Transcultural Encounters between Germany and India - Joanne Miyang Cho 2013-12-17

Providing a comprehensive survey of cutting edge scholarship in the field of German--Indian and South Asian Studies, the book looks at the history of German--Indian relations in the spheres of culture, politics, and intellectual life. Combining transnational, post-colonial, and comparative approaches, it includes the entire twentieth century, from the First World War and Weimar Republic to the Third Reich and Cold War era. The book first examines the ways in which nineteenth-century "Indomania" figured in the creation of both German national identity and modern German scholarship on the Orient, and it illustrates how German encounters with India in the Imperial era alternately destabilized and reinforced the orientalist, capitalist, and nationalist underpinnings of German modernity. Contributors discuss the full range of German responses to India, and South Asian perceptions of Germany against the backdrop of war and socio-political revolution, as well as the Third Reich's ambivalent perceptions of India in the context of racism, religion, and occultism. The book concludes by exploring German--Indian relations in the era of decolonization and the Cold War. Employing a diverse array of interdisciplinary approaches to understanding German--Indian encounters over the past two centuries, this book is of interest to students and scholars of Germany, India, Europe, and Asia, as well as history, political science, anthropology, philosophy, comparative literature, and religious studies.

Signs for Developing Reading - Emil Holmer 2016-05-23

Reading development is supported by strong language skills, not least in deaf and hard-of-hearing (DHH) children. The work in the present thesis investigates reading development in DHH children who use sign language, attend Regional Special Needs Schools (RSNS) in Sweden and are learning to read. The primary aim of the present work was to investigate whether the reading skills of these children can be improved via computerized sign language based literacy training. Another aim was to investigate concurrent and longitudinal associations between skills in reading, sign language, and cognition in this population. The results suggest that sign language based literacy training may support development of word reading. In addition, awareness and manipulation of the sub-lexical structure of sign language seem to assist word reading, and imitation of familiar signs (i.e., vocabulary) may be associated with developing reading comprehension. The associations revealed between sign language skills and reading development support the notion that sign language skills provide a foundation for emerging reading skills in DHH signing children. In addition, the results also suggest that working memory and Theory of Mind (ToM) are related to reading comprehension in this population. Furthermore, the results indicate that sign language experience enhances the establishment of representations of manual gestures, and that progression in ToM seems to be typical, although delayed, in RSNS pupils. Working memory has a central role in integrating environmental stimuli and language-mediated representations, and thereby provides a platform for cross-modal language processing and multimodal language development.

1000 Solved Problems in Modern Physics - Ahmad A. Kamal 2010-06-23

This book is targeted mainly to the undergraduate students of USA, UK and other European countries, and the M. Sc of Asian countries, but will be found useful for the graduate students, Graduate Record Examination (GRE), Teachers and Tutors. This is a by-product of lectures given at the

Osmania University, University of Ottawa and University of Tebrez over several years, and is intended to assist the students in their assignments and examinations. The book covers a wide spectrum of disciplines in Modern Physics, and is mainly based on the actual examination papers of UK and the Indian Universities. The selected problems display a large variety and conform to syllabi which are currently being used in various countries. The book is divided into ten chapters. Each chapter begins with basic concepts containing a set of formulae and explanatory notes for quick reference, followed by a number of problems and their detailed solutions. The problems are judiciously selected and are arranged section-wise. The solutions are neither pedantic nor terse. The approach is straight forward and step-- step solutions are elaborately provided. More importantly the relevant formulas used for solving the problems can be located in the beginning of each chapter. There are approximately 150 line diagrams for illustration. Basic quantum mechanics, elementary calculus, vector calculus and Algebra are the pre-requisites.

Assessing Writing - Sara Cushing Weigle 2002-05-27

The assessment of language learners is having a growing impact in English language teaching and applied linguistics. A formal evaluation of students writing abilities is important for language teachers in order to assess the pedagogical needs of their students. While there has been a considerable body of work undertaken on assessing the writing abilities of native speakers, the issues surrounding the assessment of second language learners writing abilities are still emerging. At present, no one volume has explored these issues and their implications for language teaching practitioners wishing to evaluate their students writing. This book outlines in an accessible manner the major tenets of research in the field and provide language teachers with guidelines to design and develop suitable writing assessment tasks for their students.

Edible Insects - Arnold van Huis 2013

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

Understanding Second Language Acquisition - Lourdes Ortega 2014-02-04

Whether we grow up with one, two, or several languages during our early years of life, many of us will learn a second, foreign, or heritage language in later years. The field of Second language acquisition (SLA, for short) investigates the human capacity to learn additional languages in late childhood, adolescence, or adulthood, after the first language --in the case of monolinguals-- or languages --in the case of bilinguals-- have already been acquired. Understanding Second Language Acquisition offers a wide-encompassing survey of this burgeoning field, its accumulated findings and proposed theories, its developed research paradigms, and its pending questions for the future. The book zooms in and out of universal, individual, and social forces, in each case evaluating the research findings that have been generated across diverse naturalistic and formal contexts for second language acquisition. It assumes no background in SLA and provides helpful chapter-by-chapter summaries and suggestions for further reading. Ideal as a textbook for students of applied linguistics, foreign language education, TESOL, and education, it is also recommended for students of linguistics, developmental psycholinguistics, psychology, and cognitive science. Supporting resources for tutors are available free at www.routledge.com/ortega.

European Investment in Greece in the Nineteenth Century - Korinna Schönhärl 2020-09-23

Banking historiography often does not sufficiently take into account bankers' deliberations of their decision making, but rather limits investigation to considerations of profit maximisation. This book shows that the decision-making processes of nineteenth-century bankers contemplating high-risk financial markets like Greece are just as complex as present-day investment decisions. The book, now published in English after a first German edition, offers in-depth studies of decision making in concrete historical situations, considering political and economic circumstances and also the individual background of the actors concerned, including a reflection on the influence of cultural movements such as Philhellenism. Employing methodological inspirations from the field of behavioural finance, the book analyses a broad range of published and unpublished English, French, Greek, German and Swiss sources on European investment in Greece between 1821 and the Balkan wars. Additionally, rich insights into Greek economic history, the economic integration of the country into Europe and long-lasting European stereotypes of Southern Europe and Greece are provided; this furthers understanding of the historical background of the Greek financial crisis after 2009. In combining the perspectives of financial, economic, political and cultural history, this book is primarily significant for students of various fields of historiography. Due to its strong awareness of methodological questions, it is also of great interest to academic historians. In addition, the strong public interest in the Greek financial crisis after 2009 and its consequences for Europe will, thirdly, attract the interest of a broader public.

Curriculum Reform in the European Schools - Sandra Leaton Gray 2018-05-29

This book is open access under a CC BY 4.0 license. This open access book examines the modern role of the European School system within the European Union, at a time when the global economy demands a new vision for contemporary education. The European schools are currently in a state of crisis: their 60-year-old tradition of bilingual and multilingual education is being strained by rapid EU expansion and the removal of English speaking teachers as a result of Brexit. Their tried and tested model of mathematics and science education has rapidly been overtaken by new developments in pedagogy and assessment research, while recruitment and retention of students and teachers has become increasingly fraught as European member states review what they are, and what they are not, prepared to fund. The authors draw on original and empirical research to assess the European Schools' place in a new

Europe where the entire post-war European Project is potentially at risk. This well-researched volume will be of interest to practitioners working in European schools as well as students and scholars of EU politics and international education.

Materials and Processes - Barrie D. Dunn 2015-12-29

The objective of this book is to assist scientists and engineers select the ideal material or manufacturing process for particular applications; these could cover a wide range of fields, from light-weight structures to electronic hardware. The book will help in problem solving as it also presents more than 100 case studies and failure investigations from the space sector that can, by analogy, be applied to other industries. Difficult-to-find material data is included for reference. The sciences of metallic (primarily) and organic materials presented throughout the book demonstrate how they can be applied as an integral part of spacecraft product assurance schemes, which involve quality, material and processes evaluations, and the selection of mechanical and component parts. In this successor edition, which has been revised and updated, engineering problems associated with critical spacecraft hardware and the space environment are highlighted by over 500 illustrations including micrographs and fractographs. Space hardware captured by astronauts and returned to Earth from long durations in space are examined. Information detailed in the Handbook is applicable to general terrestrial applications including consumer electronics as well as high reliability systems associated with aeronautics, medical equipment and ground transportation. This Handbook is also directed to those involved in maximizing the reliability of new materials and processes for space technology and space engineering. It will be invaluable to engineers concerned with the construction of advanced structures or mechanical and electronic sub-systems.

Training-induced cognitive and neural plasticity - Julia Karbach 2013-07-08

Throughout the entire lifespan, individuals are required to adapt to the demands of changing developmental contexts and dynamic social environments. The potential modifiability of a person's cognitive and neural processes has been referred to as plasticity. One way to assess cognitive and neural plasticity is to apply training interventions and to measure the related changes in trained and untrained situations. Over the last decade, the literature on the effects of cognitive interventions has been growing rapidly, oftentimes focusing on the magnitude, scope, and maintenance of training-related benefits and their transferability to untrained tasks and abilities. Recent studies show that plasticity is present across the lifespan, although it seems to decline in older age, and that the long-term maintenance as well as the transferability of training gains strongly depends on the type and the intensity of the intervention. The findings from behavioral cognitive training research have also been accompanied by findings from cognitive neuroscience. The related observations oftentimes point to training-induced changes in a number of cortical and subcortical regions, which may be responsible for the magnitude of training and of transfer effects. Thus, cognitive training may be a promising tool for understanding basic mechanisms of adaptive behavior on the one hand and for designing applications and interventions within different disciplines in psychology on the other hand. However, not all studies have consistently shown beneficial effects of cognitive training and some questions that are critical for our understanding of plasticity are still unanswered. What are the key processes mediating training effects on laboratory tasks and in real world situations? Which characteristics of the training process and of the trainings situations mediate transfer effects? Are training effects subject to age-related changes? How are training-induced neural changes in the brain related to improvements in cognitive performance? How effective are training interventions in patients with specific cognitive impairments? To what extent can age-related cognitive decline be compensated by means of cognitive training? The focus of this Research Topic is on training-induced cognitive and neural plasticity across the lifespan. The goal is to provide a broad scope of state-of-the-art research in order to enhance our knowledge regarding the mechanisms underlying plasticity. We invite contributions applying behavioral, computational, and neuroscientific approaches, reviews, and theoretical contributions. Contributions are also welcomed if they focus on the implications of cognitive training in applied fields like educational and clinical settings as well as rehabilitation and training science.

Discovery of Grounded Theory - Barney Glaser 2017-07-05

Most writing on sociological method has been concerned with how accurate facts can be obtained and how theory can thereby be more rigorously tested. In *The Discovery of Grounded Theory*, Barney Glaser and Anselm Strauss address the equally important enterprise of how the discovery of theory from data—systematically obtained and analyzed in social research—can be furthered. The discovery of theory from data—grounded theory—is a major task confronting sociology, for such a theory fits empirical situations, and is understandable to sociologists and laymen alike. Most important, it provides relevant predictions, explanations, interpretations, and applications. In Part I of the book, "Generation Theory by Comparative Analysis," the authors present a strategy whereby sociologists can facilitate the discovery of grounded theory, both substantive and formal. This strategy involves the systematic choice and study of several comparison groups. In Part II, *The Flexible Use of Data*, the generation of theory from qualitative, especially documentary, and quantitative data is considered. In Part III, "Implications of Grounded Theory," Glaser and Strauss examine the credibility of grounded theory. *The Discovery of Grounded Theory* is

directed toward improving social scientists' capacity for generating theory that will be relevant to their research. While aimed primarily at sociologists, it will be useful to anyone interested in studying social phenomena—political, educational, economic, industrial—especially if their studies are based on qualitative data.

The International Baccalaureate - Alexander Duncan Campbell Peterson 1972

Beyond Individualism - George Rupp 2015-09-01

In many places around the world, relations between ethnic and religious groups that for long periods coexisted more or less amicably are now fraught with aggression and violence. This trend has profound international implications, threatening efforts to narrow the gap between rich and poor. Underscoring the need for sustained action, George Rupp urges the secular West to reckon with the continuing power of religious conviction and embrace the full extent of the world's diversity. While individualism is a powerful force in Western cultures and a cornerstone of Western foreign policy, it elicits strong resistance in traditional communities. Drawing on decades of research and experience, Rupp pushes modern individualism beyond its foundational beliefs to recognize the place of communal practice in our world. Affirming the value of communities and the productive role religion plays in many lives, he advocates new solutions to such global challenges as conflicts in the developing world, income inequality, climate change, and mass migration.
