answers given herein have done wonders for me. Though, at 64 years of age, I am as alone, lonely, and rejected as anyone I have ever met. (As a child, my parents repeatedly assured me I was nothing to them but the hell they had to endure on Earth in order to escape the hell hereafter. Despite 50 years of heroic effort to keep The Ten Commandments, I'm still so immersed in mortal sin, it strongly suggests that even God totally rejects me; and, though I've written dozens of books and pamphlets, not a one of them has ever drawn anything from book publishers and agents save a myriad of rejections lips...thus forcing me to publish on my own.). The answers in this book leave me at all times as high-spirited, enthusiastic, euphoric, and confident of the future as is anyone else I have ever met. It is no small achievement, to say the very least. May God grant these thoughts do half as much for you.

Magic Bullets to Conquer Malaria - Irwin W. Sherman 2011

Chronicles the search for and use of medicines to conquer malaria, one of the world's most devastating and debilitating infectious diseases: • Examines drug treatments past and present; how they came in to being and how they have been used or abused • Examines how the drugs act and how the parasite is able to fight back • Focuses on understanding the problem of drug resistance and how its effects can be thwarted

Immunoglobulins, Magic Bullets and Therapeutic Antibodies - Manzoor Ahmad Mir 2020-02-19

The book "Immunoglobulins, Magic Bullets and Therapeutic Antibodies" comprises of ten chapters and it describes the origin, history, timeline, production and scope of immunoglobulins which are the central molecules of the immune system around which the field of immunology revolves. This book describes how the immune system responds to injuries and insults by foreign antigens (bacteria, viruses etc) and produces immunoglobulins, which then through various immune response mechanisms protect the body against pathogenic invasions. Further, it discusses how these antigens are involved in the differentiation and maturation of immune cells, how lymph nodes are involved in concentrating the antigens, how immunogenicity of an antigen is affected and how antigenicity of immunogens is related to the immune response. Classification of immunoglobulins and the organization and expression of immunoglobulin genes is described separately. The antigen antibody interactions and antibody dependent cell mediated cytotoxicity are also discussed in separate chapters. The magic bullets or monoclonal antibodies, which have revolutionized the field of immunology, are described in greater detail, their production by hybridoma technology and the important role played by these antibodies in research, diagnostics and therapeutics is also discussed in the book. Lastly the immunodiagnostic techniques like radioimmunoassay (RIA), Enzyme Linked Immunosorbent Assay (ELISA), flowcytometry and their importance in the detection of various kinds of diseases like cancer, HIV-

AIDS, tuberculosis, malaria, etc. are discussed in detail as well in the book. The book contains a large number of flow charts, diagrams, depictions and tables highlighting the properties, characteristic features, functions and roles played by these immunoglobulins in various fields of biosciences.

Bio-management of Postharvest Diseases and Mycotoxigenic Fungi - Neeta Sharma 2020-09-01

There is an ever-increasing demand for more food but one of the stumbling blocks to achieving this goal is quality and quantity losses due to various pests and pathogens and the mycotoxins synthesized by these harmful biotic entities. Thus far, strategies employed to manage these post-harvest diseases and mycotoxins decontamination include established physical, cultural, and chemical methods. Recently, the application of chemicals to reduce decay and deterioration caused by various pathogens has been impeded as these hazardous chemicals contaminate the environment, enter the food chain, and destroy beneficial microorganisms and pests by aiming at non-target microorganisms. In light of this, the usage of eco-friendly and non-polluting alternatives to chemical pesticides is the call of the hour. Bio-management of Postharvest Diseases and Mycotoxigenic Fungi deals with the current state and future prospects of using various bio-management techniques that are natural, eco-friendly, and environmentally safe. It aims to increase awareness of their potential as well as sensitizing readers to the various aspects of biologicals in pest control. Key Features: Highlights classical versus new techniques adopted to manage postharvest diseases Discusses novel approaches in managing fungal spoilage and mycotoxin decontamination Provides readers with a 360-degree perspective of the pre- and post-harvest quality mycotoxin decontamination research being conducted Details proposals of new ideas to ensure a food secure and pesticide-free world This book disseminates notable and diversified scientific work carried out by leading experts in their own field. Written by qualified scientists in each of their respective disciplines, it can serve as a current and comprehensive treatise on the emerging field of bio-management of postharvest diseases and mycotoxin decontamination by products that are "generally regarded as safe."

The Lock and Key of Medicine - Lara V. Marks 2015-06-28

This book is the first to tell the extraordinary yet unheralded history of monoclonal antibodies. Often referred to as Mabs, they are unfamiliar to most nonscientists, yet these microscopic protein molecules are everywhere, quietly shaping our lives and healthcare. Discovered in the mid-1970s in the laboratory where Watson and Crick had earlier unveiled the structure of DNA, Mabs have radically changed understandings of the pathways of disease. They have enabled faster, cheaper, and more accurate clinical diagnostic testing on a vast scale. And they have played a fundamental role in pharmaceutical innovation, leading to such developments as recombinant interferon and insulin, and personalized drug therapies such as Herceptin. Today Mabs constitute six of the world's top ten blockbuster drugs and make up a third of new introduced treatments. Lara V. Marks recounts the risks and opposition that a daring handful of individuals faced while discovering and developing Mabs, and she addresses the related scientific, medical, technological, business, and social challenges that arose. She offers a saga of entrepreneurs whose persistence and creativity ultimately changed the healthcare landscape and brought untold relief to millions of patients. Even so, as Marks shows, controversies over Mabs remain, and she examines current debates over the costs and effectiveness of these innovative drugs.

Magic Bullets - Jessyca Elayne Allyn 2011-02-01

Magic Bullets are inspirations that can transform the lives of those who are ready, willing, and able to shift gears. The purpose of this book is to inspire its readers to think and act in happier and healthier ways than they previously have. Some may find this book absolutely enlightening.

Those who are already enlightened may find that this book confirms and enhances their experience.

Magic Bullets, Lost Horizons - Sebastian G. B. Amyes 2001-09-13

From the day that Paul Ehrlich hailed his newly discovered treatment for syphilis as the magic bullet, antibiotics have transformed medical practice. They are considered one of the miracle drugs of the 20th century. However, the massive and increasing misuse of these agents is More...causing a problem of resistance that may prove to be one of the greatest threats to health in the 21st century. *Magic Bullets, Lost Horizons* aims to put some of the media sensationalism into perspective. It examines not only the development of modern antibiotics but also the obstacles faced during application of the drugs and their expected efficacy in the future.

Antibody-Drug Conjugates - Jeffrey Wang 2015-03-05

This authoritative volume provides a holistic picture of antibody-drug conjugates (ADCs). Fourteen comprehensive chapters are divided into six sections including an introduction to ADCs, the ADC construct, development issues, landscape, IP and pharmacoeconomics, case studies, and the future of the field. The book examines everything from the selection of the antibody, the drug, and the linker to a discussion of developmental issues such as formulations, bio-analysis, pharmacokinetic-pharmacodynamic relationships, and toxicological and regulatory challenges. It also explores pharmacoeconomics and intellectual properties, including recently issued patents and the cost analysis of drug therapy. Case studies are presented for the three ADCs that have received FDA approval: gemtuzumab ozogamicin (Mylotarg®), Brentuximab vedotin (Adcetris®), and ado-trastuzumab emtansine (Kadcyla®), as well as an ADC in late-stage clinical trials, glembatumumab vedotin (CDX-011). Finally, the volume presents a perspective by the editors on the future directions of ADC development and clinical applications. *Antibody-Drug Conjugates* is a practical and systematic resource for scientists, professors, and students interested in expanding their knowledge of cutting-edge research in this exciting field.

Don't Eat This Book - Morgan Spurlock 2006-05-02

For thirty days, Morgan Spurlock ate nothing but McDonald's as part of

an investigation into the effects of fast food on American health. The resulting documentary earned him an Academy Award nomination and broke box-office records worldwide. But there's more to the story, and in *Don't Eat This Book*, Spurlock examines everything from school lunch programs and the marketing of fast food to the decline of physical education. He looks at why fast food is so tasty, cheap, and ultimately seductive—and interviews experts from surgeons general and kids to marketing gurus and lawmakers, who share their research and opinions on what we can do to offset a health crisis of supersized proportions. *Don't eat this groundbreaking, hilarious book—but if you care about your country's health, your children's, and your own, you better read it.*

The Pickup Artist - Mystery 2010

The creator of the "Mystery Method" introduced in Neil Strauss's best-selling *The Game* imparts salacious techniques for picking up and seducing women, in a guide that also shares extreme stories from Mystery's life. TV tie-in.

No Magic Bullet - Allan M. Brandt 1983

Magic Bullets to Conquer Malaria - Irwin W. Sherman 2013-11

A clear, concise discourse of 300 years of malarial drug research. Serves as a resource for microbiologists, parasitologists, pharmacologists, medicinal chemists, biochemists, physicians, and drug researchers.

Anatomy of an Epidemic - Robert Whitaker 2011-08-02

Updated with bonus material, including a new foreword and afterword with new research, this New York Times bestseller is essential reading for a time when mental health is constantly in the news. In this astonishing and startling book, award-winning science and history writer Robert Whitaker investigates a medical mystery: Why has the number of disabled mentally ill in the United States tripled over the past two decades? Interwoven with Whitaker's groundbreaking analysis of the merits of psychiatric medications are the personal stories of children and adults swept up in this epidemic. As *Anatomy of an Epidemic* reveals, other societies have begun to alter their use of psychiatric medications and are now reporting much improved outcomes . . . so why can't such change happen here in the United States? Why have the results from these long-term studies—all of which point to the same startling conclusion—been kept from the public? Our nation has been hit by an epidemic of disabling mental illness, and yet, as *Anatomy of an Epidemic* reveals, the medical blueprints for curbing that epidemic have already been drawn up. Praise for *Anatomy of an Epidemic* "The timing of Robert Whitaker's *Anatomy of an Epidemic*, a comprehensive and highly readable history of psychiatry in the United States, couldn't be better."—Salon "Anatomy of an Epidemic offers some answers, charting controversial ground with mystery-novel pacing."—TIME "Lucid, pointed and important, *Anatomy of an Epidemic* should be required reading for anyone considering extended use of psychiatric medicine. Whitaker is at the height of his powers." —Greg Critser, author of *Generation Rx*

Fostering Changes - Richard J. Delaney 2006-01-01

This book outlines a hopeful course of treatment for "Fostering Changes" with its optimistic, yet realistic, guidelines for intervention with disturbed foster children.

Food, Genetic Engineering and Philosophy of Technology - N. Dane Scott 2018-10-22

This book describes specific, well-know controversies in the genetic modification debate and connects them to deeper philosophical issues in philosophy of technology. It contributes to the current, far-reaching deliberations about the future of food, agriculture and society.

Controversies over so-called Genetically Modified Organisms (GMOs) regularly appear in the press. The biotechnology debate has settled into a long-term philosophical dispute. The discussion goes much deeper than the initial empirical questions about whether or not GM food and crops are safe for human consumption or pose environmental harms that dominated news reports. In fact, the implications of this debate extend beyond the sphere of food and agriculture to encompass the general role of science and technology in society. The GM controversy provides an occasion to explore important issues in philosophy of technology. Researchers, teachers and students interested in agricultural biotechnology, philosophy of technology and the future of food and agriculture will find this exploration timely and thought provoking.

New Tools to Interrogate Endocannabinoid Signalling - Mauro Maccarrone 2020-11-13

Legalization of cannabis extracts around the world has led to a resurgence of interest into research surrounding endocannabinoids (eCBs) and the endocannabinoid system. This system is formed of a complex array of receptors, metabolic enzymes and transporters that

finely tune the manifold biological activities of eCBs and there is an urgent need for the development of selective drugs to dissect the contribution of eCBs to the aetiology of various diseases. *New Tools to Interrogate Endocannabinoid Signalling* comprehensively covers the innovative research into both natural and synthetic compounds that affect this pathway and taking a target-based approach, assesses their potential for therapeutic use. With contributions from global leaders in the field, this timely volume will be a valuable resource to pharmaceutical researchers and medicinal chemists working in natural products and endocannabinoid drug discovery in academia and industry.

The book "Immunoglobulins, Magic Bullets and Therapeutic Antibodies" comprises of ten chapters and it describes the origin, history, timeline, production and scope of immunoglobulins which are the central molecules of the immune system around which the field of immunology revolves. This book describes how the immune system responds to injuries and insults by foreign antigens (bacteria, viruses etc) and produces immunoglobulins, which then through various immune response mechanisms protect the body against pathogenic invasions.

Further, it discusses how these antigens are involved in the differentiation and maturation of immune cells, how lymph nodes are involved in concentrating the antigens, how immunogenicity of an antigen is affected and how antigenicity of immunogens is related to the immune response. Classification of immunoglobulins and the organization and expression of immunoglobulin genes is described separately. The antigen antibody interactions and antibody dependent cell mediated cytotoxicity are also discussed in separate chapters. The magic bullets or monoclonal antibodies, which have revolutionized the field of immunology, are described in greater detail, their production by hybridoma technology and the important role played by these antibodies in research, diagnostics and therapeutics is also discussed in the book. Lastly the immunodiagnostic techniques like radioimmunoassay (RIA), Enzyme Linked Immunosorbent Assay (ELISA), flowcytometry and their importance in the detection of various kinds of diseases like cancer, HIV-AIDS, tuberculosis, malaria, etc. are discussed in detail as well in the book. The book contains a large number of flow charts, diagrams, depictions and tables highlighting the properties, characteristic features, functions and roles played by these immunoglobulins in various fields of biosciences.
