Confronting Biopiracy - Daniel Robinson  
2010-02-24

'Biopiracy' refers either to the unauthorised extraction of biological resources, such as plants with medicinal properties, and associated traditional knowledge from indigenous peoples and local communities, or to the patenting of spurious 'inventions' based on such knowledge or resources without compensation. Biopiracy cases continue to emerge in the media and public eye, yet they remain the source of

considerable disagreement, confusion, controversy and grief. The aim of this book is to provide the most detailed, coherent analysis of the issue of biopiracy to date. The book synthesises the rise of the issue and increasing use of the term by activists and negotiators in the World Trade Organization (WTO) and the Convention on Biological Diversity (CBD), to form a critical understanding of the themes, implications and politics of biopiracy. Taking a case-study based approach, derived from interviews and fieldwork with researchers, government, industry, local farmers, healers and indigenous people, the author sequentially documents events that have occurred in biopiracy and bioprospecting controversies. Implications and ethical dilemmas are explored, particularly relating to work with local communities, and the power relations entailed. Detailing international debates from the WTO, CBD and other fora in an accessible manner, the book provides a unique overview of current

institutional limitations and suggests ways forward. Options and solutions are suggested which are relevant for local communities, national governments, international negotiators, NGO and interest groups, researchers and industry.

**Pisos Cerâmicos Antiderrapantes E/ou Antideslizantes?** - Eng. Simone Batista {shirá}  
2019-09-11

É comum ocorrência de escorregamento em

pisos cerâmicos caracterizados como antiderrapantes e/ou antideslizantes. Como possíveis agentes causadores destes acidentes, estão: irregularidades no pavimento, tipos de sujeiras e substâncias, formas de locomoção, formato dos pés, tipo de transeuntes, ou seja, aqueles que possuem alguma dificuldade de equilíbrio. Entretanto, outro fator importante é o baixo coeficiente de atrito entre o piso e suas diferentes superfícies de contato. Estas, quando sujeitas a uma face oleosa ou misturas viscosas, geram condições de maior ou menor atrito. Assim, tanto o consumidor quanto o comerciante nunca têm a certeza sobre o significado exato da inscrição AD nas embalagens de alguns pisos cerâmicos.
